AERI 2014 Information Desk & Collaboration Space

During conference hours, student volunteers will be available at the Information Desk in the 3rd Floor Collaboration Space at SIS. Students can answer your questions about the schedule, accommodations, technical support, and general questions about Pittsburgh. The 3rd Floor Collaboration Space will be open daily for AERI participants from 9am – 6pm.

About AERI

Funded by two four-year grants from the Institute of Museum and Library Services, annual week-long Archival Education and Research Institutes (AERI) are hosted by partner institutions. Past institutes were held at UCLA in 2009, University of Michigan Ann Arbor in 2010, Simmons College in 2011, UCLA in 2012, and University of Texas at Austin in 2013. The Institutes are designed to strengthen education and research and support academic cohort-building and mentoring. Institutes are open to all academic faculty and doctoral students working in Archival Studies, both nationally and internationally.

A second component of AERI is the encouragement of a larger and more diverse cohort of doctoral students in Archival Studies. For this, several funding opportunities have been made available. The Emerging Archival Scholars Program (2011-2015) provides up to six scholarships for minority students at the undergraduate and graduate levels who are considering a doctoral degree in Archival Studies to attend AERI 2014 as well as additional mentoring and research opportunities.

The goal of AERI is to advance the field of Archival Studies in the following ways:

- Create a dynamic community of researchers, teachers, and students to help mentor doctoral students and faculty in areas such as thesis writing, grant writing, publishing, and career development.
- 2. Advance curriculum development in Archival Studies.
- 3. Further current research development through presentations, posters, and workshop activities.
- 4. Foster interest in future collaborations both nationally and internationally.

AERI will provide a dynamic venue for archival researchers and teachers to interact in an intensive, collegial collaborative environment.

More information about AERI and the Building the Future of Archival Education and Research Initiative can be found at the central website: http://aeri.gseis.ucla.edu

AERI 2014 Organizers

The following individuals have helped with the planning and implementation of the AERI 2014 Program:

Program Committee

Jeannette Bastian, Professor, Simmons College
Joel Blanco-Rivera, Assistant Professor, Simmons College
Richard J. Cox, Professor (AERI 2014 Program Chair)
Patricia Galloway, Professor, University of Texas Austin
Anne Gilliland, Professor, University of California, Los Angeles
Alison Langmead, Assistant Professor, University of Pittsburgh
Eleanor Mattern, Doctoral Candidate, University of Pittsburgh
Ricardo Punzalan, Assistant Professor, University of Maryland
Kelvin White, Assistant Professor, University of Oklahoma
(Chair, Emerging Archival Scholars Program)
Elizabeth Yakel, Professor, University of Michigan

University of Pittsburgh Doctoral Students

James King
Lindsay Mattock
Eleanor Mattern
Heather Soyka
Tonia Sutherland

University of Pittsburgh School of Information Sciences Staff

Sharon Bindas, Manager of Personnel and Administration Marci Carrothers, Director of Constituent Relations Alexandra Cole, Director of Communications Debbie Day, MLIS Program Administrator JoAnn Kavalukas, Administrator, Pitt Partners Program Olena Sherbinin, Data Architect Susan Williams, Contracts and Grants Administrator

University of California, Los Angeles Staff

Ellen-Rae Cachola, Doctoral Candidate

AERI 2014-at-a-Glance

Monday, July 14

8:30 - 9:00	Continental Breakfast Bellefield Hall Lobby	
9:00 – 10:30	Plenary: Grand Challenges Bellefield Hall Auditorium

9:00 – 3:00	Field Trips	
4:00 - 5:00	Emerging Scholars Wrap Up Session	3 rd Floor Quiet Study SIS

AERI 2014 | Full Schedule

Note for paper sessions: Each session will be responsible for either selecting a chair or determining another method by which to run the session. Given that paper abstracts and participant biographies are available in the program, it is assumed that there is little need for lengthy introductions. Someone should be designated to moderate questions and responses in each session.

Abstracts and titles reflect the information provided by the participants as of 6/1/14.

Monday, July 14

8:30 - 9:00 | Continental Breakfast | Bellefield Hall Lobby

9:00 – 10:30 | Plenary: Grand Challenges | Bellefield Hall Auditorium

Chair: Eliot Wilczek, Simmons College

Chair: Heather Soyka, University of Pittsburgh Marika Cifor, University of California, Los Angeles Mario H. Ramirez, University of California, Los Angeles Stacy Wood, University of California, Los Angeles

Grand challenges are complex, multifaceted, and widely recognized fundamental problems with broad applicability and that require extraordinary breakthroughs and the engagement of multiple areas of expertise to address (National Science Foundation Advisory Committee for Cyberinfrastructure Taskforce on Grand Challenges, 2011). Recordkeeping is a fundamental infrastructural component of administrative, economic, scientific, technical, clinical, educational, governance systems, and evidentiary functions. It is also integral to key societal processes such as cultural and community sustainability, identity formation, reconciliation and recovery, and remembering and forgetting. However, the relevance of recordkeeping research and development to grand challenges has not been widely recognized.

Plenary sessions led by Sue McKemmish at AERI 2011 and 2012 began to identify ways in which such research might contribute to nationally and internationally identified societal grand challenges. A special AERI report, authored by an AERI working group, will be presented in this plenary. The draft final report (which will be disseminated to the AERI community in advance of the institute) outlines the need for such research and development, and provides examples of broad areas (e.g., organizational transparency and accountability, global health and well-being, peace and security, environmental sustainability, and human rights and social justice) where it might make important contributions and the kinds of research questions that might be pursued.

The presenters will review the rationale and contents of the report and discuss ways in which it is to be disseminated to other fields and funders engaged in grand challenge research. They will then solicit feedback from the audience regarding the report and plans and strategies for how it might most effectively be utilized.

10:30 - 11:00 | Coffee Break | Bellefield Hall Lobby

11:00 – 12:30 | Paper Session: Web Infrastructures | 3rd Floor Common Area SIS

Assessing University Archives Websites Through the Lenses of the Archival Reference Knowledge Framework

Jonathan Dorey, McGill University

This paper will present the results of the first of two phases of my doctoral work. The goal of phase one is to determine how we can operationalize the Archival Reference Knowledge (ARK) (Duff, Yakel, & Tibbo, 2013) framework to systematically investigate archives websites – that is the page or pages that together provide information about and access to archival records and the repository. To do so, we will gather quantitative data about all Canadian universities that have an archives website, in French and English (n=55).

One issue that relates to websites as an entry point into the collections rests with the ability to locate these websites. Subject access is still scant (Beattie, 1990; Beattie, 1997; Daniels & Yakel, 2010) and difficult, due to a lack of standardized controlled vocabularies and a lack of resources for archivists to provide such detailed level of description. Access tools such as finding aids (Yakel, 2002) too often don't fulfill the needs of users, when they are not simply too difficult to find online (Tibbo & Meho, 2001). A lack of education in archival terminology and practices forces users to rely instead on library education and library search paradigms, which skews their expectations of what they can expect from archival retrieval systems (Yakel, 2002). The ARK framework seeks to address many of these elements by articulating the types of knowledge needed to conduct good reference work and provide exemplary service to users. This phase will answer the following two research questions: how we can operationalize the ARK framework to systematically assess archives websites and what are the similarities and differences between English-language and French-language university archives websites in the context of the ARK framework?

A previous analysis of archives websites was performed (Bromley, 2010), based on the Archival Intelligence model. Archival Intelligence served as a basis to articulate the ARK framework. Bromley (2010) examined 30 American university archives websites and found that the three dimensions of the Yakel's (2013) Archival Intelligence model are either not fully addressed or not addressed in a systematic, unified way: a lack of user support makes it difficult for novice users to understand descriptive terminology, record formats, record organization, and/or which records are more likely to yield answers to their specific research questions. For this doctoral study, Canadian university archives websites will be analyzed using an adapted version of Bromley's coding structure. The structure which was previously broken down into the three dimensions of Archival Intelligence, will instead be remapped to the ARK framework.

The goal of this analysis is two-fold: 1) develop an assessment index for the evaluation of archives websites to determine their level of user support based on the ARK framework, and 2) identify exemplary features or websites that will be used in the subsequent phase of this doctoral study to better understand the expectations of first-year undergraduate students with regards to university archives websites.

Family Matters: Control and Conflict in Online Family History Production

Heather Willever-Farr, Drexel University

Millions of family history researchers (FHRs) are cooperatively building web-accessible archives filled with information and images pertaining to deceased individuals for personal use and for public consumption. Yet, we know little about how their production activities are coordinated and constrained by the different systems that support family history work. In this paper, I explore these phenomena through the lens of two different family history production websites: Findagrave.com and Ancestry.com's family tree archive. These sites of cooperative production have attracted tens of thousands and millions of contributors respectively, yet they embrace content standards, social norms, and models of editorial control that differ radically from the well-studied exemplar of Wikipedia. In this study, I investigated how Ancestry.com and Findagrave.com support production of historical resources through analysis of message boards and interviews with participants. I found that these sites are not only places for building public historical resources, but simultaneously serve as opportunities for public memorialization and familial identity construction. Notably, I found that contributors to these websites embrace the idea of familial oversight of biographical information in order to maintain high standards of quality, and they harbor a corresponding skepticism of the open editing practices that have become a hallmark of many open collaboration projects. While contributors wanted to control content about their own families and wanted restrictions on who could edit their family trees or memorials, their concern for these sites as a public resources evoked frustration with restricted editorial controls. Interviewees and forum posters were frustrated that poorly researched memorials and family trees could not be corrected unless the owner decided to edit the memorial based on their suggested corrections. This tension was exacerbated by the larger problem of inexperienced contributors contributing poor-quality content due to their lack of knowledge of good historical research practices.

These findings suggest that the large number of contributors that these sites are attracting may not be sufficient to sustain the long-term cooperative production of accurate family history resources for current and future generations. The need to not only attract participants, but enculturate them into the practices of a community has been recognized as a primary challenge for open collaboration systems. This often entails interactions among more and less experienced contributors; however, I observed that at times conflict over accuracy has pitted experienced, careful researchers against less experienced researchers who are viewed as careless. Thus, the very individuals who could be mentoring and teaching newcomers about good research practices are angry and lose patience with the restrictions and editorial controls on both Ancestry and Find A Grave. Many committed contributors want the content to be accurate but must rely on others to address inaccuracies and have few avenues to teach newly minted contributors good research practices. In conclusion, I discuss how my findings may inform system design for participatory spaces on archival websites, and explore how these findings may inform archival participatory practice.

Curation Through the Backdoor: Enabling Data Curation Capabilities in a Non-Archival Organization

Lorraine Richards Bornn, Drexel University

"Big Data" is the term used to describe the challenges arising from the ubiquity and ease of data collection and storage. Modern storage systems are increasing capacity at a non-linear rate. One of the fundamental reasons for focusing attention on big data is that there is significant concern about the validity and repeatability of the processes of scientific inquiry as the majority of activities become data centric. The reproducibility and peer review that has made science possible (and successful) for the last 500 years is at risk unless we build the capabilities to ensure that the scientific method can function as it moves nearly entirely into the realm of cyber-infrastructure.

The Federal Aviation Administration's William J. Hughes Technical Center (FAA WJHTC) is an agency that uses "big data" information resources in the course of large-scale scientific research. For example, a single scientific simulation can use more than two Terabytes of data, not including the documentation that provides necessary contextual information about the experimental processes and environment. I am currently the co-PI on a research project with PI Dr. William C. Regli; we have been working collaboratively with the scientists, engineers and program managers at the FAA WJHTC since May 2013 to develop and enhance current data sets and sources, develop metadata schema, and design a prototype technical architecture to establish an OAIS-compliant digital repository for the Tech Center, Drexel University, and future users of the scientific data and results. A key challenge of this project is that the FAA Tech Center has not previously engaged in digital curation or preservation as routine activities, although it uses big data in the conduct of its primary functions. In addition, metadata standards are nonexistent and data sources derive from a wide variety of external organizations, internal experimental procedures, and complex simulations created to answer specific National Airspace (NAS) guestions.

In addition to these digital curation challenges, however, the Tech Center now also faces a new set of requirements. In November 2013 the multi-agency Joint Planning and Development Office released Unmanned Aircraft Systems (UAS) Comprehensive Plan: A Report on the Nation's UAS Path Forward, a plan for bringing unmanned aircraft into the National Air Space. As a result of this plan, the FAA will need to accommodate a huge influx of new data and will need to collaborate more intensively with other geographically distributed agencies implementing the plan's overall goals, which will require widespread data sharing.

The Tech Center personnel are keenly aware that they need to improve their capacity to curate and preserve data for sharing and reuse, and that this curation must meet stringent requirements for authenticity, integrity, reliability, and usability – the four cornerstones of trustworthy digital curation.

I propose to present findings from our collaborative work building digital curation capabilities, metadata schema, and a prototype repository for the FAA WJHTC, focusing on the development of automated metadata within an environment that has no current support for metadata standards, nor any currently available enterprise taxonomy for its scientific research data.

11:00 - 12:30 | Paper Session: Theoretical Discourse in Archival Studies | 501 SIS

Transcending Epistemological Dichotomies

Kay Sanderson, Victoria University of Wellington

Over the past quarter century archives and recordkeeping discourse has been troubled by the presence of competing epistemological positions. During this period, critical theorists, often writing under a "postmodern" banner, have repeatedly and convincingly drawn attention to the subjective dimensions of records, the ways records are interpreted, and the actions that archivists and recordkeepers take on them. Nevertheless an objectivist tone persists in much of the discourse and practice continues, for the most part, to be tacitly embedded with positivist assumptions.

Although the presence of this epistemological dichotomy is frequently noted in archival science's literature, there have been few attempts to explore the spaces between traditional assumptions of empirical realism and the more nebulous ontological assumptions present in postmodern critical theory. On those occasions when the problem of epistemological dichotomies is discussed in the discourse, it is typically in relation to records and recordkeeping or archival practices, the matters that are traditionally of central concern to the discourse community. The concept of evidence, which in records continuum theory implicitly enjoys a position of equal importance to that of record, has been neglected in both traditional and continuum

discourse. A digital age focus on accountability coupled with the lingering presence of objectivist connotations in the *word* "evidence", has led too easily to claims that the *concept* of evidentiality has no relevance in relation to subjectivist concepts of record and problems of interpretation and meaning-making. Accordingly, evidentiality is marginalized and continuum theory is dismissed as fundamentally flawed.

In this paper I look at the intellectual tools which two philosophies of knowledge provide for transcending this troubling epistemological dichotomy. One of these philosophies of knowledge is critical realism, which was founded by Roy Bhaskar. The other is actor-network theory, which I discuss largely in relation to Bruno Latour's twenty-first century philosophizing about the theory. Both theories are concerned with the quality of knowledge. Each embraces an explicitly realist ontology, arguing that the nature of reality (of which a knowledge claimant is a part) determines how, and the extent to which, we can come to know reality. This philosophical paradigm challenges traditional epistemological assumptions by arguing that subjectivity is not, as Latour put it, a "property of the soul" but a state of mind that is constantly evolving and changing focus as a subject interacts with objects (including other subjects) in the world; and that objectivity is a stance that is always directed at discovering reality through observation of objects, but which acknowledges the presence of subjectivity, the partiality of perception, and the possibility of fallibility. These philosophies of knowledge open the door to the possibility of conceptualising evidence in a way that is consistent with the fundamental logic of continuum theory and relevant to personal records and research uses of records inherited from the past as well as contemporary recordkeeping and the accountability purposes served by government records.

Being Assumed Not to Be: A Critique of Whiteness as an Archival Imperative

Mario H. Ramirez, University of California, Los Angeles

Taking Mark Greene's recent *American Archivist* article, "A Critique of Social Justice as an Archival Imperative: What *Is* It We're Doing That's All That Important?," as its point of departure, this paper poses a critique of normative assumptions of race and class prevalent in the archival profession, and analyzes the concomitant resistance to the integration of social justice and the political. In the recent past, there has been an increasing emphasis placed on rethinking the role of archives and archivists, and the ways in which each reinforce unequal power structures and the manufacturing of distorted histories. This notwithstanding, Greene's article points towards a strain of resistance to self-reflexivity within the archives community, and, moreover, is emblematic of an inability to think critically about race, whiteness and sociocultural positionality that are supported by the escalating homogeneity of the profession. Using perspectives derived from archival theory, philosophy and political science, this paper will tease out some of the reasons for this resistance to the "political" and critical within archives, and the problematic implications of efforts to continuously assert the neutrality, if not objectivity, of archival space. It reflects on the ramifications of this latter phenomenon for the archival profession and how it helps reinforce social and political inequalities that curb nascent organizational efforts at diversity and inclusivity.

Derridean Influence: Archival Readings of Archive Fever

Robert Riter, University of Alabama

The evaluation, interpretation, and adoption of postmodern ideas by leading archival thinkers has been of significant consequence in expanding the boundaries of archival thought, and offering redefinitions of the principles, ideas, and concepts that this body contains. Archivists shaping this "postmodern turn" have offered additional interpretative lenses through which to view the role, function, and character of records and archives, the position of archival influence in shaping artifactual identity, and the social responsibilities of archivists. This construction of postmodern archival thought was the result of archivists' consumption (reading, interpretation, and explication) of postmodern texts. In order to understand this body of thought, and its genesis, evaluating the reception of canonical postmodern texts by archivists is required.

This paper offers a discussion and analysis of archivists' receptions of Jacques Derrida's *Archive Fever*, and its textual influence on archival ideas. This is a study of archival reading. The manner in which archivists read influences the form of the thought that is generated. A clearer understanding of how postmodern strands of archival thought were generated and constructed can be accomplished through this study of archival reading. During the mid 20th, through the early 21st centuries, the weight of *Archive Fever*, and the ideas it contained, began to be felt in the archival literature. Through a study of this early reading, the early architecture of postmodern archival thought and development can be identified, described, and critiqued.

Using the reception of Derrida's *Archive Fever* as a case, I will document a prominent episode of archival reception, and offer an evaluation of its historical and intellectual consequences. This is accomplished through clarifying and explicating acts of initial textual consumption, and the secondary archival consumptions that followed. Lastly, I will demonstrate the utility of methodologies from reception studies to the practice of archival history.

11:00 – 12:30 | Paper Session: Community Archives | 3rd Floor Quiet Study SIS

The Miracle: A Queer, Mobile Memory Project

Roderic Crooks, University of California, Los Angeles

The Miracle is an artistic and activist queer project begun in 2004. This article takes the form of a transcribed interview between the founders of the Miracle and a graduate student volunteer. The authors, all participants in The Miracle, describe the queer bookmobile/mobile archives project as an intervention that seeks to protest the loss of queer community spaces in Los Angeles and Oakland, to temporarily disrupt the progress of gentrification and its attendant displacement of poor and minoritized communities, and to "redistribute" knowledge, literature, and information. The purpose of the article is to describe the activity as a memory project centered in a particular community and to continue a conversation between minoritized community groups and the archival profession in the mode of X, Campbell and Stevens' 2009 contribution to *Archivaria*, "Love and Lubrication in the Archives, or rukus!: A Black Queer Archive for the United Kingdom."1 In our work and in this article, we recognize that certain aspects of our practice are incommensurable with archival theory and professional archival standards of description, preservation, or access, but argue that genuine community-based work cannot take place exclusively in the remove of official institutions. Our alternative model of redistribution aims to meet people in the city, in their places of work, and all manner of public and private spaces as a project of memory preservation and political protest.

The Memory Archive of the Puerto Rican Diaspora: A Case Study of the Puerto Rican Community in Holyoke, MA

Joel Blanco-Rivera, Simmons College

During the 1960s, a significant number of Puerto Ricans moved to Holyoke, Massachusetts searching for employment opportunities in seasonal agriculture. The Puerto Rican community continued to growth in Holyoke and today is the largest Latino group in the city (42% of the city population). After various generations, Puerto Ricans in Holyoke continue to celebrate their heritage and traditions. Why Puerto Ricans in Holyoke preserve their heritage?

This research project studies the collective memory of the Puerto Rican diaspora in the city of Holyoke and how this memory becomes an archive that preserves and transmits the group's identity. Employing methods of archival research and semi-structured interviews, I examine the history of Puerto Ricans in Holyoke and the ways in which they preserve and transmit their Puerto Rican heritage.

Since the late 1990s archivists have increasingly studied the relationship between archives and collective memory. This scholarship includes studies of how under represented communities create and use archives to construct their collective memories. This research project will contribute to this growing scholarship, and will add a theme that is not addressed in the archival literature: the collective memories of the Puerto Rican diaspora in the United States.

Building Community: Making Community Archives in Korea

Eunha Youn, Chonbuk National University

Since Public Records Act enacted 1999 in Korea, most of attentions were set on the public records management. The term 'record' referred only to legal documents. However, during the 2010s, private papers and other community collections began to be gradually recognized as records. This progress is influenced by Seoul city and the policy-makers. To revitalize urban life and to strengthen social network, the city designed several urban renewal projects including the creation of local communities, so called "Maeul". This brought people's interests into community records and memories. The presentation will briefly introduce the current community archives in Korea which are built by the top-down supports from the city.

11:00 – 12:30 | Paper Session: Archival Embodiment | 403 SIS

Archival Body/Archival Space: Queer Remains of the Chicano Avant-Garde

Robb Hernández, University of California, Riverside

This paper presents an interdisciplinary queer archive methodology I term "archival body/archival space," which recovers, interprets, and assesses the alternative archives and preservation practices of homosexual men in the Chicano Art Movement, the cultural arm of the Mexican American civil rights struggle in the U.S. Without access to systemic modes of preservation and beseeched by AIDS related loss, these men generated creative recordkeeping formations to resist their erasure, omission, and obscurity. Based on my book manuscript-in-progress, this paper foregrounds a series of archive excavations mining these "archival bodies" from buried and unseen "archival spaces," such as: domestic interiors, home furnishings, barrio neighborhoods, gay bars, and museum installations. This allows us to reconstruct the artist archive and, thus, challenge how we see, know, and comprehend "Chicano art" as an aesthetic and cultural category. As such, I expand the terms of "evidence" showing different documentation practices. The result of my findings shows a little known queer visual vocabulary in Chicano art and illuminates artist networks for homosexual Chicano cultural workers taking place throughout Southern California.

Principally, I will discuss the operations undergirding my queer archive fieldwork model: archival body ethnography, queer detrital analysis, archival space analysis, containers of desire, and archive elicitation. I posit that by speaking through these artifact formations, the "archival body" performs the allegorical bones and flesh of the artist, an artifactual surrogacy articulated through a compound of textual and visual layers and juxtapositions. My methodological innovation has direct bearing on how sexual difference shapes the material record and emphasizes the places from which these "queer remains" are kept, sheltered, and displayed. The custodians of these records questioned what constitutes an archive and document challenging the biased assumption that sexuality was insignificant to the Chicano Art Movement leaving no material trace.

The structure of my talk will briefly outline three recovery projects utilizing an Archival Body/Archival Space methodology, including: Robert "Cyclona" Legorreta (1952- present), Mundo Meza (1955-1985), and Teddy Sandoval (1949-1995). I argue that the restoration of these artists also reveals the profound symbiosis between this circle of artists, Chicano avant-gardism, and the burgeoning gay and lesbian liberation movement happening in Los Angeles at the time. My findings rupture the persistent heterosexual vision of

this period and reveal a parallel visual lineage, one that dared to picture sexual difference in the epicenter of Chicano cultural production.

A Queer/ed Archival Methodology: Re-imagining Temporalities to Challenge the Archive as a Body of Knowledge

Jamie Lee, University of Arizona

This presentation explores gueer/ed alternatives to the notions of 'fixity' and 'capture' as these both relate to the archival record and work to challenge the idea of the archive as a body of knowledge. Utilizing archival theory, performance studies, gueer theory, and the decolonial imaginary, I use my hands-on work within the Arizona Queer Archives to challenge notions of chrononormativity to move toward an alternative method to recovering lost histories and marginalized pasts, what Elizabeth Freeman calls erotohistoriography, a term that "can capture the centrality of pleasure, especially sexual pleasure, in queer practices of encountering and documenting the past." By asking how we might conceive of a record as dynamic and so contested, contestable, and radically open, I will explore varied approaches to temporality to challenge understandings of the archive as a body of knowledge constituted by a presumably static archival record. Such approaches push the boundaries of how archivists and archival theorists do or do not engage the changing nature of the record. Traditional practices can run the risk of reproducing normativities and social divisions in the name of dominant and/or singular versions of lived histories. As deployed here, queer will extend to archival practices, performances, and productions that are often excluded from what is considered 'proper' and 'legitimate' archives. This presentation rests on the assumption that developing a Queer/ed Archival Methodology (Q/M) can help to ensure that even complex, contradictory, and nonnormative histories and records have their places in society's records. Records in the queer/ed archive can, then, reflect voices and peoples in their everyday range of emotions, pleasures, desires, and experiences.

Conceptualizing an Archive as a Complex Adaptive System

Ellen-Rae Cachola, University of California, Los Angeles

This presentation will explain how the International Women's Network Against Militarism (IWNAM) is a complex adaptive archival system that manifests transformative events through uses of social, technical and 3-dimensional records. The term transformative draws from David Snowden's principle of complex adaptive systems, which is the idea of disparate elements of systems interacting and communicating, leading to shifts in the natures of each element.

Social records are defined as oral and kinetic records that exist within the "repository" of the body, and interpersonally as collective memory. Technical records are defined as the rendering of orally and kinetically produced information into externalized information objects, such as text on paper, faxes, mail and email, which are archived on websites, folders and file cabinets. 3-dimensional records are defined as landscapes, infrastructures and institutions that comprise the cities of Olongapo, Philippines and Bayview Hunter's Point as "archives." The IWNAM emulates a complex adaptive archival system through using a constellation of archives that bring people from different societies together to experience, share and document militarism as structural violence that generates interpersonal violence across differences. The design and experience of this information exchange facilitates shifts in consciousness and relationality that models possibilities for non-violent international relations.

12:30 – 2:00 | Lunch | *Litchfield Towers*

2:00 – 3:30 | Workshop: Continuum Conversations: Case Study Exploration of the Records Continuum Model | 3rd Floor Common Area

Chair: Joanne Evans, Monash University Chair: Sue McKemmish, Monash University Belinda Battley, Monash University Greg Rolan, Monash University Heather Soyka, University of Pittsburgh Narissa Timbery, Monash University

A visit by a US Study Abroad Class, led by Dr. Kimberly Anderson, to Monash University in July 2013 offered a rare treat for Australian Records Continuum scholars and practitioners. It provided a moment to step outside the theory and practice we are so deeply embedded in and reflect on how it appears to outsiders. The upshot was a fascinating discussion of the past, present and potential futures of continuum theory and practice, with agreement to look for opportunities to pursue further such conversations. Particularly to pick up the gauntlet laid down by Frank Upward and set the agenda for third generation continuum archival and recordkeeping research, education and practice.

This workshop aims to progress such reflective discussions, using a case study to explore facets and fractals of the Records Continuum Model. Let's face it – it is complex – as that is the nature of 21st century recordkeeping realities we have to deal with. It is also a sensemaking model, perhaps best understood when put in motion and used to reason through real life archival and recordkeeping situations. Through this, the Model and our understandings of it also evolve; in the case of the July 2013 workshop challenging terminology and questioning its visual representations.

After an introduction to the case study and the Records Continuum Model, led by Monash PhD students, breakout groups will be charged with exploring it from differing perspectives, namely:

- Designing a teaching module,
- Scoping out a research project,
- Developing a tool for communicating continuum concepts beyond discipline and professional boundaries.

Through these activities participants will develop understanding of Records Continuum concepts and share in the defining of the next generation agenda for its further articulation and development.

Case study

The case study will focus on the Maori Land Court/Maori Affairs records held at Archives NZ which date from the 19th and early 20th centuries. Over the last decade or so these have been selectively copied by Waitangi Tribunal staff and bound, together with other related records and published material, into the Raupatu Document Bank (http://www.library.auckland.ac.nz/subject-guides/maori/guides/maori_land.htm - RDB), now around 140 volumes, and used as evidence in land and other claims under the Treaty of Waitangi. Raupatu means, essentially, confiscation, and these records relate to land confiscated from Maori owners by the Crown. In addition, a searchable online database has been created from the Maori Land Court Minute Books (http://www.library.auckland.ac.nz/subject-guides/maori/quides/maori/land.htm#mlcmbi)

2:00 – 3:30 | Paper Session: The Imagined Self | 3rd Floor Quiet Study SIS

"Leaving the mouse on the left is the new leaving the tape in the VCR": Personal Archiving, Personal Information Management, and the "Pariah Industry" of Web Pornography, an Exploratory Study

Alex Poole, University of North Carolina Chapel Hill Sarah Ramdeen, University of North Carolina Chapel Hill

In personal archives, examples of collections usually include photographs, prized possessions and other materials that are important to the collector. Persons save such materials to record events, capture emotions or memories, or for future use. Though personal collections have expanded to include digital objects as well as analogue objects, these themes persist.

Conversely, why would persons choose to save illicit materials such as pornography? How do they learn to do so? How does this particular personal archiving activity fit into their larger personal archiving strategy? This paper will examine the ways in which persons manage pornography in personal digital archives. A popular website recently reported that pornographic sites earn more traffic monthly than Netflix, Amazon, and Twitter combined. Scholars must begin to take such PIM topics and the archiving practices implicated in them seriously. As Cal Lee and Rob Capra suggest, "the ARM and PIM research communities have a great deal to learn from each other."

A social news and entertainment site, Reddit is a curated list of links to news articles, videos, images, and other web-based materials. The site maintains submitted materials and discussion forums linked to these materials in which users comment on and discuss the posted items. Though each contributor logs in using a unique user name, her account remains anonymous unless she chooses to identify herself. Contributors earn "karma" (points) for their posts and comments, comments that are wholly open to the public. Conversations related to the management of pornography often appear—both in- and out-of-context—in discussion forums. In these conversations, issues related to PIM and archival management invariably emerge, even if contributors may not recognize them as such. This paper will cover topics such as evolving personal management practices related to digital as opposed to physical content, overcoming educational boundaries in order to maintain these collections, and discussions of attitudes related to these being "sensitive" as opposed to "typical" materials.

The Film Collector as Vernacular Archivist

Andy Uhrich, Indiana University, Bloomington

Specialized programs in moving image preservation have professionalized the field of film archiving over the last fifteen years. What was previously a skill gained through apprenticeship is now one requiring a graduate degree and participation in professional organizations. This has significantly benefited this subfield of archiving by crafting a set of common knowledge assuring employers that graduates of these programs are competently trained. However, it runs the risk of shutting off the occupation of moving image archiving from individuals who have gained skills by other means and alienating communities that do not participate in graduate education.

To consider this issue of disciplinary boundaries and participatory archiving in relation to film preservation this paper examines the practice of private film collecting, where individuals collect motion pictures, of various genres, on photochemical film stock. Film collecting has, in one form or another, been an ongoing activity since the origins of cinema and continues today in the post-film era of digital film production and preservation. It has been the shadow practice of institutional moving image archiving, offering new directions for the field – Henri Langlois' creation of the Cinémathèque Française in 1935, Rick Prelinger's focus on ephemeral films in the 1990s – while being seen as a source of piracy and uncontrollable cinephilia. With the end of film prints and the rise of a significantly more virulent form of illegal distribution through DVD and online piracy, film collectors have begun to go public as film preservationists. Individual collectors have received preservation grants from the National Film Preservation Foundation or crowdfunded digitization projects through Kickstarter; David Pearce's recent report on the state of silent film preservation records how a small yet significant percentage of extant silent films exist only with private collectors.

While being careful not to valorize a practice that at its extreme became secretive and possessive, this paper approaches film collectors as organic intellectuals for the purpose of reconsidering assumptions about the proper formation and implementation of institutional film archiving. It applies theories of the participatory archive from scholars such as Isto Huvila to the field of film archiving. How do film collectors, as a nonprofessional affinity group, practice film archiving differently than professional archivists? Should institutional film archives merely look at private film collectors as a source for rare prints or can the approaches of film collectors expand professional methods? For example, and though this is an ever changing target, what is the proper balance between access and preservation for archival films? How can institutional film archives balance an impulse to become more open to community involvement with a very understandable concern about protecting quickly degrading moving image artifacts? With the continuing challenge of limited budgets and a move by some large institutions to divest of analog holdings after digitization, does a more distributed form of archiving, where private individuals continue to protect media artifacts actually provide a more inclusive and sustainable model?

The Turn Inwards at the Canadian Lesbian and Gay Archives

Danielle Cooper, York University

Nestled within Ann Cvetkovich's groundbreaking, largely theoretical and metaphorical exploration of queer archives in *An Archive of Feelings* are some "actually existing archives" created by LGBT grassroots organizations, such as the Lesbian Herstory Archives and the ONE National Gay and Lesbian Archives. Cvetkovich cautions us to remember these LGBT grassroots archives' queer tactics in the wake of LGBT and queer studies popularization and the subsequent creation of institutionalized LGBT information collections. Yet, as new LGBT archives proliferate and already existing LGBT archives continue to evolve, it is also important to develop a more nuanced understanding of LGBT grassroots archives and how they have changed over time, queerly or not.

Founded in 1973 as a repository for the gay liberation newspaper *The Body Politic*, the Canadian Lesbian and Gay Archives is one of the largest LGBT archives in the world and remains primarily volunteer-based and entirely autonomous from other institutions and archives. Drawing from the CLGA's newsletters from 1977 to 1995, this paper traces the organization's changing orientation towards history and historicizing including: the figures and events the archive perceived as historically relevant, the historical methods and tactics the archive promoted and engaged in, and how the archive engaged with history as a scholarly discipline.

The CLGA newsletters reflect that the organization became increasingly depoliticized and distanced from history-making over time, partly because the archive separated from *The Body Politic* after police raids on both organizations and partly because the archive's growth led to a turn inwards, or, a focus on internal logistics and mainstream acceptance over broader historical engagement. For example, in the earliest issue of the newsletter in 1977 boldly stated: "where does one begin to search out such history? The answer is simply everywhere." By issue eleven in 1995, however, gay history's seeming overabundance had become a problem for the CLGA and the newsletter warned that "the rapid growth of the holdings, changing technology, and the increasingly diverse demands of researchers...have placed pressures on volunteers and on our funding base."

Drawing on Lisa Duggan's framework for evaluating the normalizing and mainstreaming of LGBT lives and communities, this paper positions the CLGA's evolving practices as constituting *archival homonormativity*. As the CLGA case demonstrates, archival homonormativity not only implicates what historical subjects LGBT archives collect and re-claim, but also how LGBT archives position themselves in relationship to history-making as a wider project. Casting a critical gaze on the values and assumptions conveyed in the primary documents of LGBT archives like the CLGA newsletters complicates dominant understandings of LGBT grassroots archives and demonstrates the necessity of historicizing organizations devoted to the LGBT past.

2:00 - 3:30 | Paper Session: Archival Representation | 501 SIS

Archival Description at the Twilight of EAD 2002: Community Usage

Sarah Buchanan, University of Texas at Austin

Encoded Archival Description (EAD) has provided repositories an encoding standard with which to express archival finding aids since its creation in 1993 and implementation beginning in 1996. As one measure of its widespread adoption by collecting repositories, consider that the nationwide corpus of ArchiveGrid currently comprises over 130,000 EAD documents (Jan. 2014). While the markup language currently in wide use in EAD 2002 is a Document Type Definition (DTD) based on XML, its earlier basis as EAD Version 1.0 (1998) was SGML, chosen expressly for its support of structured hierarchical relationships through tags. This spring, the archival community witnessed the official release of EAD3, a culmination of the work of SAA's Technical Subcommittee for Encoded Archival Description (TS-EAD) and Schema Development Team (SDT of the Standards Committee) that began with its charge in February 2010. As indicated in the previous alpha, beta, and gamma releases of EAD3, DTD itself is slated for retirement as the maintained schema language of choice, to be replaced by RelaxNG (with derivative XSD and DTD versions also available). These technical changes provide a background for understanding the current state and origin of archival finding aids authored in EAD, and how this data corpus may fare with introduction of a new version of the standard.

At this time of transition for archival description activities, archivists and archival institutions may be rethinking their prospective usage of the EAD standard as a communication medium for their collections. This research presents an overview of the types of institutions that currently provide collection descriptions in the open dataset of ArchiveGrid. An understanding of this community of contributors, drawn from a literature review and visual overview of archival institutional types, will help inform new approaches to EAD3.

Photographic Documents in Archival Fonds

Aline Lacerda, Fundação Oswaldo Cruz

The purpose of this study is to promote a methodological reflection upon the organizing system applied to the photographic records in the archives, be they personal or institutional. It covers such organizing systems at their key stages – appraisal, arrangement and description - associated with the specifics of the visual documents in the archive funds.

In my doctorate degree I analyzed the specificities of photographic registers in the archival context of production. With the title *The photographs in the archives*, the research seeked to investigate how photographs has been treated by archival science and focused on the nature of photographic medium and its use as an archive document.

The main goal of my paper is to discuss how archival principles and theories are challenged by photographic documents and to present some reflections upon the methodological stages of identification, arrangement and description of these materials by the light of the contextual aspects of the production of the image, instead of observation mostly their content aspects.

3:30 – 4:00 | Coffee Break | 3rd Floor SIS

4:00 - 5:30 | Paper Session: Archival Standards | 403 SIS

Exploring Archival Standards within the Sociology of Knowledge

Zack Lischer-Katz, Rutgers University

This research examines the construction of knowledge within archival communities, particularly in relation to the development of standardized practices and techniques. Taking the controversial JPEG2000 standard as a case study, this research looks at how knowledge claims and the construction of evidence used to support those claims have been discursively constructed within the video preservation community. To conduct this research, 433 discussion board postings from the Association of Moving Image Archivists Listserv were collected from the years 2000-2013 and analyzed using Reiner Keller's Sociology of Knowledge Approach to Discourse. The findings of this research help to identify the dominant interpretive frames and epistemic techniques that shape knowledge around JPEG2000. In addition, this research suggests the efficacy of examining discourses on archival standards as a means to explore the social epistemology of archival communities. This type of research into the shaping of archival knowledge helps to articulate the cultural and historical specificity of archival techniques, which provides essential information for future scholars seeking to understand the ways in which archival techniques shape collections.

Measuring User Conceptions of Trustworthiness for Digital Archival Documents

Devan Donaldson, University of Michigan

Trust is the most fundamental but perhaps least well understood property of digital repositories that hold and preserve archival documents. For at least fifteen years, information scientists, digital curators, archivists, and computer scientists have worked successfully to design and construct robust, standards-oriented storehouses for digital archival documents. As these digital repositories scale in size and complexity, they are becoming essential sources for increasingly diverse populations of users, ranging from scholars, students, government and corporate administrators, investigators from the private sector, genealogists, and the general curious public. Scholarship across multiple disciplines has demonstrated that trust in a digital repository tends to originate with organizational branding, surrounds and envelops the "control zone" of the managed digital space, and so resides primarily at the collective level of the repository.

In spite of its conceptual centrality, little research has investigated trust of the documentary contents of repositories as conceived by the designated communities of users that the repository is intended to serve.

This presentation focuses on the second part of a two-phase, mixed-methods investigation into user conceptions of trustworthiness for archival documents housed in a large, heterogeneous, government-run digital repository. Via semi-structured focus group discussion, Phase One involves eliciting perspectives on trustworthiness from genealogists who regularly utilize documents preserved by the Washington State Digital Archives. Utilizing thematic analysis and micro-interlocutor analysis to examine interview transcripts and video recordings, findings specify the sub-elements of a multi-faceted conception of trustworthiness, including: accuracy, authenticity, believability, completeness, currency, first-hand or primary nature, form, legibility, objectivity, stability, and validity. Phase Two, the focus of the presentation, includes constructing and testing the Digital Repository Document Trustworthiness Index (DRDTI), which is grounded in perceptions of trustworthiness identified as a result of Phase One. The DRDTI can help digital repository managers identify which facets of user document trustworthiness perception relate to curatorial responsibilities. Equipped with this knowledge, digital repository managers can further refine their services in ways that engender and sustain trust.

Beyond Textbooks: Primary Sources and Inquiry-Based Learning in K-3 Classrooms

Patricia Garcia, University of California, Los Angeles

With the widespread adoption of the Common Core State Standards, many K-12 educators are faced with the task of developing innovative teaching strategies that will meet the new standard requirements. One effect of the new adoption is the requirement that educators utilize primary sources as tools to promote inquiry-based learning. The pressure faced by educators to adhere to the new standards *coupled* with a lack of practical and pedagogical knowledge on how to best approach integrating primary sources into classroom instruction has created a need for archival studies scholars to closely examine the practices and needs of educators in order to improve archival services and establish effective collaborations between educators and archivists.

This presentation will present preliminary findings from twenty semi-structured interviews and a nine-month participant observation study that focused on analyzing the relationship between inquiry-based educational practices and the critical thinking skills that are fostered through the instructional use of primary sources. While previous research has explored how primary sources may be used as "support" tools in social studies curriculum, this study situates primary sources as essential and fully integrated instruments of learning and focuses on understanding the role that primary sources can play in promoting inquiry-based learning in STEM fields, such as science and math. Ultimately, the study is designed to collect and analyze qualitative data that will assist *both* the archival studies and education fields develop professional practices that will ultimately lead to the effective use of primary sources as instructional tools.

4:00 – 5:30 | Paper Session: Information Infrastructures | 3rd Floor Quiet Study SIS

Augmenting Humanities Scholarship by Applying New Linking Technologies to Archival Description

Amalia Levi, University of Maryland

Digitization of archival holdings has greatly enhanced humanities scholarship. At the same time, the impossibility of digitizing everything, or in ways that make them machine readable, the practice of describing at the aggregate level, and the lack of interoperability among institutions are still factors that impede big data humanities research.

Archivists have joined librarians and museum curators in exploring and applying Linked Open Data as one of the ways to overcome these limitations. Current applications however are being targeted at the metadata level, while most information about the content and context of archival holdings can be found in archival description as natural language free text and thus is not computationally malleable.

Recent research in archival literature has recognized this problem and explored the usefulness of applying entity recognition and linked open data as a way to enrich and augment archival description by opening it up to the Linked Open Data cloud and other external knowledge bases.

During the same time, computer scientists have been developing technologies for the automatic extraction of entities and relationships, and construction of knowledge graphs that can have ground breaking implications for cultural heritage institutions and humanities research at the infrastructural level. Currently however the applicability of such technologies has been tested on datasets that satisfy computer science's need for volume and testability, but do not reflect the subtleties and challenges of archival material. Furthermore, these technologies have been developed without taking into consideration the perspective of humanities scholars as the end users, and subsequently this gives rise to questions regarding the validity and authoritativeness of the knowledge bases used.

This study re-conceptualizes archival collections as knowledge bases to be consulted and linked to, rather than as static objects in need of enrichment. It suggests that today it is possible to achieve this by applying machine reading technologies to archival descriptions. It also suggests that in order for such technologies to better serve the users of such collections (scholars and archivists), their perspective and research practices need to considered and incorporated at the infrastructural level.

This study will utilize as case studies dispersed collections of material in US and European archives that conceptually belong together and are used by historians conducting transnational history. In order to test the above premises a test dataset from these collections will be created, and through interviews and surveys with computer scientists, humanities scholars, and archivists, the applicability, feasibility, and desirability of machine reading technologies for the construction of knowledge graphs out of these collections will be examined.

The research questions to be explored are: How do computer scientists perceive the applicability of machine reading technologies to archival collections? In which ways does the application of such technologies allow us to see archival holdings as knowledge bases? How do humanities scholars and archivists perceive the usefulness of these techniques in their research and work processes?

This presentation will outline the theoretical background of the research, and will discuss the methods to be employed. This is ongoing research pertaining to my dissertation.

Data Sharing and Reuse in the Sciences: An Investigation of Infrastructure Factors

Angela Murillo, University of North Carolina at Chapel Hill

Data sharing and reuse in the sciences has been a topic of growing attention over the last several years. This attention stems from changes that are occurring within scientific practices driven by the data deluge (Bell, Hey, & Szalay, 2009; Hey & Trefethen, 2003), fourth paradigm data-intensive science (Hey, Tansley, & Tolle, 2009), and changes in journal and grant agency policies (National Institutes of Health, 2003; National Science Foundation, 2010). The sharing of data provides the ability to extract additional value from data, avoid reproducing research, enables researchers to ask new questions of existing data, and advance the state of science in general (Borgman, 2012). These potential opportunities of data sharing and reuse have placed pressure on the scientific community and funding agencies to provide infrastructure solutions for the changes occurring in scientific practice

To address the above, in 2007 the U.S. National Science Foundation announced a request for proposals for Sustainable Digital Data Preservation and Access Network Partners (DataNet). The DataNet Partners were created to develop long-term sustainable data infrastructures, interoperable data preservation and access, and cyberinfrastructure capabilities (National Science Foundation, 2006). The Data Observation Network for Earth (DataONE), one of the initial DataNet Partners, provides cyberinfrastructure for open, persistent, robust, and secure access to well-described and easily discovered earth science observational data" (DataONE, 2013). Scientists participating in DataONE are able to deposit, search, and reuse data available through the various DataONE tools.

The majority of studies specific to DataONE have addressed: the organization and the infrastructure, specific tools that the DataONE has created, and the DataONE community. Additionally, the majority of data sharing literature have addressed: general reasons why scientists should share data, journal and grant policies that influence data sharing, behavioral aspects that influence data sharing, and have been conducted in the biological sciences. As there have been few evaluations of the DataONE, it is timely to evaluate the cyberinfrastructure progress. Furthermore, as the DataONE focuses on earth science data, this provides an environment for studying data sharing within the earth sciences. The proposed research recognizes specific gaps in the literature: (1) the need to evaluate the DataONE cyberinfrastructure progress, (2) the need for studying how this infrastructure impacts data sharing, and (3) the need for studying sharing in the earth sciences.

From the above research problem, specific research questions have been developed including:

- Within the DataONE environment, what infrastructure and interoperability factors facilitate or inhibit data sharing and reuse?
- Within the DataONE ONEMercury, which results are deemed relevant for reuse? What properties of these data and metadata facilitate or inhibit reuse?

In order to address the above, the researcher has proposed a mixed method approach including a review of transaction logs of the DataONE search interface – ONEMercury, a quasi-experimental study, a survey of the DataONE community asking them about their sharing and reuse activities, and follow up intensive interviews. This paper presentation will provide an overview of the research problem, research questions, methodology and proposed time-line for the researcher's planned dissertation.

Understanding Digitization Partnerships Between State Archives and the Private Sector Adam Kriesberg, University of Michigan

Access to public records is a foundational pillar of democracies, dependent upon strong archival institutions at all levels of government. My dissertation examines the recent expansion of public-private partnerships involving US state archives and their effects on citizens' access to digitized materials. It focuses on the ways in which government archives and libraries in US states and territories engage with the private sector on digitization project for records such as state census, birth, death, agriculture, land ownership and use, and other events central to life in a democracy. This increase in partnerships involving publicly-funded cultural heritage institutions presents a research opportunity. The implementation and effects of these partnerships have not been documented and incorporated into the archival research community beyond the level of individual case studies. Through a mixed-methods social science approach, this project seeks to understand how these partnerships form, how they are negotiated, managed, and how they end. It further examines how digitization through partnerships affects public access to records. The results draw upon interviews with individuals working in both the public and private sector who are involved with negotiation and management of partnerships as well as a survey that combines original data with historical data collected by the Council of State Archivists (COSA). In this presentation, I present preliminary results from

the study, focusing primarily on a set of interviews with employees of private sector firms and on the survey data.

4:00 – 5:30 | Paper Session: Open Government | 501 SIS

Open Government/Closed Records: Information Asymmetry in the Study of Access to Information

James Lowry, University College London

In 1919, Kafka's parable, Before the Law, presented an analogy of the relationship between the individual and the state, which is characterised by an imbalance of power arising from what, in economics, after Akerlof's 1970 paper The Market for Lemons: Quality Uncertainty and the Market Mechanism, is called 'information asymmetry', where one party in an interaction has more accurate or complete information than the other. In Kafka's parable, 'the man from the country' allows himself to be denied access to the law by, firstly, legitimising the law by attempting to access it, secondly, legitimising the gatekeeper's authority by accepting his prohibition to enter the open door on the basis of his claim to authority and suggestion that more powerful gatekeepers wait inside. The veracity of the gatekeeper's authority and the reality of what is behind the door are unknown to the man. Evidence that the protection of information – the maintenance of information asymmetry - is a common means by which states, companies and individuals protect (or project) power over others is easily to be found in studies in the fields of sociology, political science and continental philosophy, inter alia. Histories of Freedom of Information in Britain are rich with observations of bureaucratic resistance to the release of information. In 2011, the Open Government Partnership (OGP) was established as a vehicle to support and promote transparent and accountable government internationally. The discourse around the OGP suggests a widespread interest in redressing the imbalance of power between governments and people, with a focus on service delivery and the protection of individual rights. The movement towards government openness has spurred new approaches to promoting government transparency and called into question the effectiveness of existing approaches, such as Freedom of Information. However, the persistence of the use of pre-existing secrecy and security measures has not been examined in this context. Despite the high profile of the openness movement, very little attention has been given to the laws, policies and practices that continue to be used to restrict access to information, for instance Official Secrets legislation, the Lord Chancellor's Security and Intelligence Instrument, the Defence Notice (D-Notice) system (official requests not to publish or broadcast on matters of national security), protective marking policies, and established practices on the closure of government files (such as the 30 year rule). These impediments to access are unknown to most people seeking information from government. In what ways are they still used to limit access to information and how effective are Freedom of Information and other openness measures while these impediments exist?

Case Study: How United Nations Operation in the Congo (UNUC) Communicate Using a Particular Genre as Medium of Communication

Benedicta Obodoruku, Long Island University

This case study is an exploratory study that examined the United Nations Operation in the Congo (UNUC). This study looked at various genres of communication such as: cables, memos, telex, telegraph, letters-outgoing correspondence, and incoming correspondence that the UNUC used as the medium of communication to manage and organize in the field. This research study applied JoAnne Yates's framework of genres in *Control through Communication: The Rise of System in American Management* and several theorists. Genres could be stretched to "nonliterary discourse to refer to types of communication that have similar formats and purposes" (Yates 1989, p. 288). Yates' definition of genres indicated that a

genre could be stretched to "nonliterary discourse to refer to types of communication" (Yates 1989, p. 288), which ties in with various genres of communication applied in this study. Communicating across distance could be difficult, especially, when communicating across the globe. The UNUC in the Congo communicated from New York, and across Europe to Congo [in African] during the Congo war from 1948 to 1973. UNUC used several genres of communication to overcome the barriers in distance communication and carry out the organizational and managerial procedures. This study used observation and content analysis methods to observe, review and analyze several genres of incoming and outgoing correspondences of UNUC Officer—in-Charge Sture Linner's cables from 1961-1962 to identify various communications that the UNUC used in the field in Congo. UNUC Officer—in-Charge Sture Linner's cables from 1961- 1962 fond S-0604 were reviewed at the UN Archives Records Managements Sections (UNARMS) in New York City U.S.A.

According to the findings of this study 80% of cable genres including Top Secret cables were major medium of communication used by UNUC and stakeholders in the field on administrative, political and financial issues. UNUC and Chief of Defense used 20% genre memos on arm shipments, immigration, aircraft safety, and internal communication.

Toward an Evidential Paradigm for Metadata

Stacy Wood, University of California, Los Angeles

In late 2013, The Guardian began publishing a series of leaked documents, given to them by a former contractor for the National Security Agency, Edward Snowden. A frenzy ensued, and media outlets were saturated with attempts to understand and interpret both the documents and their consequence for publics both within and outside of the United States. One of the initial revelations was the existence of PRISM, a massive data gathering and surveillance program. Exposed through a series of internally circulating PowerPoint slides, the program reached beyond public borders to include corporate metadata and infrastructure. The slides effectively pushed metadata as both category and content into the public sphere. This sudden appearance of metadata requires persistent definitional work within a multiplicity of contexts, but the most common deferral is the colloquialism "data about data." However, the most staunch defenders of the PRISM program rely on a definition of metadata that leaves us with a paradox. Somehow metadata is simultaneously not content and therefore implicitly a subject of no import on an individual level as well as a valuable source of intelligence worthy of propping up an expensive and now scandalous mass surveillance program. Metadata in this instance is being collected as a specific manner of evidence, produced as part of larger intelligence gathering activities, justified by its relationship to a set of networks devoted to safeguard from terrorist activities. Metadata as evidence however, is neither settled or obvious. In order to begin to understand metadata's current evidentiary value, we must set it in motion within the context of historical-juridical definitions of evidence that make up the foundations of evidentiary value itself. Employing Carlo Ginzburg's concept of "evidential paradigms" and archival theory regarding value, this paper explores what an evidential paradigm of metadata might look like. In his construction of "evidential paradigms," Ginzburg uses psychoanalysis, art criticism and fiction to bring an emergent paradigm of evidence that permeated and defined much of the nineteenth and twentieth centuries. This paper will similarly employ a range of cultural products including fictional representations, legal precedent and rhetorics of "big data."

6:00 – 8:00 | Opening Reception | 3rd Floor SIS

Sponsored by the University of Pittsburgh Library System

8:30 – 9:00 | Continental Breakfast | Bellefield Hall Lobby

9:00 - 10:30 | Plenary: Diversity | Bellefield Hall Auditorium

Chair: Kelvin White, University of Oklahoma AERI Emerging Archival Scholars

Over the past two years, the Emerging Archival Scholars Program (EASP) has recruited minority students at the undergraduate and graduate levels to consider undertaking doctoral education focusing in Archival Studies. Our goal has been to stimulate and begin to nurture the growth of a new and more diverse generation of scholars who are versed in interdisciplinary research that addresses issues in Archival Studies, broadly conceived. This plenary will present the views of past and current EASP participants on issues of diversity and archives from each their perspectives.

10:30 – 11:00 | Coffee Break | Bellefield Hall Lobby

11:00 – 12:30 | Paper Session: Affective Archive | 3rd Floor Common Area SIS

Visceral Forces: Introducing Affect Studies to Archival Discourse

Marika Cifor, University of California, Los Angeles

Over the last few decades practicing archivists and archival studies scholars have begun the vitally important work of expanding the archival field in order to critically address and document a more diverse set of social and cultural concerns that better reflect the world around us. Though significant progress has been made in opening conversations in the field about concerns including race, gender, class, and other issues of social equity and justice there are significant gaps remaining to be addressed in terms of turning these notions into new and innovative epistemologies for archival studies. My paper will address these gaps by introducing concepts, practices, and frameworks from affect studies into the conversation. This work will open up new theoretical and practical possibilities and develop new frameworks in the archival field that better reflect a broader social consciousness and underdocumented realms of human experience.

The study of affects, "those visceral forces beneath, alongside, or generally other than conscious knowing that can serve to drive us toward movement, toward thought," and ever- changing forms of relation has become a burgeoning area of interdisciplinary scholarly inquiry in recent years. In service of the development of new epistemologies and methodological toolkits I will introduce the context, terms, and critical emphases of affect studies to the theoretical, professional and cultural components of archival discourse. Drawing on theoretical and applied literature on affects from anthropology, cultural, gender, queer, and critical ethnic studies my paper will begin by introducing affect studies and its critical texts to a new audience. The theories, applications, and broader concepts presented in my paper will serve three significant purposes. First, to demonstrate clearly and effectively the compatibility between affect studies and the literature, foundations, and debates within archival discourse. Second, it will examine the important interventions that affect studies can make to the ways in which archives and ancillary information types and domains are studied, documented, and taught in both academia and professional practices. I will use affect studies to illustrate the need for an archives that contains and is shaped by affects. Traditional archives and their records offer insufficient means for documenting the significance of the affective concerns of identity, place, spirituality, love, intimacy, sexuality, trauma, and activism to human experience. Additionally, the

radical possibilities opened by exposing the affective experiences of using archives and of doing archival work will be examined. Finally, introducing affect studies into the archival field is an integral part of reinventing the field to create spaces for a critical social consciousness as part of working towards achieving the cultural, memory, and accountability missions of our field.

Records and Recordkeeping Practices in the Aftermath of Ethnic and Religious Conflict: A Study of Agency and Affect in Contemporary Croatia

Anne Gilliland, University of California, Los Angeles

Although extensive work has been undertaken at national and international levels addressing the role of archives and recordkeeping in tribunals and reconciliation efforts in the aftermath of wars and other violent conflicts, little research within the archival field itself addresses or seeks to understand the ongoing impact of archives and recordkeeping on the immediate lives of individuals and communities seeking to recover and establish transparency after such conflicts. Nor has research looked at any specific implications there might be for records, recordkeeping and archives in regions historically dominated by or recovering from ethnically and religiously oriented divisions and strife, and how these might manifest themselves within records, metadata and recordkeeping practices. My research addresses these lacks, examining the agency and affect of records and archives on individual lives in Croatia (and by extension, in the diaspora of those who left the region) in the aftermath of the Yugoslav Wars. It takes Akhil Gupta's theory of structural violence and extends it to situations in which bureaucratic recordkeeping perpetrates violence in situations of ethnic and religious divisions, often long after any physical conflict has ceased. In concert with Gupta's ideas, it is hard to point to a single agent or system that perpetuates structural violence precisely because it is systemic. Perhaps more important in terms of mitigating it, the structural violence can also be transparent to those who are not its victims.

This paper will report on ethnographic and archival components of this research that are exploring:

- the effects of records, recordkeeping, recordkeeping metadata and archives on people's daily lives
- how people feel about records and recordkeeping processes
- the "stories" people tell about records:
 - o Are there common themes and tropes?
 - o Are there certain kinds of records that are particularly central to these stories?
- how people react to the classifications and assumptions imposed by records
- are people aware of "codes" embedded in records as they are in social relations? If so, do they
 overtly read for, or subconsciously respond to them?
- what, if any contact have these individuals had with archives? What feelings or reactions did such contact engender?

"Make Yourself at Home": Strategic Actions and Sustainability at Four Lesbian and Gay Archives

Rebecka Sheffield, University of Toronto

My research involves a multiple case study that looks at the trajectories and strategic actions at four community-led lesbian and gay archives. These are the Canadian Lesbian and Gay Archives (Toronto), the ONE National Gay and Lesbian Archives (Los Angeles), the June L. Mazer Lesbian Archives (West Hollywood), and the Lesbian Herstory Archives (Brooklyn). This project uses social movement theory to investigate the how these organizations were founded, the ways in which they have sustained themselves over the years, and the strategies they have used to acquire and manage limited resources. The study of

lesbian and gay archives (and, indeed, all community-based activist archives) is enriched by social movement theory because this framework highlights the ways in which these organizations manifest social movement ideologies and goals.

This paper, if selected for inclusion in the 2014 program, will report early findings of my dissertation research. Preliminary analysis suggests that these four lesbian and gay archives experience common challenges, but each has managed its resources in different ways and with varying levels of success, dependent on geographic, socio-historical, and ideological contexts. Interviews with archivists, volunteers, and community partners also indicate that these archives initially attracted investment from local communities because they served as social spaces, providing volunteers with a place to contribute to collective action for social change. The ways in which people have come to the archives and what has kept them involved has implications for attracting new investment from younger generations born after the gay liberation movement in very different socio-political environments. This study also supports Stevens, Flinn and Shepherd (2010), who found that community-led archives are under considerable pressure to "hand over" their collections to academic institutions. The ways in which each case has negotiated this pressure and the relationships they have pursued with academic institutions suggest new avenues for engagement between universities and community-led archives that diverge from traditional custodial agreements.

11:00 – 12:30 | Paper Session: Material Culture and Archives | 3rd Floor Quiet Study SIS

Making Architecture: A Socio-Technical Examination of Artifacts

Katie Pierce Meyer, University of Texas at Austin

A story of contemporary architecture is one of making things – making places, making buildings, making drawings, making models, making decisions. It is a messy story with a lot of actors, only some of who are architects. Architecture is a social practice that extends beyond the walls of any firm, to collaborators within the field, to clients with particular expectations, to government officials making decisions about building code, to tool designers aiding in design and construction processes, to the artifacts created through the application of those tools. Each of these actors plays a role in the history of architecture and the construction of the built environment.

In this paper, I will focus on the artifacts that are created through the everyday activities of an architectural firm – drawings, models, specifications, contracts, spreadsheets, writings, membership documentation, sketches, and notes, to name a few – as the material culture of practice. Architects construct knowledge and communicate their expertise through such artifacts, which can tell stories about the architect's vision; the design iterations of the development team; working relationships among architects, clients and collaborators; and decisions made throughout the process of design and building. These artifacts are not yet records; it has not yet been determined that they have enduring value. But judgments take place everyday about what to keep from the negotiations of architectural practice. Making informed decisions about which artifacts to preserve requires understanding how they are made and what their roles are in everyday practice. I am operating from the position that architectural records are valuable sources of information that document the built (and unbuilt) environment and the social history of the communities in which they are created.

Drawing on my own ethnographic research, theory from science and technology studies, human-computer interaction, sociology, and computer supported collaborative work, and studies on the archival preservation of architectural records, I am working to develop a research methodology for investigating the complexity of architectural practice. By examining architectural practice as a socio-technical framework, it is possible to make a contribution to preservation literature that takes into account the changes in architecture. Close

situated study of contemporary architectural practices can further illuminate the role of artifacts in the messy doing and making of architecture. The socio-technical nature of building culture means that the artifacts to be preserved are being created via complex arrangements of people and technologies. It is not merely the technological changes that need to be addressed in order to preserve architectural records, but the social environment in which they are created, if we are to document architectural practice.

Challenges to Institutional Born-Digital Institutional Archiving: The Case of an International Art Museum

Anthony Cocciolo, Pratt Institute

In the field of archival studies, there has been growth in the literature related to born-digital archiving. Notable informational and educational resources include the "AIMS Born-Digital Collections" report, SAA's Digital Archives Specialist (DAS) curriculum and the BitCurator project. One commonality shared by these projects is an emphasis on donation-based collecting, where an archives or special collection needs to confront obsolete born-digital media or file formats included with a donation. Although this problem too confronts institutional archives, it is only a small facet of the entire born digital archiving challenge. This paper will explore the challenges to born-digital institutional archiving through the case study of a major international art museum.

Born-digital institutional digital archiving refers to the task of selecting, preserving, and providing access to the born-digital documentation created by an institution with historic and legal value. In this case study, the researcher studied the born-digital archiving practices of a major international art museum headquartered in New York from September 2013 through January 2014 with the goal of helping them plan for a born digital archives. The researcher studied the digital record keeping practices at the institution using three data sources:

- Staff: The researcher interviewed staff in 26 departments with 81 individuals attending an interview
 session. During these interviews, he asked questions related to the locations and formats of
 electronic records with permanent value, which can be identified using the institution's records
 retention schedule.
- Network File Storage: The researcher used the tool TreeSize to study the types of files and the age
 of files stored in departmental network share drives.
- 3) *Media in Archival Storage:* The archives contains approximately 7,000 cubic feet of paper records, with some media such as floppy disks contained within these boxes. He searched processed and unprocessed collections using inventories and finding aids available.

From studying these three sources of born-digital records, the researcher identified a number of challenges to institutional born-digital archiving. A small selection of these challenges is outlined below:

- Digital records are stored primarily on network file storage. Staff generally do not transfer electronic records to the archives because of lack of established procedures, workflows or infrastructures for doing so.
- 2. Because electronic records do not occupy valuable physical workspace, staff have little motivation to identify records for permanent retention based on the departmental records retention schedule.
- 3. Some departments with extensive collections of older records view these collections as "archives" of their department's work, and exhibit a somewhat proprietary attachment to them. However, they are not sure if they can be accessed because they may originate in obsolete file formats.

- 4. Many departments have records in obsolete file formats (e.g., WordPerfect, Quark XPress). However, since these files are rarely if ever referenced and are not barriers to completing work, this issue is not a priority for any department.
- 5. Additional challenges related to unexpected file formats, removable media, email, social media, cloud services, web archives, and specialized database software will be discussed.

Records as Museum Artefacts: Archival Material in Museum Exhibition

Tamara Stefanac, University of Zadar

To what extent can the virtual replace the physical in a museum exhibition? What are the features that the original holds which can enchant the visitor? This research focuses on the visitor's experience of displayed archival items. It examines the circumstances in which an archival item becomes a museum artefact. In commemoration of the centenary of the First World War, the Croatian Railway Museum is putting on an exhibition in virtual space on the Internet and its counterpart with the same archival items and museum artefacts, but in their original material form in the physical space of the museum. It is assumed that visitor reactions will vary and that with the ethnographical observation of reactions to the original of both types of visitor (virtual and physical) and the distributed questionnaires, a data set will emerge which could explain the strong and weak sides of both types of exhibitions. The planned exhibition will be built to incorporate different types of archival material that in the museum setting will take on characteristics usually associated with museum artefacts. The design of the virtual exhibition will include multilingual facets, multimedia and 3D modeling, and its counterpart in physical space will be presented in a traditional fashion behind glass, accompanied by a short description. The central hypothesis of this research is that original artefacts in physical space have some characteristics that are more appealing to the visitor and that the visitor achieves a deeper connection with displayed archival items rather than with their digitized forms presented through all the advantages of contemporary technology. The main goal of this research is to comprehend visitor reactions and more specifically to analyse and describe visitor rational and emotional reaction toward the same cultural artefact but displayed in different forms.

11:00 – 12:30 | Paper Session: Social Media | *501 SIS*

Trustworthy Digital Photographs Accessed and Stored in Social Media Platforms

Jessica Bushey, University of British Columbia

The widespread use of social media platforms for storing and accessing digital photographs raises a number of questions regarding the roles and responsibilities for managing and preserving image collections held within the commercial online environment. Accepted by members of social media services as repositories, these online treasure-troves of visual culture are actually for-profit businesses that rely on cloud computing infrastructure to provide seemingly limitless storage and rapid provisioning 24/7. In recent years the archival and library community has published a number of reports aimed at providing guidance to archivists and librarians managing born-digital materials (e.g., images, documents and video) held on aging media (e.g., CDs and hard drives). These reports highlight the risks of bit rot (i.e., files deteriorating over time), obsolescence (i.e., hardware, software and physical media are no longer in use and cannot be accessed), and accidental alteration or deletion during management and preservation activities. This paper explores the next generation of digital photographs collections, which are not stored on physical media. Technological innovations that support the convergence of digital cameras into mobile (e.g. smartphones) and wearable (e.g., Google glass) devices with connectivity to social media platforms including Flickr and Facebook are introducing new methods for creating, sharing and storing digital photographs, which present new challenges for professional librarians and archivists. Firstly, uploading and downloading digital

photographs to popular social media platforms removes digital image metadata, such as photographer name, date(s), and copyright. Information professionals may be unable to establish provenance and integrity without image metadata. Secondly, through Terms of Use agreements, social media platform providers define their right to terminate accounts, control the future use of site content, and modify these terms at any time. Information professionals may be unable to acquire and preserve collections that are controlled by a third-party, or deleted due to service interruption and bankruptcy. If individuals and organizations continue to place their trust in social media platforms as repositories for visual culture, then information professionals should assess the risks and benefits.

This paper raises questions regarding roles and responsibilities for ensuring that digital photographs collections held within social media platforms remain accessible for the long term. Unlike traditional archival repositories that provide their archival materials with trustworthiness and give them the capacity to serve as evidence and continuing memory of social and cultural activities, social media platforms emphasize access over preservation and provide little information regarding their management of member accounts and associated content. As individuals and organizations continue to adopt photo-sharing sites to access and store their image collections, more information about these services is needed in order to guide decision making and safeguard ongoing access to image collections for future generations.

Exploratory Social Network Analysis of Archives and Social Media Use

Jenny Stevenson, University of Wisconsin-Milwaukee

This paper will analyze a quantified data set of archival institutions in the Midwest region of the United States. The purpose of this study is to gain knowledge of the effects of implementing social media in areas of public service in order to identify and evaluate social media for future use in archives. The study will analyze the numbers to provide statistical evidence of what is happening "behind the scenes", and what is the correlation to the content of the post and the number of responses. A pilot study was conducted that interviewed archivists and their social media use. The pilot study found that most archivists thought that certain social media posts were more popular than others. This study will analyze the statistical side to that question among others. The study uses a quantifiable data set of site usage, specifically from referrals from social media applications to archival collections. Multidimensional scaling will be employed to analyze the content of the posts themselves. A clustering of the like nouns from the social media posts will provide an insight into the material that archive institutions are posting to social media. Parallel coordinate analysis will be used to group similar posts into different categories.

#MPLP: Social Tagging in a Minimally Processed Digital Archives

Edward Benoit III, University of Wisconsin-Milwaukee

The archival community faced a massive backlog problem during the past twenty years, to the extent that some archives house more unprocessed (and therefore inaccessible) collections than processed ones. In response, Greene and Meissner (2005) proposed a drastic shift in both archival theory and practice toward the concept of "More Product, Less Process" or MPLP, and minimal processing. I propose extending the MPLP concept to digital archives to increase the number of digitally accessible collections. This technique prioritizes the collection as a whole over individual items, specifically regarding metadata. The lack of sufficient metadata for each item limits user access, however incorporating participatory archives practice, specifically social tagging, could help build a robust lexicon for the collections.

Social tagging within digital collections without some measure of control could generate too many useless terms, thereby hindering access rather than increasing it. While some suggest digital librarians and archivists could simply approve/disapprove each tag, such a system requires too much oversight. I propose categorizing the users rather than the tags, specifically permitting users who self-identify as subject area

experts (hereafter referred to as expert users) to tag the collections. The expert users provide more reliable tags, meeting the needs of institutions and increasing access to the collections. This paper explores the potential for controlling/mediating the supplemental metadata from user-generated tags through inclusion of only expert domain user generated tags. Furthermore, the paper investigates the following research questions and associated hypotheses:

- RQ1: What are the similarities and differences between tags generated by expert and novices users in a minimally processed digital archive?
- RQ2a: In what ways do tags generated by expert and/or novice users in a minimally processed collection correspond with metadata in a traditionally processed digital archive?
- RQ2b: Does user knowledge affect the proportion of tags matching existing metadata?
 - H1: The proportion of tags matching existing metadata is affected by user's domain knowledge.
- RQ3a: In what ways do tags generated by expert and/or novice users in a minimally processed collection correspond with existing users' search terms in a digital archive?
- RQ3b: Does user knowledge affect the proportion of tags matching guery terms?
 - o H2: The proportion of terms matching users' query log terms is affected by user's domain knowledge.

The paper addresses the research questions and hypotheses through a mixed methods quasi-experimental two-group design focused on tag generation within a sample minimally processed digital archives. Sixty participants divided into two groups (novices and experts) based on assessed prior knowledge of the Civil Rights movement in Milwaukee (the sample collection topic) will each generate tags for 15 photographs. Additionally, the participants completed a pre- and post-questionnaire identifying prior knowledge, and assessing their experiences tagging during the project. The resulting tags were analyzed through opencoding and descriptive statistics. Additional analysis compares the generated tags with the metadata removed from the sample collection and query terms from the existing digital collection's server logs.

12:30 - 2:00 | Lunch | *Litchfield Towers*

2:00 – 3:30 | Workshop: Digital Preservation & Access | 3rd Floor Quiet Study SIS

David Kim, University of California, Los Angeles Matt Burton, University of Michigan Amelia Acker, University of Pittsburgh

Preservation and access have long been the fundamental tenets of the archival profession in the U.S. While much discussion has been devoted to the reconsideration of traditional approaches in archival studies/science, too often abstract and all-encompassing claims about the benefits of "open access" and "open standards" have circumscribed/overdetermined the field's response to the technological changes introduced by Web 2.0. The proverbial "openness" of the web obscures the complexities of intellectual and artifactual ownership and provenance, as well as crucial differences between use and access.

The discussions of these issues for this workshop will build on three examples of such community of practice: private or "closed" BitTorrent sites, corporate and state surveillance metadata, and open source software development. Despite the ongoing debates on its legality in relation to copyright, the BitTorrent sites offer useful examples of a highly effective means of establishing descriptive metadata standards, securing the continuum of the access and use of digital assets, and incentivizing user participation. The open source software community provides insight into mechanisms of decentralized provenance,

preservation, and access through version control systems and open-source distribution. In reaction to the constant collection and creation of metadata bycorporations and state surveillance programs, many individual users and social media technologists have created new ways of deleting, encrypting, and sharing messages with mobile ICTs that involve innovative practices of deleting, overwriting, or self-destructing digital records. Many of these new mobile ephemeral and encryption messaging apps support emerging appraisal and curation possibilities for archival researchers to engage, interrogate, and study.

The organizers will each give a short introduction to the topic, followed by group sessions around the themes of 1) redefining the "open" and the role of the institution/administrator as mediators of access, 2) strategizing for archival "cloud": economy of abundance/scarcity and the availability of archival data, and 3) incentivizing meaningful user contribution. These discussions are designed to initiate conversations at the intersection of archival studies, software studies and infrastructure analysis. Depending on interest and the result of the workshop, the final outcome will be a collective bibliography and/or white paper in anticipation of collaborative research in the future.

2:00 – 3:30 | Paper Session: Archival Memory | 404 SIS

Archival Scholarship in the Nation's Capital: Ernst Posner

Jane Zhang, Catholic University of America

On December 8, 1949, a small but distinguished group of guests gathered in the foyer of the Mullen Library of the Catholic University of America (CUA) located in the northeast of Washington DC to officially open the Archives of the Catholic University of America. Among the small group of the distinguished guests were Wayne Grover, then archivist of the United States, and Ernst Posner, then archivist and professor of American University.

Ernst Posner (1892-1980) spent most of his professional career as an archival educator, theorist, and advocate in the Washington DC area. He delivered a Good Friday 1938 lecture at the National Archives and returned in the following year to teach in American University. For more than twenty years (1939-1961) he taught archival administration at American University in cooperation with the National Archives. His professional career in Washington covered the tenures of the first four archivists of the United States and influenced the National Archives on important issues such as protection of European archives during World War II. He worked closely with the two archivists of the United States: Solon Buck (1941-1948) and Wayne Grover (1948-1965). After his retirement from American University in 1961, he continued to be active in the region until he returned to Europe in 1972.

Ernst Posner was an active professional figure in the Washington DC area, as shown in the opening ceremony of the CUA Archives. The majority of his archival research and resultant publications was accomplished during his three-decade long stint in the region, including the 16 essays he wrote between 1939 and 1960 (*Archives and the Public Interest: Selected Essays by Ernst Posner*, SAA 1967, 2006), the trips and research on State archives between 1961 and 1964 (*American State Archives*, 1964), and his research on ancient archives in Dumbarton Oaks between 1964 and 1970 (*Archives in the Ancient World* by Ernst Posner, 1972). The proposed research aims to trace the career path of Ernst Posner in the Washington DC area, and find out how the professional environment in the nation's capital helped to leverage his remarkable contribution to American archival education and development of American theory and practice.

Adapting and Adjusting Western Record Keeping Systems: A Case of the Ministry of Foreign Affairs of Japan

Takahiro Sakaguchi, Kyoto University

This presentation will explore how modern Japan has introduced Western recordkeeping systems and methods. In terms of culture, law, administration, and technology, Japan has been mostly influenced by ancient China, modern Europe, and the post-WWII United States. These foreign systems and methodologies, however, tended to have been gradually adapted and adjusted in order to fit with Japan's traditions and circumstances. The recordkeeping system is no exception.

After the restoration of imperial power in the 1860s, the Japanese government quickly began to adopt Western administrative systems. One of these was the European centralized registry system. Bureaus of archives were established in each ministry as the centralized repository of their records. Local governments were directed to submit an annual inventory of their administrative records to the Ministry of Interior. However, these directions were not effective, and so, after the 1880s, public records were kept in each bureau or local office in their own way.

In the 1920s, the American filing system of correspondence was introduced as a new scientific office management method, and some large companies and government bureaus tried to adopt it. Japan's Ministry of Foreign Affairs sent an official to the U.S. Department of State in order to study its centralized filing system and decimal classification of correspondence. In 1927, the Ministry implemented a similar system, in which the archives division was allowed to keep all the ministry's records. Within a few years, however, the system was nearly abolished and the previous system reinstated because of transaction delays and officials' dissatisfaction with the system. Decentralized filing was thus allowed, to some extent.

After World War II, when the American filing system was again introduced to occupied Japan, Japanese advocators did not favor the strict centralized management of records and recommended a decentralized system as a practical solution. They referred to the records management discipline and the concept of "centralized control under decentralized files," which was just emerging in the United States.

The decentralized filing system became rather popular and underpinned Japan's rapid economic growth in the 1960s. It was customary, however, that non-professional employees file their offices' records along with their primary duties. Professional records managers and records centers, as the core components of records management, were rarely established. Each office developed and used a classification scheme that they found useful, instead of using uniform organization-wide schemes. Japanese people usually do not prefer to entrust the filing and management of their own records to external professionals. The quality of records management thus depends heavily on the capacity and understanding of ordinary employees.

In 2011, the Public Records Management Act was enacted and American records management systems are once again in the spotlight. In order to successfully operate and diffuse these systems, however, it will be necessary to study the context and conditions of recordkeeping, along with its relationship with Japanese organizational culture.

The Wicked Problem of Documenting Counterinsurgencies: A Study of US Advisor Province Reports from the Vietnam War

Eliot Wilczek, Simmons College

Drawing from my dissertation work, this research presentation looks at the relationship between how organizations understand and document wicked problems through a historical examination of monthly province reports written by US advisors during the Vietnam War. In their 1973 Policy Science article "Dilemmas in a General Theory of Planning," Horst Rittel and Melvin Webber define wicked problems as societal problems that are complex, vitally important, ill defined, and "rely upon elusive political judgment for

resolution." Poverty, crime, and climate change are frequently considered types of wicked problems. Rittel and Webber point out that understanding and describing wicked problems is closely tied to conceptualizing solutions to the problems. How organizations document wicked problems is closely linked with what they perceive as meaningful sources of problems and solutions.

Understanding counterinsurgencies as wicked problems helps to illustrate how civil and military leaders form their conceptualization of an insurgency, and thus shape their prescription for how to defeat the insurgency, their understanding of the problem shapes what they measure and how they measure it. This presentation will look at the recordkeeping behavior factors that shaped the creation of US advisor monthly province reports during the Vietnam War using the frame of wicked problems. By looking at the documentation and reporting rules for these province reports and how these rules helped shape the reports, my work will contribute to an expanded understanding of how the records and their structures shaped understanding, discussion, and actions related to wicked problems.

2:00 – 3:30 | Paper Session: Active Information Management | 501 SIS

Reading Community Records through the Continuum

Heather Soyka, University of Pittsburgh

Used as a tool for learning, identity building, connecting, and knowledge transfer, the records of a community and its work can act as an infrastructure that brings people together. Seeing community recordkeeping this way emphasizes the contextual nature of records as they play a critical role in the strength, effectiveness, and longevity of a community. Records and recordkeeping can be viewed as factors that facilitate community memory and cohesion and enable members to share experiences and learn how to situate themselves in their community.

My dissertation will use the record creating behaviors of active military officers within a particular community of practice as a lens for exploring what this case can reveal about the records continuum as a model. This research paper, which draws upon my dissertation work, will discuss infrastructures of layered records that have multiple creators over time and space that serve to actively create, shape, and sustain the community.

Keep and Destroy: Responsibility in Records Management

Jane Gruning, University of Texas at Austin

This paper describes findings from a group ethnographic study of records managers. While the project as a whole investigated records managers in four different workplaces, this paper focuses in detail on workplace practices in one of those locations, a state Department of Children and Family Services.1 Employees at this location were charged with putting higher level records management decisions into practice, that is, they applied rules about which records should be kept and which should be destroyed. Due to the sensitive nature of the records and their clear importance for the lives of the people represented in them the records managers were very aware of the great responsibility that had been delegated to them. They recognized importance of their jobs and the potential effect that mistakes could have on the lives of the people represented in the records. However, there was a particular factor that seemed to alter the records managers' perceptions of their own responsibility. This was the medium of the records. Paper records were seen as the archetypal record, and records managers were certain of their responsibility for those records. Records managers' perceptions of their responsibility for records decreased, however, when the records were stored on non—— paper media such as CD or VHS. This paper explores how these perceptions were reflected in work practices at the Department of Children and Family Services.

The Impact of Archival Legislation on Records Management in Commonwealth Countries

Elaine Goh, University of British Columbia

The proposed presentation is based on my ongoing dissertation research entitled "From the Trenches: An Exploratory Study of the Impact of Archival Legislation on Records Management in Commonwealth Countries". My research is situated within the context of the United Kingdom, Canada and Singapore since these three countries represent the head of the Commonwealth, the Americas and the Asia region respectively.

Archival legislation in Commonwealth countries tends to entrust the National Archives with the statutory mandate to manage and preserve government records. However, archival legislation in these countries has been observed to lack sufficient rigor to effectively manage and preserve records over the record's entire lifecycle Consequently, archival researchers have described archival legislation as being "permissive" in nature for not imposing "statutory obligations" on the roles and responsibilities of records creators. For example, archival legislation in a number of Commonwealth countries does not provide a system to ensure that agencies comply with recordkeeping requirements. It also does not provide "statutory backing" to the National Archives to effectively monitor records management practices in the government. In addition, there are areas of inconsistencies and contradictions when archival legislation interacts with other statutes and regulations.

Most of the studies on legislation in the archival literature tend to either adopt the perspective of legislation as a focal point of enquiry or view legislation as a variable which influences the recordkeeping and record preservation process in organizations. For example, there is a corpus of literature on the implications of the freedom of legislation acts with regard to how organizations create, manage, dispose and provide access to their records. The archival science literature has also analysed other legislations such as the Crimes (Document Destruction) Act, Personal Information Act, Uniform Electronic Evidence law and the impact and implications of these legislations on the creation, management, use and preservation of records. In addition, there is an emerging body of literature which draws upon existing case laws and analyses the implications of such cases on the record creation and recordkeeping process.

However, there is a paucity of research conducted in archival science which addresses the issue of how archivists and records professionals interact with the law. Although these individuals are legal persons, they are also social beings with their own shared frames of understanding as well as their own sets of experiences, which affect the manner in which they interpret and internalise the archival legislation. The purpose of my doctoral dissertation work is to identify areas where the archival legislation and recordkeeping activities. It also aims to understand how the law is constituted within specific political, administrative contexts and in different archival systems.

The proposed presentation will cover the motivation for the study, the research questions, methodology as well as preliminary insights based on interviews with archivists and records professionals in the United Kingdom, Canada and Singapore and an analysis of relevant pieces of legislation, policy directives and parliamentary debates from these three countries.

9:00 – 10:30 | Student Day Plenary: Behind the Academic Curtain: How to Find Success and Happiness with a PhD | Bellefield Hall Auditorium

Frank Furstenberg, University of Pennsylvania

More people than ever are going to graduate school to seek a PhD these days. When they get there, they discover a bewildering environment: a rapid immersion in their discipline, a keen competition for resources, and uncertain options for their future, whether inside or outside of academia. Life with a PhD can begin to resemble an unsolvable maze. Frank F. Furstenberg offers a clear and user-friendly map to this maze.

While the greatest anxieties for PhD candidates and postgrads are often centered on getting that tenure-track dream job, each stage of an academic career poses a series of distinctive problems. Furstenberg covers the entire trajectory of an academic life, including how to make use of a PhD outside of academia. From finding the right job to earning tenure, from managing teaching loads to conducting research, from working on committees to easing into retirement, he illuminates all the challenges and opportunities an academic can expect to encounter.

10:30 - 11:00 | Coffee Break | Bellefield Hall Lobby

11:00 – 12:30 | Workshop: Research...for Non-Researchers? | 3rd Floor Common Area SIS Kelly Shaffer, University of Pittsburgh

Researchers often struggle to explain their work and to make those outside of their field of interest understand its importance. Whether chatting someone up in an elevator, writing a summary for a grant proposal, or presenting at an international conference, there is a need to be able to define your work for someone who may not share your field's jargon and/or foundational knowledge. What if you're entering the job market and giving a job talk for a "mixed crowd" – people from disciplines other than your own? What if you have to meet with the university's Board of Trustees, who comprise leaders from many different professions and fields.

Kelly Shaffer, formerly an iSchool marketing staff member, will discuss how to think about the appropriate presentation of your research to others, how to phrase things so everyone can appreciate the value of your work, and how to impress those outside of your field of interest. Real-world examples and practical advice should help you to become proficient in the art of promoting your research.

11:00 – 12:30 | Workshop: Scholarly Publishing | 3rd Floor Quiet Study SIS

John Barnett, Scholarly Communications Librarian, University of Pittsburgh
John Barnett will discuss publishing and open access services and tools available through the Office of
Scholarly Communications and Publishing at the University of Pittsburgh, offering doctoral students insight
into library resources that can support their research.

11:00 – 12:30 | International Archival Curricula, Pedagogic and Cultural Issues: An Interactive Moderated Session | 501 SIS

Moderator: Richard J. Cox, University of Pittsburgh Karen Anderson, Mid Sweden University Jeannette Bastian, Simmons College

While there is general and fundamental agreement internationally about what archivists and records managers do, there is a great variety in what they learn, how they learn it and where the emphasis is placed. As online courses offer the enticing potential of international education, a comparative analysis of archives and records education across countries and programs may be a first step towards determining the feasibility of an international archival education program.

This interactive session continues a joint research project on the viability of international archives programs. In the first phase, the research initially analyzed the archives and records education programs in three universities from Sweden, the U.K. and the U.S. through mapping program content against each other, identifying similarities and differences, likenesses and gaps. A brief questionnaire then queried archival educators from a spectrum of countries about their understanding of core content, their vision of international education and whether they considered that there is such a person as an international archivist. Specifically it asked how much space is needed in a program for jurisdiction- and culture-specific content?

In addition to presenting the findings of the first phase of the research, this presentation will encourage audience participation and discussion generally on topic of international archival education and specifically on the issues and implications surrounding culture-specific content arising from the initial research.

12:30 – 2:00 | Lunch | *Litchfield Towers*

2:00 – 3:30 | Workshop: Teaching and Faculty Development, Part 1 | 3rd Floor Common Area Lauren Herckis, University of Pittsburgh, Center for Instructional Development and Distance Education (CIDDE)

The first session of this two-part workshop will focus on professionalization, including the development of a teaching philosophy statement and a teaching portfolio. The workshop will include presented information and interactive activities in which participants work with one another in small groups.

2:00 – 3:30 | Workshop: Archival Access | 3rd Floor Quiet Study SIS

Wendy Duff, University of Toronto Elizabeth Yakel, University of Michigan Anna Sexton, University College London

The SAA "Guidelines for a Graduate Program in Archival Studies" identifies "Reference and Access" as Core Archival Knowledge. While the Guidelines delineates the basic content included under the rubric of Reference and Access educators must design courses that fit their program as well as their particular expertise. This workshop discusses three different approaches to teaching archival access courses. One course, taught at the University of Toronto, focuses on users and requires students complete a series of reference questions. One course, taught at the University of Michigan, takes a systems approach, while the final course from the University College of London places access services and use of archives within a broader legal, cultural and political context. The workshop will describe each course and discuss the pros and cons of the particular approach. Participants will be invited to share their experience teaching courses on access and to critique the three approaches.

2:00 – 3:30 | Paper Session: Cultural Heritage and Ethnography | 501 SIS

Valuing Our Scans: Assessing the Value and Impact of Digitizing Ethnographic Collections for Access

Ricardo Punzalan, University of Maryland

Over the last two decades, the libraries, archives, and museums (LAM) sector has made great strides at making ethnographic and anthropological collections available in digitized formats. Through digitization, cultural heritage institutions are finding creative ways to make these materials more discoverable and accessible. Access to ethnographic collections is increasingly mediated through digital avenues. Yet, despite these advances in digitization, no clear criteria have been proposed to evaluate the impact of providing online access to ethnographic collections. Moreover, there is scant understanding of the initial selection criteria used by heritage professionals and administrators when choosing collections and particular items for digitization. What are the goals of digitizing ethnographic collections? How are these goals set? And, more importantly, how is progress toward the goals assessed?

Digital collections have evolved to the point where "simply serving useful digital collections effectively to a known constituency is not sufficient" (NISO, 2007: 1). By supporting new forms of use and sharing, digitized collections fundamentally change the range and types of communities that can engage and be affected by the availability of these collections. While a plethora of general standards and guidelines for developing and maintaining quality digital collections are available, and are indeed useful in understanding technical, administrative, and policy aspects of digitization, these models do not attend to the impact of extant digital products and collections on various audiences and stakeholders (UKOLN, 2006; Kenny & Rieger, 2000; Arts and Humanities Data Service, 2008; and Schreibman, 2007). In addition, existing standards and metrics of the impact of digital resources tend to address broad swaths of information resources and hence may not be wholly appropriate for measuring the value of providing access to culturally sensitive content. We still lack relevant metrics for articulating the value of digitized and online ethnographic materials.

This paper highlights the approaches and perspectives employed in a collaborative project between the Smithsonian Institution and the University of Maryland College of Information Studies. The project aims to identify important considerations in assessing the value and impact of digitization of ethnographic collections. This paper presents preparatory work for this project and is organized in four parts. The first describes the profound changes happening within the LAM sector. In particular, I examine the effects

brought about by the expanding role of digitization and online access as fundamental institutional functions of heritage repositories. The second provides an overview of the current literature on impact and assessment that address the issue of valuing digitized collections. Third, I outline our ongoing collaborative research project that examines cases of ethnographic digitization projects in seven cultural heritage institutions. Finally, I conclude by offering "five considerations" to frame efforts for assessing the impact of value of digitized ethnographic collections.

Digital Heritage Preservation to Confront Technology Challenges

Pat Galloway, University of Texas at Austin

In this paper I seek to address the problems of the technological challenges in the preservation of digital documents. As an answer I draw attention to the need for digital heritage preservation—that is, preservation of the objects, documentation, and knowledge that make up the digital infrastructure that has been conventionally presented as so difficult to preserve. I will argue that focus on preserving digitally-encoded objects without attention to preserving their context of creation implies a considerable degree of blindness to the fact that digital technology is a cultural phenomenon, too. If we assume that we can preserve other cultural manifestations, there is no reason why we cannot preserve digital technology, and thereby be enabled to preserve the objects that are supported by digital technology, as well, much as the preservation of ancient woodworking tools enables us to more fully understand the carvings made with them, or as the rediscovery of ancient paint formulations assists us in preserving works of art.

I will discuss three aspects of this suggestion. I question the thinking that considers manufactured objects as unworthy of preservation by discussing the culture of creation around engineered and manufactured objects. I question the refusal to recognize a literate tradition of technological documentation as a literature by exploring the rhetoric and poetics of technology documentation. I question the rejection of the tacit knowledge of computer engineers as less important than craft skills or oral tradition by discussing the craft performance of trained engineers. Recognition of digital heritage preservation as itself a cultural phenomenon, characterized by its own mode of production and trajectory of development, can make a significant difference in the preservation of digital documents—and especially of their contexts of origin—over time.

Cultural Capacity: Unpacking UNESCO's Intangible Cultural Heritage Convention Tonia Sutherland, University of Pittsburgh

This paper builds on unexpected findings from dissertation research concerning the current state of resource management in the arts and cultural heritage sectors. Using Trinidad and Tobago, Newfoundland, and Belgium as case studies, this paper investigates how countries have leveraged the United Nations Educational Scientific and Cultural Organization's (UNESCO's) 2003 Intangible Cultural Heritage Convention for the documentation and preservation of local traditions. Working hand-in-hand with cultural heritage institutions such as archives, libraries and museums, UNESCO's Convention has dramatically increased our collective knowledge about global cultures. At the same time, however, it has also produced tremendous data collection and curation problems that are unique and distinct from the collection and curation problems associated with tangible artifacts. As this project demonstrates, intangible culture complicates prevailing notions of information as evidence and has become an important area of research and innovation in a broad range of institutional contexts. The project investigates ongoing efforts by cultural resource managers, national governments, NGOs, ministries of culture and small arts organizations to solve the problem of intangible culture by using a complex mix of analog and digital techniques as well as embodied practices such as re-stagings, re-tellings and re-enactments. This project also contributes to current policy discussions about global information challenges that require new types of cross-disciplinary, cross-cultural collaboration.

3:30 - 4:00 | Coffee Break | 3rd Floor SIS

4:00 – 5:30 | Workshop: Teaching and Faculty Development, Part 2 | 3rd Floor Common AreaLauren Herckis University of Pittsburgh, Center for Instructional Development and Distance Education (CIDDE)

The second session of this two-part workshop will focus on the integration of research, teaching, and mentorship. The workshop will include presented information and interactive activities in which participants work with one another in small groups.

4:00 – 5:30 | Workshop: Information Culture: An Introduction | *3rd Floor Quiet Study SIS Gillian Oliver, Victoria University of Wellington*

This workshop will contribute to the development of the archival studies curriculum by introducing the topic of information culture (that is, the values accorded to information, and attitudes towards it, specifically within organizational contexts). The objectives of the workshop are twofold. Firstly it will demonstrate the utility of the concept of information culture as the basis for the development and promotion of sound recordkeeping practices. Secondly it will stimulate reflection on the content and scope of education for records management, and explore the appropriateness of this in today's highly flexible and dynamic working environment.

Traditional records management education largely focuses on systems, processes and techniques required to achieve recordkeeping outcomes. Generally this approach largely ignores or at best superficially acknowledges the fundamental cultural issues encountered when attempting to implement these systems, processes and techniques in workplaces. The information culture perspective takes people, the employees of the organisation, into account, and facilitates the understanding and diagnosis of the cultural dimensions of organizations as socially constructed entities.

The workshop will explore the components of a diagnostic model, the Information Culture Framework (ICF). The ICF is underpinned by three key ideas: recordkeeping informatics, soft systems methodology and rhetorical genre. The model distinguishes three levels of factors, which will be used as the basis to structure the workshop.

The first level, fundamental influences, includes consideration of the value accorded to records, information preferences and national or regional technological infrastructure, as well as language. Although the factors considered at this level are hard to change, identifying key features is essential in order to guide records management programme development.

The second ICF level addresses the knowledge, skills and expertise of staff members relating to recordkeeping requirements. This encompasses understanding of information related competencies, for example information and digital literacy, as well as traditional areas of focus such as awareness of specific records-related obligations.

The final ICF level considers the characteristics that are unique to a particular organization and probably the most amenable to change, namely corporate information technology governance and trust in existing organizational systems. This final layer highlights the need for practitioners to work collaboratively with cognate information professionals and for reflective practice.

The workshop presenters will introduce the concepts and explain the factors at each level of the ICF. Discussion will then be opened up to consider how effective our current curriculum is in enabling students to engage with the factors identified, and to investigate where development or change is necessary to equip students with the knowledge and skills that will allow them to apply the concept of information culture in their workplaces.

4:00 – 5:30 | Paper Session: Teaching Archives | 501 SIS

Disciplining Digital Curation? What it Means to be an Emerging Field

Patricia Condon, Simmons College

In this presentation, I will discuss the findings and conclusions of my dissertation research on the educational landscape and disciplinarity of the emerging area of digital curation.

Digital curation is maturing both within the information disciplines and becoming increasingly embedded in practice. As the creation, access, and use of digital information become ubiquitous, digital curation is increasingly recognized as a requirement for the lifecycle management and long- term preservation of data. While digital curation professionals and researchers develop fundamental best practices and procedures for the lifecycle management of data, the educational requirements, knowledge set, and skill base of digital curation professionals continues to be defined and refined. Although there is a visible growth in educational and training programs in digital curation, it is still unclear how and where the transmission of this knowledge set fits within higher education. The answer to this problem hinges on whether digital curation is emerging as a discipline in its own right, a specialization within the information disciplines, or as a set of interdisciplinary best practices employed by the fields that work with digital objects.

This dissertation research is designed to explore the educational landscape of digital curation and investigate whether digital curation is emerging as an independent discipline in its own right. The central research questions addressed in this study are: Is digital curation emerging as an independent discipline? Where does digital curation fit within the educational landscape?

This dissertation employs a qualitative multimethod research design. The methodologies used in this dissertation are content analysis of published literature in the area of digital curation and qualitative interviews with individuals engaged in the area of digital preservation and curation. The content analysis probes in-depth the International Journal of Digital Curation (2006-2013, full-run), selected conferences (2001-2013), and leading articles by citation counts retrieved from Scopus and Web of Science (2001-2013). The interviews comprise 13 semi-structured, one-hour qualitative interviews with purposively selected participants who offer a particular expertise, insight, and perspective about this area. This study focuses on identifying themes that emerge from the academic discourse and scholarly communication, and understanding the level of consensus among educators, practitioners, and researchers about how they view this domain. Coding for the content analysis and interview transcripts employs both a standardized pre-defined coding instrument and an open, emergent coding framework using NVivo qualitative data analysis software.

Insight gained from this study is useful for stakeholders, including educators and practitioners, seeking to understand the current and future educational landscape and structure of knowledge transfer of digital curation practices, skills, and theories. This study is useful for stakeholders who seek to understand the position of digital curation among the information disciplines and within higher education. Additionally, this research contributes to the literature about the emergence of disciplines and furthers our understanding of the educational complexities that accompany that potential emergence.

The Innovation of Archival Teaching Method: Introducing Archival News into the Classroom

Xiaoyu Huang, Renmin University of China

The article focuses on the innovation of archival teaching method which the author introduces archival news into the classroom. Based on literature review, the author describes developing stages of archival news teaching, analyzes the reasons, achievements and social influence of this new method. Reasons of taking the new measure include limited features of the archival profession, weakness of traditional teaching and expectation for raising students' social archival awareness and cultivating their comprehensive abilities. The innovation has got achievements on teaching objects, subjects, contents and atmosphere. For teaching objects, it stimulates students' interests in professional learning, cultivates their comprehensive abilities, improves their social archival awareness and improves their information literacy. For teaching subjects, it improves the teacher's teaching methods, learning ability, teaching level and scientific research ability. For teaching content, all-embracing and vivid archives news enriches the teaching content and manifests the frontier. For teaching atmosphere, it forms a highly participation, lively and interesting classroom atmosphere. Archival news teaching can make positive influence on the archival community by publishing, communicating and applying news research products. For example, professional journals can be the publishing platforms of archival news teaching results; professional meetings can be the communication platform of archival news teaching results; and there are maybe some application platforms for the archival news teaching results.

Exploring the Possibilities of Digital Storytelling in Archival Education

Janet Ceja, University of Arizona

This paper is an examination of digital storytelling as a tool for teaching archival advocacy. Digital storytelling is a participatory practice that helps build knowledge and skills in the digital production of multimodal presentations through first person narratives. Student learning is manifold as multiple literacies are exercised through research and the creation, gathering, evaluation, and use of formal and informal records to tell a story. In the archival classroom, the production of digital stories aimed at increasing the public's understanding of the significance of archives encourages students to voice their personal and professional commitment to archival activism. This paper discusses how educators can use digital storytelling to motivate students to build consciousness and raise social awareness of the value of archives in their communities.

4:00 – 5:30 | Paper Session: Embedded Archival Theory | 403 SIS

The "Middle Archive", a New Concept in Swedish Archival Terminology

Ann-Sofie Klareld, Mid Sweden University

The governmental administration and its archives are closely bound together; a modern state could not function without records. Commonly, democratic nations organize control over their information resources by delegating power and mandates to a National Archives. But with the introduction of new techniques to produce records, management tends to change, and new constellations of actors may affect the recordkeeping.

The overarching goal of my dissertation is to study how power and mandates of public authorities' archives are (re)organized and (re)negotiated within the framework of electronic information governance. Creating and defining concepts is one way to exercise power and allocate mandates. This paper therefore focuses on a new word in Swedish archival terminology: the "middle archive". Previous efforts to assemble terms relevant to archivists and archival scholars include the ICA Multilingual Archival Terminology Database and the Society of American Archivists' Glossary of Archival and Records Terminology.

The aim of this study is to increase the understanding of information governance within the context of e-government, by analyzing what has created the need for the term "middle archive" and examine if it is a sign of changes in the Swedish archival tradition.

Although the Swedish Archives Act states that records should be managed independent of format, there are differences between the management of paper and electronic records. New technological and organizational strategies are needed. A project was initiated by the National Archives in 2010 with the goal to create common specifications for the transfer of information between systems. One undertaking of the project has been to produce a list of concepts, which includes the term "middle archive". What does the term mean, and why was it developed?

Since 1766, the Swedish constitution gives citizens free access to public records. The constitution is further supported by the Archives Act, which declares that a public authority's archive consists of the records created as a result of its business. Consequently, in Sweden an archive can consist of both active records still used by the organization, and inactive records that are preserved. In other words Sweden has a holistic view of the archive. Governmental authorities are responsible for records management until the archive is transferred to the National Archives. A recently initiated authority, the State Service Center, is however suggested to provide an e-archive/"middle archive" as a service. This means that their solution will function as a repository for semi-current material until final transfer to the custody of the National Archives.

Since the Swedish language has no distinction between "record" and "archive", one can claim that neither current records nor archival records exist in Sweden: here only records exist. Nevertheless, previous research indicates that archival practices changed significantly when digital records became the norm, and paper ones rarer. But the Archives Act has not been changed, so Sweden has not officially conformed to the nations where active records and non-active records are separated.

This study is based on a review of documentation created between 2010 and 2013.

Tracing a Record as Open Data

Morgan Currie, University of California, Los Angeles

Open government data websites are initiatives by governments to make their internal records available to the public in machine-readable, adaptable formats protected by open licenses. Open data policies from city to federal level represent a shift in how governments view the records they generate. Similar to the culture of emergent innovation found in some open-source software projects, open data proponents describe records as resources that can accrue in value through unexpected, innovative reuse by private companies, non-profits, and individuals.

This paper explores the relationship between concepts of *records* as formulated by archival theory, and recent theories about *data* found in information studies and science and technology studies. I do this first through an analysis of the rhetorical uses of these concepts in press releases and the popular press reports on open data. This research argues that as government records are given over to public consumption they are framed increasingly through the rhetoric of 'big data' or 'open data', in addition to traditional internal bureaucratic recordkeeping. Such a shift may challenge traditional archival notions, such as Margaret Hedstrom's, that records have no intended external value beyond the processes of their production: "Records are not consciously produced information products that are intended for dissemination, even though their informational content may be valuable to inform the public or to enlighten research." Open government data arguably challenges the classic understanding, as government agencies in many major cities around the U.S. have begun to produce statistical records with the understanding that some of these will be made available to the public through frequently updated APIs. Here, records are positioned both as part of internal bureaucratic processes and for the unknown value they might accrue through public use.

Second, I draw on archival theory to understand how data can be treated with archival concerns. The process of producing a record as open government data is a material process emerging through the actions of government agencies, as data are represented on public platforms, including mobile phones apps and the open semantic web. In particular, I focus on an analysis of the Socrata web application, the most widely used platform in U.S. for presenting government records in open data formats to the public. Drawing on archival theory about the record (Terry Eastwood and Geoffrey Yeo) and electronic records (Hedstrom), as well as on insights from the area of software studies (Matthew Fuller), this paper will ask how an archival understanding of records can inform an investigation into open government data projects, and particularly whether archival concerns can emerge at the level of interface.

CAIN: Digital Archiving and the Northern Irish "Troubles"

James King, University of Pittsburgh

Recent archival literature documents the profession's struggle to interpret digital or online repositories within traditional archival terms. As Emily Monks-Leeson observed, "It is thus important for archivists to ask what is meant, in these websites or online contexts, by the use of the term *archive*." My proposal will build on and expand this conversation by examining how a well-known digital archive functions within a network of other digital and analog memory projects archiving Northern Ireland's Troubles.

Initiated in 1996, the University of Ulster's CAIN (Conflict Archive on the Internet) has functioned as an expansive digital repository for nearly two decades. Dynamic and experimental in its content offerings, CAIN hosts three fundamental types of material: 'first, material written and edited by members of the project team; second, articles contributed specifically for CAIN by external sources; and, third, material that has been previously published elsewhere.' Recent additions have included visualizations of data related to the Troubles and digital versions of public records held by the Public Record Office of Northern Ireland (PRONI). Through collaborations with a variety of academic, governmental and community archival projects, CAIN provides new and exciting perspectives on how to archive the Troubles.

Drawing on literature pertaining to social justice, digital preservation, and archival theory, I propose to examine the role CAIN plays within Northern Ireland's transition towards a post-conflict society. In particular, I hope to answer the following questions: How does digital archiving differ from traditional archival projects underway in Northern Ireland? Where does CAIN intersect with other archival and memory projects currently documenting the Troubles? And what role does digital archiving have within the overall national peace and reconciliation agenda in Northern Ireland? My methodology will rely in part on virtual ethnographic strategies such as e-mail interviewing and online data collection. In terms of broader implications, the paper will both further our understanding of the linkages between digital and traditional archives and reveal how digital archives play a unique and critical role within societies working towards a post-conflict transition.

Student Dinner | Joe Mamma's, 3716 Forbes Ave.

Faculty Dinner | Wyndham Pittsburgh University Center, 100 Lytton Ave.

8:30 – 9:00 | Continental Breakfast | Bellefield Hall Lobby

9:00 – 10:30 | Plenary: Think Like an Economist... Then What? | Bellefield Hall Auditorium Ronald L. Larsen, University of Pittsburgh

During the past decade, we have witnessed radical and ongoing change as digital technologies continue to transform society. Our attempts to understand these changes and account for them in our educational institutions underlie the growth of iSchools from an initial core of 5 US-based universities a decade ago to the current international consortium of 55 universities. It also (at least partially) accounts for the emergence of AERI as a response to the challenges confronting the archival community and the education of future archivists. Archivists now face a broad spectrum of responsibilities, from those rooted in the historic traditions of analog archives, to the emerging challenges that accompany the explosive growth of digital resources. In this presentation, we will look at how these changes are playing out measurably, in terms of trends in position descriptions, projected demand, and institutional capacity. We will also consider some requirements and strategies for educating a workforce that is better prepared to address the emerging challenges and begin to carve out a more visible and proactive role for iSchools.

10:30 - 11:00 | Coffee Break | Bellefield Hall Lobby

Social Ecologies of Mental Health Records

Lorrie Dong, University of Texas at Austin

My dissertation investigates the social impact of medical records as documents that are embedded in hospital work, and later, as cultural heritage artifacts in archival settings. The research site is currently an active, Reconstruction-era state mental institution in the American South. By examining the existing archival record collection and conducting interviews with staff members, record managers, archivists, and researchers, I am reconstructing the record ecology (i.e., the social world of documents) over several prominent eras of the hospital's history. Analysis of the data involves an iterative process of open coding, situational mapping, and memos.

For my paper at AERI, I will present several narratives of how mental health records, as material objects, have mediated the daily medical and social treatment of patients and the interpersonal relationships of the institution's staff and archival professionals. My analysis thus far illustrates that official materials for patient documentation were an ingrained and tacit part of hospital culture. The keeping of records and the types of information that was recorded at any given time period affected the relationships among the various individuals within the hospital network, often perpetuating hegemonic attitudes regarding race, gender, and mental faculties. As historical documents, the records continue to mediate relationships; therefore, as part of my research, I am determining the potential social impact of the records as material culture.

As an outcome of my dissertation, I intend to facilitate a better understanding of the changing social roles of mental institution records as they transition from serving as medical documents to archival ones. In my paper, I hope to share some of the ideas I am developing toward a theoretical framework and practice-based recommendations for heritage professionals on how to approach the management of ethically and legally sensitive documents. If health records can be seen as having multiple social contexts, then they can become the foundation for emergent narratives from both the record creators and the recorded subjects.

How Do We Shape the Archival Record? Exploring the Relationship Between Collection Development and Representation at the Wellcome Library in London

Anna Sexton, University College London

My PhD research is based in the Special Collections Department at the Wellcome Library in London and has involved undertaking Participatory Action Research with a marginalized stakeholder group to build a new digital archive collection based around lived experiences of recovery in mental health (http://mentalhealthrecovery.omeka.net). This paper will focus on the research I have undertaken to explore the development of the mental health recovery archive in relation to the institutional context in which it sits; where I have sought to explore the extent to which current practice, policy and attitudes within the Special Collections team sit in tension with both the participatory process that was adopted in the mental health recovery archive, and the end products that arose from that process which have a focus on personal expression predominantly held together through narrative.

This paper draws on interviews conducted with the current Special Collections team at the Wellcome Library (and other related members of staff) as well as an analysis of archival policy documents and documentation around procedures which taken together begin to reveal what constitutes normative archive practice in this particular local context and how this practice has shaped and continues to shape the archive collections. In particular the research reveals how the development of the archive collections is infused by an interplay between past and present; where the historic foundations and initial trajectories upon which the collections have been established still act as the inescapable anchor point from which the collection moves. The research also looks closely at the archival processes currently undertaken by the Special Collections team particularly in relation to collection development, interpretation and engagement and reveals how these processes are themselves shaped through the broader institutional and professional contexts in which the archive is embedded; as well as collective interpretations across the team in relation to archival aims and goals; and the attitudes (and degrees of influence) of individual archivists.

The paper will conclude with my opinions on the degree to which Special Collections at the Wellcome Library is in a position to embed participatory approaches into its processes and the degree to which it is able to broaden its working definitions of what constitutes an 'archive'. Within this I will also seek to suggest how applicable my findings may or may not be to other contexts in which mainstream archive institutions are located. I will also seek to link my research into what Jacobsen et al (2013) have referred to as 'an important though underdeveloped dialog' in our field on 'the role of archival functions in shaping the creation of memory'.

Invisible Bodies: Information Structures for Representing Gender and Gender Variance in Medical Record-keeping Systems

Lauren Wynholds, University of California, Los Angeles

This research paper focuses on questions of how information structures may produce and reinforce information disparities for marginalized communities. Information disparities are common in marginalized communities, but become particularly acute around medical information needs. There are well documented but extensive information voids surrounding transgender populations and health care. Most medical record

keeping systems do not have record keeping affordances to adequately represent transgender, transsexual or gender variant persons. As a result, the records are typically indiscernible and/or invisible in aggregate. Most public health data does not include any information on trans populations. Most insurance companies, HMOs and providers cannot discern from their records how many trans people they serve. This paper explores the data and information structures that can render trans bodies invisible within health information systems.

The paper explores major sites of information voids that intersect with the invisibility of transgender and gender variant populations in medical information systems. The research relies on mixed methods under a framework of a grounded theory derived approach known as Situational Analysis as described by Adele Clark. The case studies examine medical information systems in terms of their structures and design. The analysis relies on close readings of the information structures (database fields, blank patient intake forms, publicly available healthcare information datasets, categories used, etc.). The paper presents historical and contextual information about the institutions and projects that created the information systems and structures.

More Product, More Process: Archival Implications of the BitCurator Project

Cal Lee, University of North Carolina Chapel Hill

When acquiring born-digital materials, archivists often must extract digital materials from media in ways that reflect the rich metadata associated with records and ensure records' integrity. They must also allow users to make sense of materials and understand their context, while preventing inadvertent disclosure of sensitive data. There are a variety of methods and strategies from the field of digital forensics that can aid this work. This paper discusses the development and application of digital forensics tools to improve the acquisition, management and access functions of archives. It reports on the BitCurator project, which is identifying current and desirable workflows of several archival institutions, as well as developing and testing tools to support the workflows. Incorporation of digital forensics methods also will be essential to the sustainability of archives as stewards of personally identifying information. There are a variety of potential changes within the archival profession that are associated with adopting digital forensics tools and practices.

Preservation by Design: Practice and Infrastructure in Open Source Software Development Matt Burton, University of Michigan

In early September of 2013, Linus Torvalds the lead developer of the Linux Kernel posted an announcement on Google+ saying that his hard drive had just died. Beyond a simple reminder of the materiality of digital systems, the death of this particular hard drive is significant because it contained one of the most important pieces of software in the world. Linus however was not concerned, "this is not a huge disaster, in that git is distributed and even if I can't make it come back, I lost perhaps three pull requests that I hadn't pushed out yet..." Because the linux kernel is developed on top of a robust software development infrastructure, very little work was lost and the whole matter was more of an inconvenience than anything else. The revision control system built and used by Torvalds for managing the linux kernel is a system called "git," which tracks the historical development of source code and automatically generate meaningful metadata. Such systems are built to be highly distributed performing a LOCKSS-like function by design. Revision control systems preserve a series of "commits" or units of code larger than the moment-to-moment save-file, but smaller than a software release. These units encapsulate a body of code, a new function, a bug fix, a period of work, locally meaningful to programmers participating in a shared

development practice. The history of all commits, that is the history of a project's development, are stored and saved within source code repositories. Furthermore, repositories can be *pushed*, *pulled*, *cloned*, *forked*, and *merged*, allowing for cooperative, yet temporally and spatially distributed, production. The repository's "provenance" (I use this term loosely) is captured, along with metadata, by these tools used to negotiate distributed collaboration. This means, in effect, principles of good archival practice are built into the tools and best practices within the OSS community.

The Open Source Software (OSS) developer community is rich ecosystem of practices, discourses, formal and informal ontologies, and tools. Within this ecosystem exists robust infrastructures for the production, publication, distribution, and preservation of source code. By infrastructure I mean not only hardware and software of networks and developer tools, but also the social practices and institutions of Agile programming and the Apache foundation. Embedded within these infrastructures are tools, habits, and practices deeply relevant to archival research. The design of OSS infrastructure embed assumptions about how source code should be produced, released, and preserved. My paper investigates the infrastructures of OSS development to see how archival concepts like provenance, access, and preservation are understood within the OSS community and explore opportunities for a two-way dialog between the OSS and archives research communities.

Archival Systems Interoperability – Research Themes and Opportunities

Greg Rolan, Monash University

There are considerable interoperability challenges for archival systems that need to endure through time and space, providing consistent and complete evidential access to archive materials (Evans, McKemmish, & Reed, 2009). Addressing the interoperability of archival systems within a socially, politically, disciplinary, and technically heterogeneous, divided and contested landscape has been identified as a societal grand challenge of our age (Gilliland & McKemmish, 2012).

From the earliest days of the World Wide Web, the potential for interoperable archival systems has been recognised (Sherratt, 1996). More recently, this concept has been refined and articulated as a distributed Archival Commons, comprising a federated network of archives with the generation and association of "links between objects using accepted Web standards". Such a space would "allow users to engage with archival materials as they pursue their own needs regardless of repository or institution" (Anderson & Allen, 2009). This interoperability has been identified as a core principle that should be upheld by public domain archival information services (McCarthy & Evans, 2012).

Previous Masters-level research investigated a web-based API for archival system interoperability in the context of the Australian Series System, based upon a standard metadata schema of entities, relationships, and elements, together with an ontological resolution mechanism. This research exposed areas in which conceptual and representational recordkeeping and archival standards could be improved, particularly where they have been conceived for ensuring compliance at the expense of encouraging interoperability. From an organisational perspective, there are structural and budgetary barriers to progressing interoperability initiatives for community access.

Moving forward, a wide-ranging investigation of archival systems interoperability, from theoretical, ontological, and practical perspectives, can be framed as a number of research questions – some of which are:

•	What standard metadata schema is necessary and sufficient to support community a	access	to
	archives? How should the reference model API be evolved over time?		

- How should relationships and events be modelled in an interoperable manner? How is the provenance of assertions (e.g. about relationships and events) from difference sources to be represented and managed?
- How should traceability and reproducibility be achieved in the meshing of archival data from multiple sources?
- How should authentication and authorisation be modelled and managed within interoperable archival systems, particularly with respect to access rights that may change over space and time.
- What are the implications for born-digital records for archival systems interoperability? What does mediated co-creation of records mean for identity and evidentiality.
- What are the requirements for read/write interoperability in order to support participative archives activities for example, tagging, annotation, and contribution of archive material?
- What user interfaces will support appropriate mental models for community discovery and access of archival records? Similarly, what interfaces would be useful for archive metadata diagnostics?
- What is the path (or paths) that an institution should follow to fully participate in federated archives in terms of achieving technical, organisational, and social levels of interoperability?

This paper will identify and expand on these questions and discuss research approaches that may be taken to begin to address them.

11:00 – 12:30 | Paper Session: Social Justice I | *501 SIS*

Stories for Hope - Rwanda: A Psychological - Archival Collaboration to Promote Cultural Continuity through Intergenerational Dialogue

David Wallace, University of Michigan

Can archives heal, and can therapeutic dialogues archived and made public contribute to cultural continuity in a post-genocide environment? This paper examines these questions by evaluating the archival component of a international psychology-archives collaboration: Stories for Hope – Rwanda (SFH). SFH is an inter-generational dialogue and collective narrative project between youth and elder pairs in postgenocide Rwanda. It draws on the collective narrative model from psychology and the community and participatory models from archives. SFH facilitates, records, archives, and disseminates Kinyarwanda audio and written English transcripts of permissioned dialogues between youths and their chosen elders. Over 100 dialogues gave been conducted. SFH is designed to assist Rwanda's coming-of-age women and men to deal psychologically with the consequences of massive violence, loss, and trauma in the contexts of inter-generational silences and cultural discontinuities created by the 1994 Rwanda genocide against the Tutsi. Participants (elder - youth pairs) were audio-recorded and given CD copies of their session. They were also given the choice to deposit their dialogues in Rwanda's National Archives, and make them available publically on the project's website (http://storiesforhope.org/). A qualitative evaluation of participants 6-18 months post-intervention strongly suggests that the archival component of therapeutic dialogues significantly contributed to both the motivation for participation, and the extent of participants' healings, with implications for the use of this model in other post-conflict and post-genocide communities where silences reign over useful conversations about the past.

Community Archives and Social Justice: Further Testing and Assessment of the Duff et. al. Archival Approach to Social Justice Impact Framework

Lauren Kilgour, University of Pittsburgh

During the past decade, there has been an increasing interest in "social justice" in the archival community. As part of this larger movement, Wendy Duff, Andrew Flinn, David Wallace, and Karen Suurtamm recently published an article entitled "Social Justice Impacts of Archives: A Preliminary Investigation" which explores archives' potential to have a social justice impact. Ultimately this article offers an initial framework for evaluating the social justice impact and archives, and asks that members of the archival community begin to further test their model, and related models, to more deeply understand the relationship between archives and social justice. Consequently, this paper aims to further engage in and add to the growing body of literature looking at the relationship between archives and social justice through further testing Duff et. al.'s framework. Currently, the framework developed by Duff et. al. has only been applied to mainstream archives. With this in mind, this paper shares findings from further applications of the Duff et. al. framework to learn more about its effectiveness and how it might be improved through applying it to a new area of study: community archives.

As such this paper primarily seeks to engage with the following question: how effective is the Duff et. al. framework at assessing the social justice impact of community archives, and what can be learned from this applying the framework to this archival realm? As I argue, answering this question first requires me to provide an overview of the history and development of community archives, and the history of the relationship between social justice, archives and community archives. With this background information in place, I then describe and explain the Duff et. al. framework for assessing the social justice impact of archives, and share case studies of the application of that framework to two Toronto-based community archives. I will then discuss key preliminary observations individually produced by those case studies, and will discuss and analyze those observations through comparing them. With this discussion in place, this paper will conclude with thoughts larger thoughts about how the framework can be further developed and refined in the future, as well as offering suggestions for future areas of research in the context of the relationship between community archives, social justice, and impact studies.

Thai Social Values and Attitudes and Their Impacts on Archival Access and Use

Naya Sucha-xaya, University College London

My PhD research project, "A Comparative Study of Archival Access and Use in the UK, France and Thailand," examines the relationship between archives and society by investigating how these three societies value archives and how this impacts their archival access and use. The analysis of this link is based on functionalist perspectives in sociology, as well as social psychology, and archival science.

A cross-cultural perspective is taken because this approach will enable a clearer view of one culture compared to others. The chosen countries are Thailand and two European countries, the UK and France, because Thailand's recordkeeping system was influenced by these two western countries in the nineteenth century, when the country had to be modernised under pressure of imperialism. However, the modernised recordkeeping system failed after that period as the social norms to support such a system did not take root in Thai society.

Some fundamental values in Thai society hinder use of and access to archives. For example, relationships have traditionally not been primarily about truth or evidence, which is an important value of archives. Another example is attitudes on archives. In Thai epistemology, knowledge can be acquired from believing teachers rather than finding the truth on one's own. This affects the use of archives in Thai society compared to the Western world, where finding the truth is most important in acquiring knowledge.

Attitudes are another element affecting the evaluation of archives. They are formed by information and experiences relating to the archives. Unlike in the West, popular perceptions of archives in Thailand are focus on the historical role of archives – recording of events in the past. The different understanding causes problems in accession since officers in governmental departments tend not to consider that their records will probably be archives in the future.

Informed by interviews with archivists, users and archives educators, this ongoing research is reaching some preliminary conclusions.

Firstly, the incompatibility of values of archives in a western sense and Thai values and attitudes does not necessarily mean that Thai recordkeeping will always have to be an underdeveloped sector. Conversely, archives can fulfill some lacking values in Thai society while the country is getting more integrated into the globalised world of the information age.

Secondly, this socio-archival relationship can help to develop strategies in archival practices. That is, archives must go out and connect to the outside world. It is worth considering how archivists should act or adapt themselves, what users have to learn, and how archives educators can support these roles. For example, the archives of Buddhadasa, a renowned Thai Buddhist monk, were collected and have become a successful religious archives institution in Thailand and a popular destination for Bangkokians, as it does not limit its potential to research purposes but uses archival content in activities, events and social media.

Thirdly, examining the link between archives and society has revealed the position of archives in society and how archives education can connect scholarship with other disciplines and address its own position in the academic world.

11:00 – 12:30 | EASP Session: Applying to PhD Programs | 502 SIS

Kelvin White, University of Oklahoma

This workshop provides an overview of applying to Ph.D. programs. Topics covered include the planning the application process, seeking strong letters of recommendation, choosing the right program, funding, and the differences between applying to Master's and Ph.D. programs.

12:30 – 2:00 | Lunch | *Litchfield Towers*

2:00 – 3:30 | Panel: Is Data Curation or Digital Stewardship the Future of Archival Science? | 3rd Floor Common Area SIS

Sheila Corrall, University of Pittsburgh Alison Langmead, University of Pittsburgh Liz Lyon, University of Pittsburgh

This panel will begin with three, brief, provocative presentations on the history of archival education in the United States, the types of roles we envisage for information professionals in the future, particularly with regard to the shift from support service to professional partner and embedded expert, and the research data aspects of digital curation and stewardship with focus on the new data roles emerging and new educational opportunities. Each panelist will conclude with questions and discussion points, designed to start a general conversation about the past, present and future of archival education.

2:00 – 3:30 | Panel: Audiovisual Archiving | 3rd Floor Quiet Study SIS

Moderator: Snowden Becker, University of California, Los Angeles

Karen Gracy, Kent State

Andy Uhrich, Indiana University

Marijke de Vlack, Universiteit van Amsterdam

Dan Streible, New York University

Jared Case, George Eastman House

Despite the existence of well-established, innovative, and influential graduate programs, research, and faculty that specialize in audiovisual archiving and preservation, audiovisual materials are still mostly marginalized in our discussions about the past, present, and future of archival studies. Knowledge of these records' critical affordances, preservation needs, and archival value is nevertheless a crucial component of the 21st century archivists' skill set.

This roundtable discussion brings together students, faculty, and administrators from the major audiovisual archiving and preservation programs, as well as faculty from more traditional IS departments/schools who teach in these specialized areas, to address with the AERI community the place of audiovisual preservation within archival studies as a whole. Each speaker will briefly address their programs' approaches to and personal experiences with audiovisual preservation education, followed by a moderated discussion of key issues, including:

- How specialized degree and certificate programs (such as those at UCLA, NYU, George Eastman House/University of Rochester, Ryerson University, and the University of Amsterdam) relate, structurally and philosophically, to archival studies and other disciplines
- Who is teaching and learning in these programs/courses
- Where and how specialized degree program graduates are applying their education, and how traditional LIS/archives program graduates are making use of specialized A/V preservation training available to them
- Who is pursuing doctoral-level work in this area; which programs are emerging as leaders in a subfield where the MA or MS has historically been the terminal degree; and where these new PhDs may be headed as junior faculty
- How audiovisual materials and preservation topics can be effectively integrated into existing curricula in archival studies

2:00 – 3:30 | Paper Session: Social Justice II | 501 SIS

Dictatorship Memories and Archives in Brazil

Luciana Heymann, Fundação Getulio Vargas

My research project aims at placing the debate on access issues regarding the "dictatorship archives" in Brazil (1964-1985) in the wider discussions about memory rights.

In 2009, thanks to the then Minister and now President of Brazil, Dilma Roussef, herself a former political prisoner in the military regime, a Reference Center on Political Struggles in Brazil (1964-1985) was created, and its name received a significant complement: Revealed Memories. The Center aims not only at making the documents of the dictatorship period that are under the custody of the National Archive of Brazil (the project manager) accessible, but to establish a network of public and private institutions, and people who are willing to share information and archives.

In my research project, the Reference Center served as a starting point for an investigation on social representations and power dynamics taking archives as subject. The two papers I have presented at AERI, in 2011 and 2012, focused on recent policies seeking to grant access to those archives and to make visible the victims memories. My intention, in 2014, is to present a continuation of my research, exploring the production of the "dictatorship memory" out of the State project. In this sense, the goal of my presentation will be the discussion of initiatives developed by civil society sectors in order to build archives, get memories registered and develop pedagogical projects.

Rights in Records: Appraisal

Sue McKemmish, Monash University

In Australia, the Trust and Technology Project found that acknowledgement by archival institutions of Indigenous rights of self-determination and facilitation of the exercise of cultural rights as human rights, linked to the principle of free, prior and informed consent, involves moving beyond the current focus on individual archival access rights to involve individuals and communities in decisions about appraisal, access and management of records relating to them, whatever their source (McKemmish et al, 2011).

A Royal Commission is currently investigating institutional responses to child sexual abuse in Australia, focusing on systemic issues. In the recordkeeping and archival domain, substantial and sustainable reform is urgently needed to confront and address systemic issues that have resulted in past and current recordkeeping and archival services failing to meet the identity, memory, accountability, advocacy and redress needs of our most vulnerable communities and adding to their trauma. The communities include Stolen Generations, Forgotten Australians, Former Child Migrants, Forced Adoptions, Care Leavers, and Children in Care.

A National Summit is planned for early 2015 on The Archive and the Rights of the Child. A possible outcome of the Summit is an extended suite of rights for the subjects of records and others involved in the events and actions documented them .In "Acknowledging, Respecting, Enfranchising, Liberating and Protecting", Anne Gilliland proposes a set of rights relating to what she terms "participative description" (2014). In this presentation I explore a complementary set of appraisal rights with reference to human rights and social justice agendas.

3:45 – 6:00 | Callery Lecture and Reception | Frick Fine Arts Building Auditorium

The inaugural lecture in the Bernadette Callery Archives Lecture Series will be held in conjunction with the Archives Educational Research Institute (AERI) being held at the University of Pittsburgh; the lecture is free and open to the public. The lecture series honors the memory of Dr. Bernadette Callery who was a member of the iSchool faculty and who taught in the Archives specialization in the Library and Information Science program. Previous to joining the faculty, Dr. Callery was the Museum Librarian at the Carnegie Museum of Natural History. Before her death, Dr. Callery thoughtfully established this lecture, which was funded through a generous bequest.

Follow the Bodies, Follow the Names: One Art Historian's Search Through the Archival Remains of the Civil War Dead

Kirk Savage, University of Pittsburgh

During the Civil War the problem of the "unknown dead" became a national crisis. On both sides of the conflict, hundreds of thousands of soldiers who died on the battlefield or in makeshift hospitals or in prison camps ended up as lost bodies, in unidentified graves or no grave at all. Bodies became severed from their names; or, in archival terms, the material object (the corpse) lost its metadata (the headboards or gravestones that physically linked the name of the dead to the bodily remains).

The crisis of the unknown dead was, therefore, an archival crisis, which resulted in the proliferation of new archives devoted to the common soldier. These included cenotaphs (empty tombs) and public monuments inscribed with names of the dead, on a scale never before seen. In this paper I will reflect on the process of following bodies and names through these myriad archives, a process greatly enhanced by digital tools. On an individual level the process looks much like family genealogy, but on a collective level the process speaks to cultural shifts linked to evolving concepts of family, nation, and sacrifice.

6:00 | Dinner on your own

Friday, July 18

7:30 - 3:00 | Field Trips

Busses will pick up participants in front of SIS as follows:

- 7:30 am | Fallingwater
- 9:00 am | Preservation Technologies
- 9:00 am | Archives Service Center

Frank Lloyd Wright's Fallingwater – pre-registration required

Built between 1936 and 1939, Frank Lloyd Wright's famed Fallingwater was the vacation home of the Kaufmann family, owners of the Kaufmann's Department Store. The AERI trip participants will be bussed to and from the grounds, tour the home, have lunch at the site, and attend a discussion with the Director of Preservation and Curator of Education. The first 30 AERI participants to sign-up for the Fallingwater trip during the registration process will be included in the arrangements and asked to contribute \$20 to offset the trip costs. Participants will leave in the morning and return to Pittsburgh in the late afternoon. Learn more about the Fallingwater trip (and even watch the "Fallingwater-cam") at www.fallingwater.org. If you

want to read about one of America's most famous domestic dwellings, check out Franklin Toker, Fallingwater Rising: Frank Lloyd Wright, E.J. Kaufmann, and America's Most Extraordinary House (Knopf, 2005). There is a fabulous museum shop at the site.

Preservation Technologies

Preservation Technologies, located outside of Pittsburgh in nearby Cranberry, has been a leader in preservation services for libraries, archives, and museums since its opening in 1992. AERI participants who attend this trip will tour the facilities and new MediaPreserve Laboratory. Lunch and bussing will be provided. Participants will leave in the morning and return to Pittsburgh in the early afternoon. Learn more about Preservation Technologies, MediaPreserve, and the company's patented mass deacidification process at www.ptlp.com.

University of Pittsburgh Archives Service Center

The Archives Service Center is home to the University of Pittsburgh's archives and collections that document the history of Western Pennsylvania. University of Pittsburgh transportation will be provided to the participants of this morning excursion. Learn more about the Archives Service Center at www.library.pitt.edu/archives-service-center.

4:00 – 5:00 | EASP Session: EASP Wrap-Up-Session | 3rd Floor Quiet Study SIS

Kelvin White, University of Oklahoma

EASP participants will provide feedback on their experiences at AERI 2014 and discuss future career goals.

AERI 2014 Poster Session Abstracts

Abstracts and titles reflect the information provided by the participants as of 6/1/14.

The Mobile Forensic Imagination: Ephemeral Messaging Apps, Telephony Metadata, and Born-Networked Records

Amelia Acker, University of Pittsburgh

The ubiquity of text messaging, SMS gateways to the Internet, and the increased use of smartphones has led to what market forecasters have called the next "killer app" in mobile ICTs based upon a new market of messaging applications ("apps") that allow users to send enhanced messages, including video, picture, and text in a variety of new ways with mobile devices. Many of these new messaging platforms use next generation mobile networks and Internet Protocol to transmit messages, encrypt them, and auto-delete messages shortly after recipients have received them.

The history and development of SMS standards and protocols have had great impact on how data is transmitted and collected across third and fourth generation mobile networks today, including how text messages have emerged as digital records (Caswell, 2009), how texts and their metadata have been enrolled in state surveillance programs, and as a new digital format that influences personal and business communication practices (Acker, 2014). Text messaging applications also shape the ways we create, curate, and appraise our personal digital collections. While many social scientists have studied how text messaging influences how we speak, think, and create relationships, little work has examined how texting practice relates to the rise of ephemeral messaging apps which rely upon smartphone operating systems and next generation mobile networks for transmission, encryption, and deletion. How are ephemeral messaging apps different from native texting clients on mobile phones and how do they incentivize use through automatic deletion, encryption, or obfuscation? How should archivists engage with these emerging appraisal practices supported by new messaging apps?

This poster will present an overview of how ephemeral messaging apps work and are popularly understood, and then show how each have influenced a new kind of mobile forensic imaginary, including new appraisal practices with mobile records. First, I present an overview of some recent cases in the United States where policy and legislation have expanded and enrolled text messages and mobile telephony metadata as electronic communications and digital evidence. Second, I examine the emergence of a mobile forensic imagination with the rise of mobile messaging apps that tout obfuscation by deletion or expiration after being received. For example, Backchat (2014), Confide (2014), Snapchat (2013) and Wickr (2013) play with popular perceptions of the security, authenticity, ephemerality, and longevity of messages created with mobile devices.

The promise of ephemerality and complete deletion with new messaging apps points to the emergence of a mobile forensic imaginary built upon popular understandings (or misunderstandings) of mobile telephony metadata, born-networked records, and personal digital archives created with mobile ICTs. How does this imaginary motivate use and appraisal practices? This paper explores the emerging role that telephony metadata and the mobile forensic imagination is playing in personal digital archives created with mobile devices. By examining the development of text messages as born-networked records, the rise of ephemeral messaging apps, and their subsequent mobile telephony metadata, the current study aims to present some of the implications and broad potential that the analysis of infrastructure, metadata, and born-networked records have for archival researchers.

The Hassan II Prize for Manuscripts and Archival Documents: the Tension Between Archival Disclosure and National Heritage in Morocco

Sumayya Ahmed, University of North Carolina Chapel Hill

In his attempt to understand what befell Moroccan private libraries and private manuscript collections during the nineteenth century, Binbine (2004) attributes the "miserable" condition which many came to be in to purposeful hiding and concealment during the colonial period. As he explained, when they "perceived the readiness of foreigners from Europe to take control of the country, Moroccans sought refuge in the concealment of [their] books." In their efforts to protect valuable manuscripts, they "built walls around collections or buried books deep within the Earth."

In the post-independence enthusiasm to build up and take stock of the national manuscript collection, the Moroccan Ministry of Cultural Affairs instituted the Hassan II Prize for Manuscripts and Archival Documents. The prize, begun in 1969 was intended to locate and preserve, originally through microfilm, and currently with digitization, important caches of manuscripts and archival records found only within private collections. The Hassan II Prize intends to create a public archive of privately held manuscripts, valorizing them as part of national heritage, while negotiating manuscript holder reluctance and fears regarding disclosure of their collections.

The number of manuscripts in private hands in Morocco is believed to far outnumber the quantity that is currently held by public libraries and archives. For many owners of manuscripts and archival documents, archival silence "is a forceful strategy of resistance" (Carter 2006, p.227) that keeps their (often family-inheritance) property beyond the grasp of an authoritarian monarchy which has been known to confiscate collections in the name of "national patrimony."

The specific kind of archival documents desired by Hassan II prize officials are official, royal documents, records related to Islamic jurisprudence, or non-binding religious legal opinions (fatwas) which are termed "official" papers; and private correspondences, memoirs, chronological histories, poetry, songs, studies, essays, etc, which are termed "private" documents. The manuscript owners who are awarded the Hassan II Prize receive monetary compensation, but are free to do with the manuscript what they want. They are requested however, to allow a digital copy of their document to be made that will reside at the National Library (Laroui, 1990).

National libraries and archives, while taking it upon themselves to be custodians of national heritage, cannot reflect all aspects of a society (Carter, 2006). M'kadem and Nieuwenhuysen (2010) note that the importance of private collections in Morocco stems from the alternative and local versions of history they present. In addition, private collectors of manuscripts, who often hold both physical and intellectual authority over the manuscripts, can provide provenance information couched in family and local history.

In the poster, we explore how the Hassan II Prize for Manuscript and Archival Documents, as a government-sponsored initiative, uses a "top-down custodial" model to respond to the guardedness of owners of private archival collections in Morocco. As an example of a successful negotiation of access without the perceived loss of possession, evaluation of the prize can inform future archival discovery projects not only in Morocco, but in other locales where disclosure of community archival documents is a sensitive issue.

Curation in the Wild: Developing Digital Preservation Assessment Models for Use in Community Documentary Projects

Heather Barnes, University of North Carolina Chapel Hill

This poster will outline and present preliminary research in support of ongoing dissertation work, currently at the literature review and pre-comprehensive exams phase.

My presentation will describe the scope and extent of dissertation research that aims to explore the intersection between community media activism and digital preservation. Organizations that work with digital storytelling methods in order to conduct advocacy generate a diverse collection of digital artifacts. At the same time, advocacy organizations are mission-focused. While they may be interested in documenting their work, they may lack the formal infrastructure, funding, and staff to manage digital records to the same standards as institutional or large-scale corporate archives. How does organizational history and identity persist in the current digital environment, and what are the strategies by which organizations develop a sense of their history and identity via digital media? How does their media creation in terms of advocacy, record keeping, and marketing (among other functions) intersect with the need to collect, organize, and preserve their digital records? Best practices for digital preservation are being developed by and (largely) for formal library and archives contexts, with a few programs that aim to support entry-level engagement in digital preservation. A key component of my dissertation will examine the fundamental activities in which community organizations must engage in order to mitigate risks to their digital records.

The other component of my dissertation will focus on the challenges and possibilities of collaborative partnerships across archives and community organizations. Using a series of case studies, the research will examine working models for integrating the digital records of activist organizations within formal archival settings, and models for outreach on the part of archivists and libraries. For example, the Witness program "partners with networks, coalitions and locally based nongovernmental organizations (NGO) that have made a commitment to use video to advance human rights." What are some of the challenges to these kinds of organizations in terms of collecting documentary materials? Working with community advocacy organizations requires a knowledge of and sensitivity to the need for organizations to protect both their mission and their members. Engagement with community groups for the purposes of supporting their archival strategies could be considered a type of archival activism or outreach. What types of models for engagement, activism, and outreach exist for archivists and librarians interested in extending services beyond the borders of their home institutions? How can participatory models strengthen the ability of community organizations to provide effective stewardship of their digital records?

Footprints Through Time and Space: Re-imagining Description in the Archival Multiverse Through a Rich Community Case Study

Belinda Battley, Monash University

Collective memory is an essential part of community identity. Records help communities construct and preserve their collective memory, supporting community values and survival, and protecting their rights. To maintain control over collective memory, people in those communities need control over records creation, capture, access, use, sharing and interpretation.

The research I intend to carry out for my PhD addresses the fit between Australasian methods of archival description and collective memory construction in communities.

The Australian series system is said to support description of records in multiple contexts, to allow multiple views of records, to allow for more accurate description of born-digital records, and for more open linking to allow for searching across multiple collections, making archives more discoverable for the wider community. However, often users are not finding these benefits, and my study will investigate whether the problem is with the design of the series system or the way it has been implemented.

I plan to use a collaborative, mixed-methods approach, and involve two different communities, to which I belong – the Auckland University Tramping Club (AUTC) and the archival profession in Australasia. With fellow AUTC members I will build a model of the way records contribute to collective memory creation and maintenance in the AUTC, and with subject matter experts in the archival profession I will build a model of the way they envisage the concepts of the Australian series system. I will then compare the two models to analyse their fit. Finally, I will test both models against real-world implementations of the Australian series system to determine how well either model is met by existing descriptive practice.

The poster will summarise the background to the research and show a simple model of the intended research design.

Artists in the Archive: an Artist-in-Residence Program at the City of Portland Archives & Records Center

Kathy Carbone, University of California, Los Angeles

The poster I would like to present at AERI is a view into an artist-in-residence program currently underway in a city archive. I am in the middle of an 18-month long UCLA IRB approved study of the Artist-In-Residence program at the Portland Archives & Records Center (PARC) in Portland, Oregon. In this study I am examining the following things: (1) why and how the City of Portland Archives and Records Center initiated an artist-in-residence program; (2) the nature of this particular collaboration between a city archive, its archivists, the artists, and a local arts organization; (3) how the artists conceptualize the archive and create works of art based on Portland's historical records; and (4) whether or not the artists' work in the archive is providing new knowledge to the archival field about artists as an archives user group and about the nature of collaborative projects between artists, archivists, archives, and arts organizations.

The study involves the following data gathering activities: (1) conducting two sets of group and individual interviews with the archivists, artists, and the public art manager from Portland's Regional Arts & Culture Council (RACC); (2) observing the artists and archivists working together in the archive; (3) observing a number of the artists' performances and exhibitions; and, (4) gathering all of the documentation generated from or about this Artist-in-Residence program.

As of February 21, 2014, the following data gathering activities have been completed: (1) the first set of individual and group interviews; and, (2) an observation session of the artists and archivists working together in the archive. The gathering of documentation about and from the residency is in continual process throughout the duration of the residency.

From the data gathered and analyzed thus far the poster will consist of text and images that suggest and provide answers to the questions I am pursuing, outlined above. Additionally, it will explain how the artists are engaging with archival records to reveal and respond to silences in the archive. Through artistic interventions with the historical record, these artists are using myriad strategies to counter and imbue official records with unrepresented voices, giving voice and representation to those silenced in the archive. In doing so, the artists and their work challenge and subvert the officialdom of the archive.

Perceptions of Records in Australian Government Agencies in the Age of Social Media: A Theoretical Framework

Christopher Colwell, University of Technology, Sydney

This research aims to explore other disciplinary perspectives on the nature of the record in an age of social media with a view to promoting discussion and consideration of a wider and more interdisciplinary perspective on the nature of the record and assisting practitioners and archival authorities to extend their understanding of the socially constructed nature of records in the Australian public sector in an age of social media.

The definitions of records with which record management practitioners work do not recognise the socially constructed nature of records. There are two predominant views of organisational records - that their primary purposes are to serve as information resources or as evidence of business activity. (Bak 2010; Cox 2001; Kennedy & Schauder 1998; Sampson 2002). These views have and continue to have implications for the management of records within an organisation.

Yeo (2007) notes that emphasising either evidence or information is limiting as it undervalues the complexity of records and that a more representational view of records is multi-discilpinary and "embraces a wide spectrum of understanding". However, limited research has taken place into users perceptions of records (Lemieux 2001).

The same word may be interpreted differently by different people with varied backgrounds and words and concepts such as data, information, knowledge, records and document are often confused with one another. These differences in definition can reflect existing disciplinary schools of thought (Yusof & Chell 1999) or particular regulatory recordkeeping contexts.

The current post-positivist trend in the archival and records management literature has only just begun to explore the nature of records as socially constructed entities (Trace, 2002). Organisational culture, information technology and information culture have an impact on the perceptions of individuals towards records (Oliver 2010). A records user in an organisation may also be the record creator, so the use and utility of records is also tightly linked to the individual and their work practices (Borglund & Oberg 2008).

Record formats are also changing considerably and a user's conceptualisation of the record may still be linked to format (Lemieux 2001). They may be unable to see ephemeral digital information, such as blog post or a tweet, as a record.

The theoretical framework for this study, to be outlined in this poster, is informed by a variety of theoretical perspectives from practice theory including the Records Continuum model (Upward 1996, Upward 1997), Giddens' (1984) structuration theory, and Foucauldian discourse analysis (Rainbow, 1984) as well as sense-making theory (Dervin, 1992) and sensemaking in organisations (Weik, 1995).

No Title Provided

Elizabeth Daniels, Monash University and University of Melbourne

This poster sets out my proposed PhD research area; I hope to conduct an exploratory style study into the potential role of Archives and records on 'Othering', and if this relationship has identifiable patterns that can be influenced and managed.

The concept of 'othering' is not new, and has been discussed and theorised about extensively in the literature surveyed by key authors in this field including Tzvetan Todorov (1984), Anthony Pagden, Simone De Beauvoir, Edward Said, and Michael Foucault to name a few. My research aims to compare different instances of 'Othering' to see if any patterns or commonalities can be gleaned. Many authors such as Kiernan have written volumes comparing different forms of genocide, while theorists such as Hannah Arendt have explored the capacity of human beings to perpetuate such atrocities (Arendt, 1951). The events and behaviours studied by Arendt, Kiernan, and

others could be seen as potential (although not completely) consequences of 'othering', I am interested in the process of 'othering' itself. How it works, how 'othered' identities are created, enforced, and communicated. In particular the role archival institutions, archives and records play in the process of 'othering'.

Any research that explores the concept of 'othering' also needs to address theories of the self, I will draw heavily on the existing literature concerning the self, exploring theorists such as George Herbert Mead. Of particular focus will be the role of social interaction in creating the self, and most of all the role of the generalised other in the creation of the self.

Prominent Australian scholars in the archival field have long recognised the social power that archival institutions, archives and records hold (McKemmish et al, 2005), and this has led to the development of radically new ways of managing and accessing records, examples include the find and connect project at Melbourne University in partnership with the Department of Families, Housing, Communities and Indigenous Affairs, Visualisations based on actor network theory and the Country Lines project at Monash University. Archival theory has also developed to represent the fluid and multifaceted nature of meaning and interpretation. Key examples include the development of Continuum theory (McKemmish et al, 2005) which could be indispensable in better understanding particular social phenomena.

This research will aim to analyse and explore whether these new theoretical and technological developments in the archival realm can play a role in undermining 'othered' identities. The key theory here is Hegel's dialectic (Redding, 2010) in which the self always exists as becoming. As archives traditionally capture snapshots they freeze identities into beings, rather than becomings. I aim to explore whether 'othering' often serves to do the same thing, meaning people do not feel the need to engage with 'others' on a human level as they already believe they know the totality of that person through stereotypes and other constructs.

Data Documentation and Research Use in Museum Contexts

Morgan Daniels, University of Michigan

The data deluge and recent advances in data collection and analysis techniques have lead to an increasing interest in the use of datasets by researchers who did not create them (referred to as data reuse). Recent studies explore the difficulties of making data accessible for reuse as well as the problems of understanding datasets created by others (Akmon et al. 2011, Zimmerman 2008). One important data provider is largely overlooked from these discussions: the museum. As collectors and curators of objects recording cultural and natural history, museums have long made data accessible to researchers. Opportunities for including museum data in larger datasets are only beginning to emerge, as consortia develop tools for cross-collection access to museum data. Little is known, however, about the needs of researchers for the successful reuse of museum data and how well these data represent the underlying collections. This study examines the practices of botanists and archaeologists in their use of collections from two museums. Based on 45 semi-structured interviews with botanists, archaeologists, and museum staff, this work uncovers the information needs of research users, how researchers perceive the relationship between museum objects and their descriptions in the research process, and the impact of museum practices for digital representation on reuse.

My findings highlight the importance of contextual information concerning research design behind data (object) collection as a key component of successful reuse. For example, the context in which an object was found is of paramount importance in both judging the quality of data and in making use of it for research, whether that is information about the stratigraphic layer in which an archaeological object was discovered or a description of the habitat of a botanical specimen. Both groups of researchers have experienced changing standards and technologies for recording contextual information, making some older data less useful for analysis. Archaeologists need to understand the provenience of an object, linking it to a particular location. Objects lacking that level of

detail can still be useful, but must be approached with different research questions. Likewise, botanists studying the geographic range in which a particular species is found require a degree of certainty about location identification to judge whether a specimen may be included or removed from their dataset. The findings of this study have important implications for the representation of museum objects for research audiences. They are also relevant to researchers studying data reuse, museum staff creating representation systems, and data curators working with data from multiple, heterogeneous sources.

Lots of Copies Keeps Stuff Safe: Examining the USDocs LOCKSS Network as a Socio-Technical System Rebecca Frank, University of Michigan

The LOCKSS program is "an open-source, library-led digital preservation system built on the principle that 'lots of copies keep stuff safe'" ("What is LOCKSS?," 2013). A LOCKSS network is a system in which multiple institutions agree to maintain copies of digital content. LOCKSS is modeled on the system used by libraries to preserve physical content through duplication of resources across multiple distributed organizations, "the phrase 'distributed digital preservation federations' is being used increasingly to describe cooperatives of geographically-dispersed institutions who are banding together to form solutions to the digital preservation problem" (McDonald & Walters, 2010, p. 1).

This poster will report on results from a study examining the LOCKSS-USDocs program as a second order technical system (Van der Vleuten, 2004). In particular, the LOCKSS-USDocs program is a network that is built upon the pre-existing infrastructure of the Federal Depository Library Program (FDLP). The primary focus of this study is the relationship between LOCKSS, the FDLP, and the libraries that serve as members of the network.

This study seeks to address the following research questions:

- 1. How did the USDocs network develop??
 - a. What were the roles of the individual organizations that belong to the USDocs network?
 - b. How do members of the USDocs network describe the relationship between the LOCKSS network and the Federal Depository Library program?
- 2. Does the development of the USDocs network fit van der Vleuten's theory of about the development of second order technical systems?
 - a. Were the member institutions able to leverage existing path dependencies when creating/joining the USDocs network? If yes, how?
 - b. Does the work of individuals within the USDocs network map to scales of infrastructure (enacting technology and organizing work)? If yes, how?

This study uses a theoretical framework that draws upon risk and disaster studies literature, as well as literature addressing infrastructure development and the development and adoption of standards. I examine LOCKSS as a risk mitigation program that relies upon large groups of actors adopting standards in order to achieve their individual and common goals of data preservation and organizational continuity of service. I am particularly interested in exploring the ways in which the LOCKSS program leverages existing systems (research libraries and the FDLP) in order to offset risk associated with the preservation of digital government documents.

Data collection for this project is currently underway and includes semi-structured interviews with members of the LOCKSS-USDocs network. This poster will report on the results of those interviews.

Photograph, Organize, Display: How Individuals are Preserving a Record of Street Art

Ann Graf, University of Wisconsin-Milwaukee

Ephemeral public art, referred to by several names such as temporary art, urban art, street art, graffiti, reverse graffiti, sticker art, and variations of community art, public art, ecological or earth art and other forms of art which are impermanent in intention or understanding, are considered by many as important parts of the cultural record that deserve to be preserved. While the artists themselves are often using photography and video to record their own works, the majority of such collection and preservation online is being done by amateur or community archivists, civilians, so to speak, with a love and appreciation for the medium.

Not a call for the archives community to take up this task, but rather an acknowledgement of what is already taking place, I am proposing an examination of the work of what I will here term "collectors" as they use photography to document, organize, preserve and present such public and temporary artworks from the streets on websites, blogs, Facebook pages, Flickr streams and the like across the Internet. Questions that arise from consideration of this research include: What exactly is being captured? How are the images being described (such as artists' names, locations, dates, etc.)? What terminology is being used to describe this type of artwork, the process used to collect and photograph the artwork, and any differentiating language used for the various types of artwork collected? Why is this kind of naïve archiving taking place in the first place – why do people photograph these works, collect, organize, describe, display and maintain such collections online – and how might the value of these types of art be explained or justified?

Methods proposed for examining and hopefully answering these questions include textual analysis of any information provided by the collectors, such as that found on "about" pages of blogs or introductions to collections, analysis of descriptive text attached to individual images (including any tags), and any textual information featured in the images themselves, again such as artists' names or commentary, and determination of the categorization of types of information gathered, such as titles, sizes of original work, locations, styles, materials and forms. The various online platforms used may also be found to influence how and what is being described, based on limitations placed on text, tags, image parameters or varying abilities to search posts, apply links to outside information or gather like posts into collections or sets.

I envision this type of research leading to a deeper understanding of the practices of those who create individual community archives and supporting the development of intuitive online tools that may serve to educate amateur collectors on important aspects of the archive process, encouraging adherence to archival standards.

Out of the Archival Closet: Opening the Historical Record to Black Lesbian Lives

Dalena Hunter, University of California, Los Angeles

This dissertation explores how archivists acquire and describe materials created by and about black lesbians at three sites: June Mazer Lesbian Archives, Schomberg Center for Research in Black Culture, and Mobile Homecoming Project. Deploying a theoretical framework based upon Critical Race Theory and black feminist theory the dissertation focuses upon the ways archivists approach silences in the archival record due to microaggressions, dissemblance, and intersectional identity. This project attempts to understand the relationship between archival processing practices, institutional recordkeeping culture, and the historical record using case studies and grounded theory methodology. This dissertation contributes to postmodern archival scholarship and ethnic and gender studies scholarship that explores the connection between historical narratives and recordkeeping cultures.

No Title Provided

Noah Lenstra, University of Illinois at Urbana-Champaign

Trends from both within and without public librarianship create new opportunities for libraries to serve the public's interest in archives and heritage information. Based on a workshop series in Illinois, this article presents exploratory findings on: a) existing public library heritage and archival services and b) how cyberorganizing can enhance these services. Public libraries offer heterogeneous heritage and archival services in local contexts composed of multiple actors and institutions. Improving this service area involves organizing within libraries, across local institutions, and among individuals with diverse interests. Part of this organizational work involves digital technologies, but people are the core element in organizing everyday heritage services. This research focuses on public libraries outside of major metropolitan areas.

Sustaining a Community of Records: One Family's Odyssey

Jennifer Marshall, University of South Carolina

My father was an avid genealogist. For over forty years he researched our family's history. Innumerable hours of my childhood were passed in the local history rooms of public libraries, courthouses, and cemeteries of western Pennsylvania. I shared his interest in family history and I enjoyed constructing possible stories based on his discoveries, but I never developed – and therefore never fully understood – his passion for genealogical research. Preserving our family's history – as represented in the records he amassed and created over the years – was never far from his mind. It was this aspect of his genealogical endeavors that I could fully appreciate, as the documentation resulting from his research became ever more fascinating to me during my archival studies.

It was always understood that I would be the keeper of the family archive one day, and that day arrived much sooner than anticipated when my father passed away unexpectedly at the age of sixty-one in summer 2012. Though it was a difficult time and there were more immediate concerns to be addressed than the family archive, I was confident in my abilities to preserve it. In the months to come, however, I would realize that I had become far more than the keeper of the family's archive. Without anticipating it, I had become the center of a community of records, for over the years my father had forged connections and developed relationships with relatives far and near, distant and not-so-distant. Following a period of condolences from many of these relations, I found that I was receiving – much sooner than expected – requests for information related to family history, and more uncomfortably, several requests for the entire archive as well.

I had been prepared to take on the preservation of my father's genealogical archive and had anticipated the need to plan for its accessibility in some form and at some point. The recognition that there was a community of records surrounding this archive, however, and that by virtue of the fact that I was the archive's keeper I now had the responsibility of cultivating this community (or letting it wither), was a daunting realization. Though the situation I found myself in was deeply personal, in the past two years it has served as the catalyst for my exploration of questions related to how genealogists seek, use, and preserve records; how genealogists develop and function as communities of records; and the relationship of personal and community archives. It is these issues that this paper will examine.

"This isn't archive footage anymore": Recent Representations of Records in Motion Pictures

Eleanor Mattern, University of Pittsburgh Lindsay Mattock, University of Pittsburgh

Archivists who followed the Best Picture Nominees for the 2013 Academy Awards would have noticed there was a recurring character – records. The winning film, *Argo* depicts the rescue of six American hostages during the Iran Hostage Crisis. *Lincoln*, praised for Daniel Day Lewis's portrayal of the Sixteenth President, presents a look at Abraham Lincoln's Presidency during the passage of the Thirteenth Amendment. The most controversial of the three, *Zero Dark Thirty* chronicles the events leading to the capture of Osama bin Laden. While archivists and archival repositories are absent from these three films, records and records creation play a central role in the development of each of the stories.

This poster will analyze the depiction of records and records creation in these three films through the use of the framework proposed by Barbara Craig and James O'Toole in their analysis of representations of records in art. Craig and O'Toole argue that the way in which records are depicted can lead to an understanding of how the creators and audiences of art understand records, suggesting that these representations may further our understanding of the "cultural penetration of archives." The authors suggest that in art, records are depicted in a number of ways: as props, as representations of specific documents, as the central subject, and as information objects that are created and used. We add to Craig and O'Toole's framework additional categories: the integration of original documentation into the films themselves, and the use of source material that has an affective influence on the mise-en-scene. More than merely representing documentation that may exist, as moving images these films make use of archival footage of the depicted events.

Software Preservation Network: Ensuring Long-term Access to Proprietary File Formats

Jessica Meyerson, University of Texas at Austin

Proprietary file formats are an obstacle to access for born-digital electronic record within cultural repositories across the country. Though contemporary third-party tools have broadened access to some proprietary formats, many file formats cannot be accessed (and, thus, appraised) without using the original, proprietary software application that created them. To address this issue, the author proposes a model for a Software Preservation Network, which expands on existing preservation network models like LOCKSS. The author will report on work in this area and local software round-up/recycling activities. Key questions to consider include: What legal challenges and opportunities face a software preservation network? What types of metadata should archivists use to document software use requirements, and what are the appropriate parameters for network membership? How can we systematically identify orphaned software? How do we begin a dialogue between cultural heritage repositories and the software industry?

Curriculum Development for Archives and Records Management in Thailand: The Challenge of an Emerging Profession

Waraporn Poolsatitiwat, University of Liverpool

The curriculum currently taught in universities in Thailand needs to be developed to "meet the characteristics of the new global professional and the new knowledge economy" (Pimpa 2011, p.275). It is necessary to propose a model for curriculum development suitable for preparing new professionals in an evolving area of professional practice like archives and records management. However, to success in this aim, the following factors have to be considered.

1. All curricula taught in Thai tertiary institutions must be developed to comply with the Thai Qualification Framework for Higher Education (TQF) by 2013 (Ministry of Education, 2009). It is a major factor that may shape the model of curriculum to be used in most universities in Thailand after 2013.

- 2. The model for understanding professional learning proposed by Reid, Dahlgren, Petocz, and Dahlgren (2011) identified the crucial elements for transferring from graduate to working professional. Their concepts of (1) knowledge for professional, (2) learning for work, (3) professional identity, and (4) professional pedagogies are highly relevant in designing study programmes for professional education. To date, they have not been applied in archives and records management; nor have they been considered in the context of Thailand and East Asia.
- 3. The problems of archival education have raised significant questions for consideration, particularly how to (1) develop archival science as a discipline, (2) improve the quality of the professional archivist, and (3) enhance recognition of the profession itself and of the professional archivist.

Since the model for curriculum development for preparing new archivists has not been proposed in Thailand. This proposed research will represent an original case study of curriculum development for a new, emerging profession.

Research Aim:

To propose a model of curriculum designing for preparing archivists in Thailand to:

- (1) Meet international standards and contemporary need
- (2) Fit with Thai environment and culture
- (3) Comply with Thai educational system
- (4) Achieve market need

Research Questions:

- (1) What are the significant factors contributing to the design of new curriculum higher education in Thailand?
- (2) What are the elements within a curriculum necessary for preparing a future professional?
- (3) What is the most suitable model of curriculum development for preparing professional archivists in Thailand?

Methodology:

Since main data could be collected from both human and documents regarding policy, regulation, and curriculum, the method used in this study would be a mix method including literature based and in depth interview

Archival Diaspora, Custodial Order, and the Legacies of Chaos: Responsibility in Managing Dispersed and Dismantled Photograph Collections

Gina Rappaport, University of Maryland

It is an archival premise that the value of information in an archival collection relies on the maintenance of that collection's integrity; we observe *Respect des Fonds*. But while most archivists tacitly agree that archival processes must align with archival principles, in practice this is widely interpreted, particularly in the processing of photograph collections and it is usual for archival theory to be applied differently to textual and visual materials. With respect to photographs, two approaches are common: one emphasizes the medium's physicality and bases arrangement and description largely on format, while the other emphasizes the individual photograph, basing arrangement and description largely on image content. Both approaches downplay the photograph's nature as an archival record and its status as a component of a collection; a part of a larger whole. Further complicating these approaches to photographs is the frequency of dismantled and dispersed collections.

Whether due to an archival "diaspora," where dispersal took place through the agency of the creating body or its inheritors, or to the dismantling of a collection due to inexpert custodianship, the resulting loss of information can be significant. Because of use protocols and reading room rules, it can be difficult if not impossible for researchers to make the kinds of connections between collections and their components that archivists can, thus the question: what are the responsibilities of the archivist in restoring--actually or virtually, physically and/or intellectually—dispersed collections, and noting for the researcher related or separated materials held at other institutions? When Respect des Fonds tells us we must preserve the information inherent in the context of the collection and its creation, as well as the information imparted by the order of and relationships between the collection components, how does this principle – practically as well as conceptually - extend to photographs?

This poster will provide several examples of dispersed and dismantled photograph collections and the kinds of information that can be revealed only through reunifying collections or explaining the collection's diaspora. These examples will highlight the impact on research if such collections are left untreated, as well as if dispersal is addressed. Outlined will be some of the ways in which archival principles may be overlooked or misapplied with respect to photograph collections, and the archivist's role in presenting and representing dispersed and dismantled photograph collections.

What Personal Information Management and Archiving Strategies Do Individuals Use that Compare to the DCC Curation Model?

Vanessa Reyes, Simmons College

The digital era has redefined and reshaped the nature, scope, and use of personal information. Individuals are continuously collecting and storing an increasing volume of digital personal information in convenient portable devices. This qualitative research study investigated how academic users manage and archive their personal digital information. Specific focus was placed on learning how graduates of different disciplines managed their personal digital information. Twelve graduate students from diverse disciplines were interviewed, provided with a background questionnaire, and then placed into focus groups that matched their personal information management methods. One focus group discussion was guided by questions that made reference to a model the author created in a previous study of how graduate students of diverse disciplines manage their personal digital photographs; while the other group's discussion focused on questions that made reference to the Digital Curation Centre's DCC lifecycle model.

The majority of students in the present study reported that they primarily manage their personal digital information on their laptop computers and cellular phones. On average students responded that they typically produce over 100 files per month. At least one student from each graduate program claimed to store most of their personal digital information on online cloud storage services such as Google Drive and Drop Box. Overall students related more to a model that was previously created based on results from a previous study rather than to the DCC Model. These results have provided great insight into the process of managing digital information and may reveal a need for the reexamination of best practices and accepted standards.

Who's Afraid of File Format Obsolescence? Evaluating File Format Endangerment Levels and Factors for the Creation of a File Format Endangerment Index

Heather Ryan, University of Denver

Much digital preservation research has been built on the assumption that file format obsolescence poses a great risk to the continued access of digital content. In an endeavor to address this risk, a number of researchers created lists of factors that could be used to assess risks associated with digital file formats. This research examines these assumptions about file format obsolescence and file format evaluation factors. This research culminates in the creation and initial test of a file format endangerment index comprised of a simplified set of file format endangerment factors.

This study examines file format risk not as file format obsolescence, but under the new lens of "file format endangerment," or the probability that information stored in a particular file format will not be interpretable or renderable in human accessible means within a certain timeframe. Using the Delphi method in two separate studies, I collected expert opinion on file format endangerment levels of 50 test file formats, and collected expert opinion on the relevance of 21 factors as causes of file format endangerment.

Over half of the expert participants who were asked to rate the test file formats indicated that they did not have enough experience with seven of the original 50 test file formats to rate them. These formats were removed from subsequent questionnaires, leaving a total of 43 test file formats. Experts expressed the belief that information encoded in the rated file formats will remain accessible in the next 11-20 years, and, overall, digital information encoded in these formats will be accessible for 20 years or more. Furthermore, expert participants who were asked to rate the factors rated only 14 of the original 21 factors as at least somewhat relevant as a cause of file format endangerment.

I conducted a third study with a special reviewer who I asked to collect information on 14 factors for each of the 43 test file formats, and then use this information to inform his rating of the endangerment level of the file format. After performing this task, I asked the special rater to rate each of the 14 factors for relevance as a cause of file format endangerment.

I applied the results of the two Delphi studies and the special rater study to the creation and testing of a file format endangerment index. The findings showed that only three of the dozens of file format evaluation factors discussed in the literature exceeded an emergent threshold level as causes of file format endangerment: the availability of rendering software, the availability of specifications, and the presence of support through communities and third party developers. I conducted an initial test of this index by reviewing the information collected by the special rater for these three factors and calculating file format endangerment scores for the 43 test file formats, based on the information provided. I compared these scores with the file format endangerment rating scores collected in the file format rating Delphi exercise, which revealed similar results, demonstrating external validity of the measure.

Providing Remote-yet-Restricted Access to Born-Digital Electronic Records

Seth Shaw, Clayton State University

This poster will document the creation and setup of a system to provide access to electronic records at the David M. Rubenstein Rare Book & Manuscript Library using remotely accessible virtual machines via an online reservation system. The poster will explain the technical infrastructure and workflows necessary for setup and use.

Personal Digital Archiving: Strategies, Challenges, and Affecting Factors from a Quantitative Perspective

Donghee Sinn, University of Albany (State University of New York)

This poster reports the status of current personal digital archiving in terms of archiving practices, challenges, and other technological and personal factors. Many studies examining personal digital archiving practices have taken qualitative approaches to explore perceptions and behaviors. There has not been much research with quantitative methods to find the general patterns of identified behaviors. Based on the findings from existing qualitative studies, this study created an online survey to quantify personal digital archiving practices and related phenomena. The survey was employed to investigate to what extent people show a certain behavior or feel a certain challenge when archiving personal digital content and if there were clear associations among the factors surrounding personal digital archiving practices that previous qualitative studies have identified and assumed. Some of the findings of this study regarding specific personal digital archiving practices were in accordance with existing studies. However, the associations between digital archiving challenges and archiving practices were not observed statistically significantly as assumed in previous studies. General technology efficacy and the awareness of the importance of personal records appeared to influence personal archiving practices.

The Left-behind Children Digital Archive(LCDA): Conception and Potential Benefits Biyong Tan, Shandong University

China's rapid urbanization has led to a rising number of left-behind children, who have one or both parents working away from home, leaving them to be taken care of by grandparents or other relatives. The number of such children in China's rural areas has exceeded 60 million, according to a report published by All-China Women's Federation in May 10, 2013. The left-behind children issue has been a serious social problem, and if left unsolved, which will pose a great threat to China's future.

We can search many items from google with keyword "left-behind children" in different government and non-government websites in China and other countries, however, these digital records are very scattered and might be disappeared sooner or later. Thus, I decide to put forward a digital archives proposal - Left-behind Children Digital Archives (LCDA), which might preserve all kinds of archival materials about the left-behind children from government institutions, non-government organizations and individuals. LCDA would record these children's daily lives and provide us useful educational materials and common memory from generation to generation.

No Title Provided

Narissa Timbery, Monash University

The poster that I would like to design will present my research in its early stages. My experience with archives both professionally and personally has centred on Indigenous Australian records.

My PhD research 'Visualising Country: Archiving Virtual 3D Models' is attached to the Monash Country Lines Archive (MCLA) which assists Indigenous Australian communities in the animation of stories that combine their history, knowledge, poetry, songs, performance and language to provide material for intergenerational knowledge sharing and learning. This is achieved through the use of world-class 3D animation to assist the sharing and preservation of knowledge and stories.

Throughout the MCLA project both the MCLA team and community have expressed concern about the preservation and future access of the material not used in the final animation.

The aim of my research is to design and develop an online interactive archive to enable Indigenous communities to access and use 3D models of Australian landscapes (terrains, trees and vertebrate fauna) to create virtual cultural worlds that: 1. Is intergenerational in its appeal and usability 2. Easily customised to individual community needs 3. Upholds archival principles both Archival Science and Indigenous community.

While the research is specifically aimed at the access and use of the 3D models, dependent on the findings of what the partner communities want from the archive, the system may need to be flexible enough to include other material associated with the partnerships.

I hope to examine what are the specific cultural, social, functional and technical requirements for an online archive of virtual 3D models of Australian terrain, fauna and flora. In doing so, explore the concept of a sustainable living archive that reflects community protocols and archival principles through the use of innovative information technologies.

My research will be adopting systems development as a research method within a participatory action research framework. Systems Development as a research method in an action research framework allows me to explore the interface between theoretical concepts and their practical realisation, including the interplay with community needs and information technology capabilities.

I hope to demonstrate my passion for archives and commitment to respectful research.

No Title Provided

Ayoung Yoon, University of North Carolina Chapel Hill

This poster will mainly describe my dissertation proposal, which includes purpose of the study, significance of the study, important concepts employed, and research design, with some preliminary findings.

Data reuse is the term referring to the secondary use of data – that is, not for its original purpose, but for studying new problems. Sharing and reusing data might not yet be the norm in every discipline, but it has become a major concern in many scientific disciplines. Assessing data and finding trustworthy data is an important part of the data reuse process, as data plays a vital role in research and is the basis of all scientific research. Influenced by emerging discussion around data reuse and in light of the importance of trust in data reuse, this dissertation study explores why and how data reusers trust data that are generated by other researchers, using content analysis and in-depth, semi-structured interviews as primary research methods. By employing purposive sampling, a total of 30-35 participants (10 to 12 in education, sociology, and public health – three disciplines that have reuse cultures) will be recruited for this study.

Participant Bios

Amelia Acker

I examine the material production and transmission of records created with mobile phones and their archival consequences. I am interested in the emergence and standardization of new information objects. In my dissertation research I examined the Short Message Service format and text message communication protocols. I consider how technologists, recordkeepers (including archivists), and information scientists are confronting issues of digital materiality and preservation with records created with mobile information and communication technologies. In the fall of 2014 I will join the faculty of Library and Information Science in the iSchool at the University of Pittsburgh.

Sumayya Ahemed

Sumayya Ahmed received her B.A. in Sociology and African-American Studies from Wesleyan University in Middletown, Connecticut. Her interest in the language, culture and literary productions of North Africa and the Middle East led her to pursue an M.A. from the Center for Contemporary Arab Studies (CCAS) at Georgetown University.

While completing her M.A. she also spent time studying Arabic at the University of Qatar at Doha. In 2007, Sumayya was awarded a US State Department Fulbright grant to carry out research on female religious scholarship in modern Morocco.

Sumayya entered the doctoral program at the University of North Carolina at Chapel Hill's School of Information and Library Science (SILS) in Fall 2011 as an ELIME-21 fellow. ELIME-21 is an IMLS sponsored program that works to improve LIS information in North Africa and the Middle East while also advancing the quality of information on that region in US libraries and research institutions. In the summer of 2012 she was awarded a research grant by the American Institute of Maghreb Studies (AIMS) to support research on digitization during an internship in the manuscript department at the National Library of Morocco.

Sumayya's research has focused on the social, cultural and political issues concerning access to and preservation of Islamic and Arabic historic manuscripts in post-colonial North Africa.

Karen Anderson

Karen Anderson, PhD, is the Foundation Professor of Archives and Information Science at Mid Sweden University since 2008 and Professor II at Oslo University College. She formerly worked at Edith Cowan University in Western Australia until 2007. She is an Editor-in-Chief for Archival Science, serves on the Advisory Board of the National Archives of Sweden and is a member of the Swedish Institute of Standards TK546 Committee for Records Management Standards. She was President of the International Council on Archives' Section for Archival Educators and Trainers from 2000-2004, Vice President in 2004-2012 and served on the Committee of the Swedish Archives Association 2011-2014. In 2006 she was made a Fellow of the Australian Society of Archivists.

She is a member of the CEDIF research team http://www.cedif.org/: the Centre for Digital Information Management at Mid Sweden University and also European Team Director for the InterPARES Project: Trust in Digital Records in an Increasingly Networked Society. Her research interests include implementing recordkeeping systems in the digital environment, the development of professional standards and the role of the archivist and records manager in the changing digital environment. She is particularly interested in advancing standards of professional practice through education and training for the community of records managers and archivists and fostering a scholarly approach to professional education. She has a long- standing interest and extensive experience in developing elearning courses and teaching online

Heather Barnes

Currently preparing for comprehensive exams, I am a doctoral student interested in research questions around community storytelling and preservation of informal/ephemeral media. I am particularly interested in the work of activist organizations and the use of media to document and foster their work.

I received a BA from Smith College and my MLS from the University of North Carolina at Chapel Hill. As an MS student, my work focused on the archiving and recordkeeping strategies of documentary filmmakers. Independent media creators often lack the time and infrastructure to preserve their digital files; the same holds true for community arts organizations and other informal associations. Digital preservation in these settings is challenging in that organizations do not have the same access to institutional digital archives expertise and support. I am interested in exploring baseline standards for digital archives that might enable these types of media creators to more effectively manage their digital collections.

My professional experience includes work with information technology firms, non-profit organizations, and most recently with the DigCCurr program at UNC-SILS. I have worked on independent documentary projects through the Salt Institute and the Center for Documentary Studies at Duke University.

Jeannette Bastian

Jeannette A. Bastian is Professor and Associate Dean for Academic Affairs at the Graduate School of Library and Information Science, Simmons College, Boston where she also directs their archives education program. She was Territorial Librarian of the United States Virgin Islands 1987 to 1998 and received her Ph.D. from the University of Pittsburgh in 1999. Her archival publications include Owning Memory, How a Caribbean Community Lost Its Archives and Found Its History (2003), Archival Internships 2008), and Community Archives, The Shaping of Memory (2009). Her research interests include the development of archival education, collective memory and postcolonialism.

Belinda Battley

I am studying towards a PhD as an external, part-time student at Monash University, and am also an archivist in the Auckland office of Archives New Zealand, where I have worked since 1990, and am involved in a full range of archival work, from A&D and reference to exhibitions and giving talks. I completed a Masters in information studies, majoring in Archives and Records Management, in 2011, at Victoria University in Wellington, NZ. My Masters project surveyed and analysed factors behind the use of the Australian series system in archival description throughout New Zealand, using a mixed-methods approach, with the Records Continuum model as a tool for analysis. This resulted in two peer-reviewed journal papers, in Archifacts and in Archives and Manuscripts.

My particular interest, and the area of my PhD research, is the fit between Australasian archival description and collective memory construction in communities. I am using a mixed interpretive, critical, auto- ethnographic approach, and I have a particular interest in Records Continuum theory. In my PhD research, I intend to work collaboratively with a community to which I belong to construct a model of their use of records / archives for collective-memory creation and maintenance. To build the model I intend to use a second-generation GT approach. I will then compare this model with a model of the Australian series system developed in consultation with domain experts, and compare both with real-world implementations in Archives.

Snowden Becker

My dissertation in progress explores the archival nature of evidence management in law enforcement, and the people, practices, and processes involved in these agencies' creation and long-term retention of evidence in a wide variety of audiovisual formats. My research interests more broadly are concerned with how audiovisual materials, especially amateur recordings, are integrated into our cultural heritage. I strongly believe that a 21st century archival education should prepare new members of the field to manage a historical record in which mechanical, electronic, digital and audiovisual components have become ubiquitous. As Program Manager for UCLA's Moving Image Archive Studies MA degree, I now engage daily with the challenges of keeping a highly specialized curriculum rigorous, relevant, and rewarding for its students--as well as the need to demonstrate the value of archival studies to a broad range of stakeholders both on and off our campus.

Edward Benoit III

I am currently a PhD candidate in the School of Information Studies of the University of Wisconsin-Milwaukee. Prior to entering the doctoral program, my research covered a wide array of topics including Milwaukee socialism, a case study of photography as primary sources, and representations of progress seen at the 1893 and 1933 World's Fairs. The doctoral program, however, focused my research agenda. At the broadest level, I explore methods of increasing access and use of information with an emphasis on its discoverability. Within this area, I focus on digital collections with prior research on the impact of the DMCA, social tagging, document evaluation, the history of digital collections, participatory and community archives. My dissertation explores the possible integration of minimal processing and domain expert generated social tagging within digital archives.

As an educator, I strive to integrate emerging technologies within the classroom, and providing opportunities for both online and onsite student engagement with practical applications of learned theory. Professional education requires the mastery of both theoretical and applied techniques; therefore, my teaching philosophy is built upon a constructivist and apprenticeship learning styles. Although no course can completely avoid instructive teaching, the best method provides a theoretical foundation while allowing students to expand their understanding through real world applications. Students gain both experience and the problem solving tools for future issues.

Joel Blanco-Rivera

I'm an Assistant Professor at Simmons College Graduate School of Library and Information Science. I received my PhD from the University of Pittsburgh in April 2012. My research interests are archives and transitional justice in Latin America, freedom of information, and social memory. My dissertation is a case study of the work of the National Security Archive in transitional justice mechanisms in Latin America. My current research focuses on the archival implications of the emergence of Freedom of Information laws in Latin America. My current research focuses on the archival implications of memory-making and identity of the Puerto Rican diaspora in the United States.

Lorraine Richards Bornn

I am an Assistant Professor at the College of Computing and Informatics (CCI) at Drexel University, performing research in the areas of digital curation and preservation. I am currently co-PI with Dr. William C. Regli of CCI on a Federal Aviation Administration-funded contract research project, "A Research Study of Curation and Stewardship of Technical Data," which is helping the FAA to develop requirements and a prototype OAIS-compliant "big data" repository to manage its scientific research data. I am also an instructor in the Digital Curation Professional Institute: Curation Practices for the Digital Object Lifecycle, hosted at the University of North Carolina at Chapel Hill.

My dissertation Evidence-as-a-Service: State Recordkeeping in the Cloud, defended in October 2013, investigated information stewards working in public sector organizations that had recently implemented cloud computing. It investigated the extent to which the self-reported roles and responsibilities of archives and records management professionals coincide or differ from those reported by archives and records management journals over the past 42 years, finding empirical support for the Continuum Theorists' hypotheses about the distributed nature of recordkeeping roles and responsibilities. It also examined how cross-occupational relationships among recordkeeping stewards affect records managers' ability to perform recordkeeping responsibilities successfully in cloud computing environments. It found that shifting power dynamics created incentives to engage in fewer records management tasks than otherwise would have occurred. Finally, it examined how the stewards reported their concerns about cloud computing risks, finding that the power imbalance was reported more clearly and frequently than the risks.

Sarah Buchanan

Sarah is a doctoral student in Information Studies at the University of Texas at Austin. Her main research interest in archival studies comprises archival work processes including arrangement and description of special collections, with a focus on archaeological archives and digital classics. She also studies community archives, museums, and archival history. Currently she is a member of the Augmented Processing Table research team investigating arrangements of paper and digital materials. In teaching, she strives to promote a participatory environment that integrates students' community engagement. Additionally she is active in the Society of American Archivists and helped launch the Bruin Archives Project (BAP) in 2008 as co-president of the SAA Student Chapter at UCLA. She received an M.L.I.S. from the University of California, Los Angeles and a B.A. with Distinction in Classical Studies from the University of Pennsylvania.

Matt Burton

I am a doctoral candidate at the School of Information at the University of Michigan. I have an interdisciplinary degree in Bioinformatics from Wesleyan University. After Wesleyan I worked as an information security researcher for the MITRE corporation where I developed open XML standards for the information security community. My past research includes studies of scientific collaboration and the production of long-term data in ecological science. Currently, I study the digital humanities and new modalities of scholarly communication. Specifically, I am examining the infrastructural dynamics of scholarly blogs using quantitative (text mining and qualitative (grounded theory) techniques to construct and analyze an archive of digital humanist blogs.

Jessica Bushey

Jessica is a doctoral candidate in the School of Library, Archives and Information Studies at the University of British Columbia. Her research interests include digital image curation and the trustworthiness of digital images stored and accessed in the cloud. Jessica is a graduate research assistant with: InterPARES Trust (http://interparestrust.org/), Records in the Cloud Project (http://recordsinthecloud.org/), and the Law of Evidence in the Digital Environment Project (http://www.lawofevidence.org/). Prior to commencing her doctoral studies, Jessica held the position of Digitization Lead at the Museum of Anthropology at UBC, in which her team digitally photographed 35,000 ethnographic objects for online discovery and scholarly research. As an Adjunct Professor, Jessica has courses at SLAIS that address non-textual archival materials, open-source software for archival arrangement and description, online archives, and the photographic record.

Ellen-Ray Cachola

Trained in Political Science, Cultural Anthropology and Information Studies, Ellen-Rae Cachola brings an interdisciplinary lens into the Archival field. Her research examines how state-based and community-based archives document different views of security in the Asia-Pacific region. She focuses on the use of oral, kinetic, digital and analogue archival systems in contemporary women's movements that facilitate cross-cultural communication and develop projects that advocate for non-militarized pathways to peace and security.

Hang Cao

Hang Cao is a associate professor of department of Library, Information and Archives at Shanghai University, China. Research interest is archives information resources management and informatization of archives management and Archives, records and society. Course taught include Information Economics, Introduction to Archival Science, Modern Foreign Archives Management, Compilation Of Archival Documents etc.

Kathy Carbone

I am a second year doctoral student in the Department of Information Studies at the University of California, Los Angeles (UCLA) and the Performing Arts Librarian and Institute Archivist in the Division of Library and Information Resources at the California Institute of the Arts, (CalArts). I am also a faculty member in the School of Music at CalArts. I hold a BFA in Dance, a MA in Dance and Music, and a MLIS. As a modern dancer and choreographer, I spent over 20 years collaborating with musicians and dancers through improvisation and set material in theater and gallery based live performance events.

My research focuses on artists and archives. More specifically, I investigate the following phenomena: the ways in which visual and performing artists conceptualize, interact with, use, and respond to the archive and archival records; why and how artists use archival records in or as works of art; how archival records as works of art circulate in art and media systems outside of the archive; artist-in-residency programs in archives; and, archivist and artist collaborations.

Janet Ceja

I am an Assistant Professor at the School of Information Resources and Library Science (SIRLS) at the University of Arizona. I received my PhD from the University of Pittsburgh where I was a part of the first cohort of the American Library Association's Spectrum Doctoral Fellowship program. Previously, I worked as a moving image archivist in Los Angeles, California.

My approach to archival research and pedagogy is based on interdisciplinary thinking and method. My major fields of interest include the history of film and media, Latin American popular culture, and intangible cultural heritage in Mexico and Latino communities in the U.S. I teach courses on archives that focus on advocacy, moving image preservation, and documentation practices in underrepresented communities. Aligned with the goals of the SIRLS Knowledge River program, my teaching and research is committed to representing and serving the information needs of Latino and Native American populations

Marika Cifor

Marika Cifor is a first-year doctoral student in Information Studies at the University of California, Los Angeles where she is also pursuing a Concentration Certificate in Gender Studies. Her research interests include community archives, particularly in their meeting points with institutional archives, sexuality, affects, queer and feminist theories, and collective memory. She is currently working on a collaborative project between the June L. Mazer Lesbian Archives, the Center for the Study of Women and the UCLA Libraries. She holds a MS in Library and Information Science with a Concentration in Archives Management and an MA in History from Simmons College and a BA in History and Political, Legal, and Economic Analysis from Mills College.

Anthony Cocciolo

Anthony Cocciolo is an Assistant Professor at Pratt Institute School of Information and Library Science, where he teaches digital archives, moving image and sound archives, and digital libraries. His research interests are in the uses of emerging information and communications technology to promote human development, particularly building means to promote knowledge construction, civic/democratic engagement and social memory. His work considers how archives and libraries, as well as the interplay between digital and physical spaces, can act as environments or ecologies for promoting these goals.

Anthony completed his doctorate from the Communication, Computing Technology in Education program at Columbia University, and BS in Computer Science from the University of California, Riverside. Prior to Pratt, he was the Head of Technology for the Gottesman Libraries at Teachers College, Columbia University, where he worked extensively on digital projects for the College's archive and libraries.

Christopher Colwell

I am a Fellow and Life Member of Records and Information Management Professionals Australasia (RIM Professionals Australasia) and an Associate of the Governance Institute of Australia and the Institute of Chartered Secretaries and Administrators (a Chartered Secretary). With 25 years experience in the information disciplines, for the last 17 years I have been responsible for implementing records and information management programs in Australian public sector agencies. Currently the Information and Governance Manager at the Australian Prudential Regulation Authority, I am also a Casual Lecturer and PhD candidate in the Information and Knowledge Management School at the University of Technology, Sydney.

As the inaugural recipient of the RIM Professionals Australasia Research Grant I conducted research into the professional values of the recordkeeping industry in Australasia. This research guided a revision of the RIM Professionals Australasia Code of Professional Conduct and Statement of Ethical Practice.

The aims of my PhD research are to:

- explore the nature of the record and the perceptions of its properties in an organizational context;
- examine other disciplinary perceptions of the record object as information and evidence; and

examine the implications of these perceptions for organizations and their performance, as well
as for the records management profession with reference to models best practice and other
disciplines

Patricia Condon

Patricia Condon is a doctoral candidate in the Graduate School of Library and Information Science at Simmons College in Boston, MA. She received her Master of Library and Information Science and Master of Arts in Anthropology from The University of Southern Mississippi in Hattiesburg, MS. Patti's teaching and research specializations are archival studies and digital curation. Patti has fifteen years experience researching, teaching, and working in the information disciplines including professional positions in archives, academic libraries, and publication. Her current research focuses on two areas: the curation and stewardship of digital materials in archives and libraries; and the significance of place and sense of place in archives, community collections, and cultural heritage. Patti's dissertation research focuses on digital curation, with an emphasis on education. Her dissertation explores the character, development, and educational landscape of digital curation knowledge, practices, and skills, and investigates whether digital curation is emerging as an independent discipline. As an archival educator, Patti encourages her students to develop and improve their research and practical skills; attain a more thorough understanding of, and respect for, the theory and history of their field; gain a holistic view of the information disciplines; and creatively explore new ideas. As a lifelong learner, Patti strives to do the same.

Danielle Cooper

Danielle Cooper is a doctoral student at the Graduate Program in Gender, Feminist and Women's Studies at York University and a founding editor of Feral Feminisms, an independent, inter-media, peer reviewed, open access online journal. She also holds a Masters of Information degree (M.I.) from the Faculty of Information at the University of Toronto in collaboration with the Mark S. Bonham Centre for Sexual Diversity Studies. Her doctoral research utilizes ethnographic methods to examine LGBT libraries and archives and the queer information-based activities found therein. She is also interested in the activities of activist and autonomous grassroots information organizations more broadly. Her work is featured in Feminist and Queer Information Studies Reader and forthcoming in GLQ: A Journal of Gay and Lesbian Studies and Interactions: UCLA Journal of Education and Information Studies.

Sheila Corrall

I became Professor and Chair of the LIS Program at Pittsburgh in 2012, after eight years as Professor of Librarianship & Information Management at the University of Sheffield, where I was Head of the iSchool 2006-2010. I was previously director of library/information services at three UK universities, and a senior manager at The British Library.

I teach Research Methods and Academic Libraries, and am committed to an inquiry-based pedagogy, which models the process of research in the student learning experience. I aim to develop new professionals as reflective practitioners who have a broad and deep understanding of the context of their work, and can engage critically with current thinking and practice in their field. I never set essays

or "term papers", preferring more meaningful assignments, which require students to relate theory from the literature to real-world practice.

My research areas include the application of business concepts and tools to library and information services; roles, competencies, and education of information professionals; and collection development and information resource management in the digital world. Recent work includes a review of evolving academic library specialties, an international survey of library engagement with bibliometrics and research data, and book chapter on future design of library space from a researcher perspective. I serve on the editorial boards of five journals, and advisory boards of Credo Reference and Facet Publishing. In 2002, I was the first President of the Chartered Institute of Library and Information Professionals, and in 2003 received the International Information Industries Lifetime Achievement Award.

Richard Cox

Richard J. Cox is Professor in Library and Information Science at the University of Pittsburgh, School of Information Sciences where he is responsible for the archives concentration in the Master's in Library Science degree and the Ph.D. degree. Dr. Cox served as Editor of the American Archivist from 1991 through 1995 and Editor of the Records & Information Management Report from 2001 through 2007. He has written extensively on archival and records management topics and has published eighteen books including: American Archival Analysis: The Recent Development of the Archival Profession in the United States (1990) -- winner of the Waldo Gifford Leland Award given by the Society of American Archivists; Managing Institutional Archives: Foundational Principles and Practices (1992); The First Generation of Electronic Records Archivists in the United States: A Study in Professionalization (1994); Documenting Localities (1996); Closing an Era: Historical Perspectives on Modern Archives and Records Management (2000); Managing Records as Evidence and Information (2001), winner of the Waldo Gifford Leland Award in 2002; co-editor, Archives & the Public Good: Records and Accountability in Modern Society (2002); Vandals in the Stacks? A Response to Nicholson Baker's Assault on Libraries (2002); Flowers After the Funeral: Reflections on the Post-9/11 Digital Age (2003); No Innocent Deposits: Forming Archives by Rethinking Appraisal (2004), winner of the Waldo Gifford Leland Award in 2005; Lester J. Cappon and Historical Scholarship in the Golden Age of Archival Theory (2004); Archives and Archivists in the Information Age (2005); Understanding Archives & Manuscripts (2006) with James M. O'Toole; Ethics, Accountability, and Recordkeeping in a Dangerous World (2006); Personal Archives and a New Archival Calling: Readings, Reflections and Ruminations (2008); The Demise of the Library School: Personal Reflections on Professional Education in the Modern Corporate University (2010); and Archival Anxiety and the Vocational Calling (2011). Recent essays include "Lester J. Cappon and the Creation of Records: The Diary and the Diarist," Archivaria 75(2013): 115-144; "Lester J. Cappon, Scholarly Publishing, and the Atlas of Early American History, 1957-1976," Journal of Scholarly Publishing 43 (2012: 294-321; "War, Memory and Archives: Building a Framework," Library and Archival Security 25 (2012): 21-57; and "Lester J. Cappon, an Unwritten Textbook, and Early Archival Education in the United States." Information and Culture: A Journal of History, forthcoming. Dr. Cox was elected a Fellow of the Society of American Archivists in 1989. academic

Roderic Crooks

My writing currently focuses on Internet participation, mobile computing, data activism, and community archives. In general, I am interested in how narratives around novelty, inevitability, and universality mask the ways that technological systems encode idealized forms of social relations and require performances based on these orderings. I'm trying to work out some ethical issues in the context of mobile computing and cultural heritage, incorporating the multiple perspectives of users, service providers, and society. Before entering the doctoral program, I completed an MLIS at UCLA (2011) and an MFA at the Writers' Workshop at the University of Iowa (2005).

Morgan Currie

Morgan Currie is a PhD candidate in the Department of Information Studies at UCLA. Her research focuses on the use of statistical data practices in governance and how concepts of openness and transparency drive government policy. She is currently investigating how the City of Los Angeles is implementing its open government data website portal. Currie also works on staff at UCLA's Kleinrock Center for Internet Studies (KCIS), as a researcher and program coordinator; there she writes on the history of early electronic network gateways and California's network cultures. Currie will have an MLIS from UCLA in 2014 and has a Masters in New Media from the University of Amsterdam.

Elizabeth Daniels

I am a first year PhD student at Monash University, I also work as a Project Archivist at The University of Melbourne's e-Scholarship Research Centre.

Morgan Daniels

I am a doctoral candidate at the University of Michigan's School of Information. My research focuses on people's experiences of information reuse, a theme that I have explored in several contexts. Within traditional archives, I have looked at the impact of college and university archives on student users and worked on the development of tools for user-based assessment of archives (both with the Archival Metrics project). More recently my focus has shifted to look specifically at the reuse of research data. My work in this area includes an interview and observation-based study of scientists' data management and reuse practices and an analysis of staff approaches to change in data over time at three repositories.

Combining my experience investigating data reuse and a background gained through the completion of a museum studies certificate, I am currently finishing up my dissertation on the topic of research use of museum materials, including artifacts, their representations, and research data collections held by museums. Using a comparative case study approach, I address the various kinds of data held by two museums and the ways in which researchers in several fields use those data to develop new knowledge. It also explores the implications of museum data sources for developing data sharing infrastructure. At AERI, I will present material based on my dissertation work. I look forward to receiving feedback on this work from the AERI community.

Devan Donaldson

Devan Ray Donaldson is currently a Doctoral Candidate at the University of Michigan School of Information. In the broad research areas of data curation and digital preservation, he investigates preservation management, preservation metadata, digital repositories, users and issues of trust and trustworthiness in a digital preservation context. He holds a M.S. in Library Science from the University of North Carolina at Chapel Hill and a B.A. in History from the College of William and Mary in Virginia. In 2005, he studied abroad at Oxford University, Hertford College. He has been a Bill and Melinda Gates Millennium Scholar since 2002, a Horace H. Rackham Merit Fellow since 2008 and an Edward Alexander Bouchet Graduate Honor Society Member since 2012.

Lorrie Dong

I am a doctoral candidate at the University of Texas at Austin's School of Information (UT). My dissertation research focuses on the social ecologies of mental health records over time. I am studying how medical records from a state institution in the American South were involved in social relationships within the hospital and across broader communities (e.g., professional, local) from the late 19th century, as active records, to the present, as archival materials. The intent is to better understand how these records were and continue to be part of dynamic power structures and, consequently, to consider the place of medical records within several cultural heritage and archival paradigms.

I hold a B.A. in English from the University of California, Berkeley; an M.Phil. in Renaissance literature from the University of Cambridge; and a MSIS with a specialization in preservation administration from UT. I am currently the conservation technician at the Architecture & Planning Library. Past institutions that I have worked for include the University of Illinois at Urbana-Champaign and the Smithsonian Institution Libraries.

Jonathan Dorey

Jonathan Dorey is a Ph.D. candidate at the McGill University School of Information Studies in Montréal, Canada. His doctoral research focuses on the needs and expectations of history undergraduates with regards to access to digital archives. His primary fields of study are language and information, information behaviour, information and archival literacy, archival use and reuse. Jonathan has been an active participant at AERI since 2011 and was part of the Scoping the Published Archival Research Corpus (SPARC) and Charting the Archival Enterprise in Doctoral Education through AERI research projects. He has taught master level classes at the McGill University School of Information Studies and Université de Montréal's École de bibliothéconomie et des sciences de l'information.

Jonathan holds an MLIS from McGill University (2010), a graduate certificate in website and software localization from Université de Montréal (2008) and a bachelor's degree in translation and East-Asian studies from Université de Montréal (2002). He is a certified translator since 2005. Jonathan has worked at BG Communications and Harris Interactive in Montréal as well as numerous clients as a translator, at Google Montréal as a local bilingual taxonomy specialist and at CEDROM-SNi as a librarian.

Wendy Duff

I obtained my Ph.D. (1996) from the University of Pittsburgh. I am the Director of the Digital Curation Institute, and teach archives and records management with a focus on access to archival materials.

I am a founding member of AX-SNet, an evolving international team of researchers interested in facilitating access to primary materials. I have also served as a member of the ICA Adhoc Commission on Descriptive Standards, the Encoded Archival Description Working Group, and The Canadian Council of Archives Standards Committee.

Joanne Evans

I am a Lecturer in the Faculty of IT at Monash University involved in teaching the archives and records units of our Bachelor, Grad Diploma and Masters courses, as well as other units in the information systems and information management areas. My research relates to the design and development of archival information systems, with particular emphasis on recordkeeping metadata, interoperability and sustainability. I am particularly interested in exploring the requirements for archival systems in community environments using inclusive systems and research design approaches. With digital and networking information technologies throwing down many challenges for archival and recordkeeping endeavours, in both my teaching and my research I like to explore how they may help us develop better archival and recordkeeping infrastructures, in turn enriching our understanding of records, archives and archivists in society.

Rebecca Frank

Rebecca D. Frank is a doctoral student at the University of Michigan School of Information. Her research interests include the sustainability of digital information, risk management and disaster planning, digital preservation, and trustworthy digital repositories. Rebecca also holds a Master's degree in Information Science with a focus on Preservation of Information from the University of Michigan School of Information.

Frank F. Furstenberg

Frank F. Furstenberg, is a Professor of Sociology and Research Associate in the Population Studies Center at the University of Pennsylvania. His interest in the American family began at Columbia University where he received his Ph. D. in 1967. His recent books are *Behind the Academic Curtain:* How to Find Success and Happiness with a PhD (2013) and Destinies of the Disadvantaged: The Politics of Teen Childbearing (2007). His current research projects focus on the family in the context of disadvantaged urban neighborhoods, adolescent sexual behavior, cross national research on children's well-being, urban education and the transition from adolescence to adulthood.

Patricia Galloway

Patricia Galloway joined the University of Texas at Austin School of Information's archival studies specialization, where she is now Professor, in 2000. She teaches courses in digital archives, archival appraisal, and historical museums. From 1979 to 2000 she worked at the Mississippi Department of Archives and History, where she was an editor, historian, museum exhibit developer, and manager of archival information systems, and from 1997 to 2000 directed an NHPRC-funded project to create an electronic records program for Mississippi. Her academic qualifications include a BA in French from Millsaps College (1966); MA (1968) and PhD (1973) in Comparative Literature and PhD in Anthropology (2004), all from University of North Carolina at Chapel Hill.

Patricia Garcia

I am a doctoral candidate in the Department of Information Studies at the University of California, Los Angeles. I received a B.A. in English literature from St. Edward's University in 2005, an M.A. in English literature from the University of Texas, Austin in 2007, and an M.L.I.S. from the University of California, Los Angeles in 2013.

I am currently completing a dissertation titled "Beyond the Textbook: Primary Sources and Inquiry-based Learning in Science Education." My research analyzes the relationship between inquiry-based educational practices and the critical thinking skills that are fostered through the instructional use of primary sources.

Anne Gilliland

I am a professor specializing in archival studies in the Department of Information Studies at UCLA. I have worked extensively teaching, supervising, co-supervising and mentoring Master's and Ph.D. students from UCLA and several other universities and countries. I am also the Director of the Center for Information as Evidence (CIE) at UCLA. My recent work addresses conceptualizations of the record, the archive, and evidence in an increasingly digital, post-colonial and globalized world. Given this context, I am particularly interested in the following aspects:

- 1. Archival informatics, e.g., metadata and metadata archaeology, design and evaluation of cultural information systems, and digital recordkeeping;
- 2. Professional and research infrastructure-building for Archival Studies, e.g., archival research methods, archival intellectual history, community-based research, professional and research education and pedagogy, internationalization of archival work, pluralization of the field and its theory and practice base, and archival education; and,
- 3. Social justice and human rights issues as they relate to archives and records and especially Indigenous, racial and ethnic, LGBT and other under-represented or underempowered communities of record.
- 4. The agency and affect of archives and recordkeeping on the daily lives of individuals and communities seeking to recover and establish transparency after ethnic and religious conflicts.

I am committed to supporting the development of archival education programs around the world that produce rigorous, reflexive, critical, culturally-sensitive, technologically competent, and globally-aware archival practitioners, researchers and educators.

Elaine Goh

I am a PhD candidate at the School of Library, Archival and Information Studies at the University of British Columbia (UBC), Canada. My doctoral dissertation research aims to identify areas where the archival legislation in Commonwealth countries addresses the management of public records and gaps between the legislation and recordkeeping activities. My other research interests include the management and preservation of records in the cloud as well as organizational culture and behaviour. I am also a graduate research assistant for the Records in the Cloud and the International Research on Permanent Authentic Records in Electronic Systems (InterPARES) Trust Projects. Prior to starting to my PhD, I worked at the National Archives of Singapore. I hold a Masters of Archival Studies from UBC and a B.Soc. Sci from the National University of Singapore.

Karen Gracy

Karen F. Gracy joined the faculty of the School of Library and Information Science of Kent State University as assistant professor in 2007. She possesses an MLIS and PhD in Library and Information Science from the University of California, Los Angeles and an MA in critical studies of Film and Television from UCLA. Recent publications have appeared in JASIST, Archival Science, American Archivist, Journal of Library Metadata, and Information and Culture.

Dr. Gracy's scholarly interests are found within the domain of cultural heritage stewardship, which encompasses a broad range of activities such as preservation and conservation processes and practices, digital curation activities that consider the roles of heritage professionals and users in the lifecycle of objects and records, as well as knowledge representation activities such as definitions of knowledge domains, development of standards for description, and application of new technologies to improve access to cultural heritage objects.

Dr. Gracy teaches in the areas of preservation and archiving, with a focus on moving image archives and digital preservation issues. As an instructor, one of her greatest challenges is to take students' natural attraction to the physical material in collections and transform it into an enthusiasm for and a mastery of the complex set of functions and tasks which comprise the world of cultural heritage stewardship. To learn to think like an archivist or a preservationist, a student must gain both theoretical and practical knowledge and use those two types of knowledge in tandem to make decisions in real-world environments.

Ann Graf

I have a BA in mass communication with emphasis on broadcast media and an MLIS with a focus on the organization of information. I am a fourth semester PhD student with interests in historical and bibliographic research methods and digital image archives. I am currently beginning to narrow my dissertation topic, which will involve the community archiving and information organization practices of those who photograph ephemeral art (graffiti, street art, temporary art) and who describe and post their collections on the Internet. My research objectives involve analyzing the motivations, methods, and purposes behind these digital collections to inform preservation of the cultural record left behind within what is often considered a contested or overlooked art form.

I have taught information literacy for three semesters at a local career college. My teaching has positively influenced my view of what might be called "naïve" information classification and collecting practices by those not trained in information studies. Just as in taking a photo, both research and teaching involve carefully framing a subject within time and space and giving special attention to information context or lack thereof. My personal involvement in photography for the past 30 years presents a natural lens through which to view both my teaching and research aspirations (pun intended).

Jane Gruning

In am a third year doctoral student at the University of Texas at Austin School of Information. My research interests are in the area of digital archives and the preservation of digital objects. I am interested in how human experiences of digital objects as virtual and/or physical affect how we try (or don't try) to keep those objects for the long term. I approach these topics from the perspective of discourse, that is, how our talk about digital objects reflects our conceptions of those objects. An additional and related interest of mine is the study of digital virtual consumption. This is the phenomenon of the purchase of virtual objects, often within online games.

Currently I am the Graduate Research Assistant for an NSF-funded study (PI, Dr. Lecia Barker) concerning faculty adoption of new teaching practices in STEM disciplines (primarily Computer Science). I hope that I will be able to apply the knowledge of teaching approaches that I gain during this project to the work of training archival students in technical skills that are becoming increasingly essential for digital archivists.

Robb Hernández

Joining the English Department at the University of California, Riverside in 2012, I teach courses in Latina/o cultural studies and serve on the faculty advisory boards for LGBIT studies and Designated Emphasis in Book, Archive, and Manuscript Studies. My research is grounded in the spirit of recovery and the "archival impulse" in Latino cultural practices where Mexican American altar-building, nicho assembly, yard shrines, and rasquachismo aesthetics preserve memory making-do "within the world of the tattered, shattered and broken." My current book project entitled, "Archival Body/Archival Space: Queer Remains of the Chicano Avant-Garde," confronts the lost bodies of record for queer avant-gardists once critical to the Chicano art movement yet little known due to cultural neglect, non-extant visual evidence, and AIDS crisis. Written in the vein of "art memorial" criticism, I propose a queer

archive fieldwork methodology that challenges archive empiricism and espouse a set of analytics to explain how queerness remains in alternative archive formations and creative recordkeeping practices rupturing the compulsory heteronormative vision of this art movement. My monographs, The Fire of Life: The Robert Legorreta— Cyclona Collection, 1962-2002, and VIVA Records: Lesbian and Gay Latino Artists of Los Angeles, 1970- 2000 were published in the "Chicano Archive" book series edited by Chon A. Noriega and Lizette Guerra and distributed by the University of Washington Press. I received my Ph.D. from the University of Maryland, College Park (2011) where I co-founded the first Latina/o Studies program in the Mid-Atlantic and coordinated the Latino Museum Studies Program for the Smithsonian Institution.

Luciana Heymann

My whole career has been developed at the Center of Research and Documentation of Brazilian Contemporary History (CPDOC), at the Getulio Vargas Foundation. Hired as a researcher in 1986, I worked organizing personal archives of members of the Brazilian political elite. When I began my Social Anthropology master's degree in the early 1990s, I decided to develop my fieldwork on one of these archives. In my doctoral thesis in Sociology, I have focused the issue of the social construction of historic "legacies", analyzing the role of personal archives in the projects of construction of exemplary individual trajectories.

I am now a member of the staff of the Graduate Program in History, Politics and Cultural Assets of CPDOC, created in 2003. In recent years, I have been in charge of the Memory and collections discipline, in which I try to call the students attention to a socio-historical approach of archives, to their related representations and the archivists' role in the production of discourses about the past.

More recently, I have been interested in the memory of the Brazilian military regime (1964-1985). The creation of the Political Struggles in Brazil Reference Center, in 2009, and of a Commission of Truth and Reconciliation, in 2012, are signs that the memory of this period is finally becoming State policy. What are the outlines of this process and its effects on archival practices and representations are some of the questions that I am interested in

Xiaoyu Huang

Dr. Xiaoyu Huang is an associate professor of IRM School at Renmin University of China. She got the doctor degree in 2002, majored in Archives Theory and Modernization of Archives Management. She has taught 6 courses for undergraduates and graduates. Her research interests include archival education, archival theory, archives management in foreign countries, social service in archival profession, personnel archives. By now, she has published 6 monographs, 7 teaching books, and more than 130 academic articles. She has taken in charge of 4 research projects, and participated in 6 research projects from national to bureau level. She has got many professional teaching and research prizes, and most important prizes include National New Century Excellent Talents and National First-class Doctoral Dissertation. She had been offered several training and visiting programs in United States and Canada. She had been the visiting professor of SLAIS at UBC. She had been one of the Editorial Members of Comma. She had been one of the interpreters, translators, speakers and attendees of 13th, 16th and 17th ICA Congress. She had been one of the speakers of 1st and 3rd Asia and Pacific Conference on Archival Education. Almost all her speeches at International conferences

were related to archival education. Her goal to attend AERI 2014 is to build more communications among archival education and research community.

Dalena Hunter

Dalena Hunter is a fourth year PhD student in the Information Studies Program at UCLA. Her focus in on archives, specifically the relationship between record producing bodies, cultural narratives, and institutions of power.

Lauren Kilgour

In the Fall of 2014, I will enter the PhD program in Library and Information Sciences at the University of Pittsburgh's School of Information Sciences. Currently, I am completing my Master of Information degree at the University of Toronto's Faculty of Information in the Archives and Records Management concentration. In this program of study, much of my research explores the theoretical, social and cultural dimensions of records and record keeping practices in public and institutional contexts. Within this wider area of focus, my primary research project draws upon my background working in the volunteer and nonprofit sectors to critically examine the information needs and experiences of offenders. As part of this larger research agenda, my work engages with a number of fields: archives and records management, impact studies, social justice, public policy, education, science and technology studies, social and cultural theory, and public and applied scholarship. Previously, I completed an Honours Bachelor of Arts degree also at the University of Toronto, with a Specialist in English and Minors in History and American Studies.

David Kim

David Kim is a doctoral candidate in the department of Information Studies at UCLA. His research focuses on the cultural politics of representation in digital archives. He has developed several digital projects that explore emerging methods and multimodal scholarship in the digital humanities, including 3D/simulation archive of LA Chicana/o murals, digital archive of Asian American contemporary art, and network analysis of Native American ethnographic photographs in the early twentieth-century.

James King

James King is a second-year doctoral student at the University of Pittsburgh's School of Information Sciences. He holds a BA from Samford University, an MA in English from Boston College, and an MLIS from the University of Alabama. Prior to beginning the doctoral program, he worked as an Admissions Coordinator at North Bennet Street School and completed archives courses at Simmons College. His current research interests lie in the intersection of archives and questions of cultural memory and conflict, particularly those addressing how archives function within communities fractured by war and other historical traumas. My research and teaching are both informed by an interdisciplinary approach that draws from my background in the humanities.

Ann-Sofie Klareld

I commenced as a Ph.D. Candidate in February 2013 within the project Good Information Governance (GOINFO) at the Department of Archives and Computer Science, Mid Sweden University. I have a bachelor's degree in Archives and Information Science and a Master of Arts in Ethnology. Prior to entering the doctoral program, I worked as an archivist and a registrar for five years, foremost in the governmental and municipal sector in Sweden.

My scholarship philosophy is still developing since I am a new researcher. My dissertation in progress explores the change of power and mandates over archives as a consequence of the current egovernment development. I anticipate that attending AERI and interacting with other archival scholars will lead me to further formulate a scholarship philosophy, and develop my skills as a researcher.

Since I began my academic career as a Ph D Candidate, I have completed courses in Computer and Applied Systems Science, Information Management, Scientific Writing and Presentation, Theory of Social and Cultural Sciences and Innovative Applications of Research and Science. Milestones accomplished include writing a research proposal, doing a preliminary data collection at public authorities, participating in GOINFO workshop series planning and the project InterPARES Trust in Digital Records in an Increasingly Networked World.

To attend AERI will be a great opportunity for me to meet and learn from experienced scholars from around the world, discuss and receive comments on my research and writing, something that will significantly help me to publish my first paper in a peer reviewed journal.

Adam Kriesberg

I am a doctoral candidate at the University of Michigan School of Information. My research interests focus on access to digital archival and cultural materials. I am currently working on my dissertation, which examines public-private partnerships between US state archival institutions and the private sector (companies such as Ancestry.com and ProQuest). My research explores how these partnerships emerge, how they are managed during their active periods, and how they affect citizen access to archival materials using a mixed-methods approach. During my time at Michigan, I have worked as a Graduate Student Research Assistant on the Archival Metrics and Dissemination Information Packages for Information Reuse (DIPIR) projects.

My commitment to archival scholarship comes from a belief that our field must continue advocating for public access to digitized archival materials. The affordances of technology should not obscure the need for continued critical inquiry into the role of digital records in the public information landscape. As a scholar, I aspire to be a strong supporter of public access to information of all types, and to emphasize this idea in my research and teaching. Preservation of the cultural record and the provision of access for citizens are continued drivers of my work, and a source of inspiration as I explore access systems and the impact of partnerships with public archival institutions.

Aline Lacerda

I'm a historian who always worked with historical archives. In the last years, I've been working at the Department of Archive and Documentation of Casa de Oswaldo Cruz, a center of research and documentation of public health belonged to Oswaldo Cruz Foundation, in Rio de Janeiro, Brazil. I deal with personal and institutional historical archives related to the Brazilian history of medicine and public health. Recently I coordinate a MBA on preservation and management of Science and Health Cultural Heritage at Casa de Oswaldo Cruz.

In my career, I was responsible for various projects of historical archival management. Besides being responsible for organizing many archival funds, I also took part of the creation of centers of documentation such as Pediatric Memorial, in Rio de Janeiro. My professional experience includes curatorship of exhibitions events, publishing editions and pedagogic activities. I was teacher of the Information Science Department at Fluminense Federal University in the Archival Faculty, where I was responsible for disciplines such as archival fundaments, history of archives and archival institution management.

I have published the photobiography Carlos Chagas, a scientist of Brazil, and Photographs in archives: the production and meaning of visual records (http://www.scielo.br/pdf/hcsm/v19n1/en_15.pdf), among other articles.

Alison Langmead

I have made a concerted effort in my professional career to combine my enthusiasm for academic work with an equally strong desire to use this theoretical research in daily practice. While working towards by PhD in art history and my MLIS, for example, I held a variety of positions in a number of library-museum- archives settings, including a full- time post as the archivist/records and information manager in a small business. I currently hold a joint faculty appointment at the University of Pittsburgh that again combines the practical and the theoretical.

In my teaching, I believe that a successful graduate education in the field of archives and records/information management must satisfy two basic requirements. First, as befits any professional education, our students must become acquainted with a set of basic practical skills. Second, our students need to acquire a sophisticated understanding of the theoretical and historical underpinnings that support these practical proficiencies. Without a solid awareness of the reasons why current practice is the way that it is, our students will be hard-pressed to make sense of future changes, and they will also find it more difficult to become the proactive agents of change that we need them to be in order to propel these professions forward in an increasingly information-based economy.

Ronald L. Larsen

Ronald L. Larsen is a professor and dean of the School of Information Sciences (SIS) at the University of Pittsburgh. He was one of the founding deans of the iSchool consortium circa 2003 and the second to chair the iCaucus (2006-08); he has been elected to serve a second term as chair from 2016-18. During the mid to late 1990's, Ron was the assistant director of the Information Technology Office at the Defense Advanced Research Projects Agency (DARPA), where he led research programs in digital libraries, information management, and cross-lingual information utilization, with particular emphases

on interoperability and the development of performance metrics for large scale distributed information systems. His career includes 17 years at the University of Maryland, where he served as assistant vice president for computing, associate director of libraries for information technology, executive director of a 10-university consortium on workforce development, and affiliate associate professor of computer science. Prior to that he managed research programs in automation and robotics at NASA and developed its research program in computer science. Dr. Larsen holds a B.S. in Engineering Sciences from Purdue University, an M.S. in Applied Physics from Catholic University, and a Ph.D. in Computer Science from the University of Maryland College Park.

Cal Lee

Christopher (Cal) Lee is Associate Professor at the School of Information and Library Science at the University of North Carolina, Chapel Hill. He teaches courses on archival administration; records management; digital curation; understanding information technology for managing digital collections; and acquiring information from digital storage media. He is a lead organizer and instructor for the DigCCurr Professional Institute, and he teaches professional workshops on the application of digital forensics methods and principles to digital acquisitions.

Cal's primary area of research is the curation of digital collections. He is particularly interested in the professionalization of this work and the diffusion of existing tools and methods into professional practice. Cal developed "A Framework for Contextual Information in Digital Collections," and edited and provided several chapters to I, Digital: Personal Collections in the Digital Era published by the Society of American Archivists.

Cal is Principal Investigator of BitCurator, which is developing and disseminating open-source digital forensics tools for use by archivists and librarians. He was also Principal Investigator of the Digital Acquisition Learning Laboratory (DALL) project, which incorporated digital forensics tools and methods into digital curation education. Cal has served as Co-PI on several projects focused on preparing professionals for digital curation: Preserving Access to Our Digital Future: Building an International Digital Curation Curriculum (DigCCurr), DigCCurr II: Extending an International Digital Curation Curriculum to Doctoral Students and Practitioners; Educating Stewards of Public Information for the 21st Century (ESOPI- 21), Educating Stewards of the Public Information Infrastructure (ESOPI2), and Closing the Digital Curation Gap (CDCG).

Jamie Lee

Jamie A. Lee is a Doctoral Candidate in Information Resources and Library Science with a Gender & Women's Studies minor at the University or Arizona. Her proposed dissertation project, A Queer/ed Archival Methodology: Theorizing Practice through Radical Interrogations of the Archival Body, emerges from her work with the Institute for LGBT Studies to develop the Arizona Queer Archives (AQA), the statewide LGBTQ archive. The AQA's cornerstone collection and programmatic focus is the Arizona LGBTQ Storytelling Project, which Jamie founded in 2008 as Arizona's first LGBTQ archive and queer oral history collection. Following archival literatures that have traced archival theory and practice from the modern to postmodern, Jamie's dissertation project will argue for and instantiate an archival shift into the posthuman, the call to radically re-define human and non-human as bodies, stories, and practices that are simultaneously becoming and unbecoming within multiply-situated

locations, identities, technologies, representations, and timescapes. In order to develop a Queer/ed Archival Methodology, she approaches the archives as embodied and, therefore, will use the body as a framework to imagine and understand the archive as a body of knowledge and, importantly, a body of multiple knowledges that does not and cannot fit into normative and stable categories as dictated by dominant discourse and ideology. She is alum of the Knowledge River Program. She has worked in film/TV since 1991, has produced, and directed award-winning social justice films that have screened worldwide. She values the power of storytelling – the everyday experts and everyday stories that constitute archives.

Noah Lenstra

The central research question I address in my research is "How do people construct the past in the present?" I investigate how people (individuals and groups) interact with information technologies and information institutions (archives, libraries, museums, media and corporations) in processes of building historical consciousness and collective & personal identities. Understanding how new media effect these processes drives much of my research. My methodological commitments lead me to combine indepth studies of small groups with global & historical contextualizations. Scholarship I find useful in this domain space includes work in community informatics, archival studies, library science, museum studies, public history, cultural studies, memory studies, folklore studies, oral history, tourism studies, family studies, print culture & new media studies, the political economy of information and cultural heritage studies. I have co-developed a Master's level seminar on Digital Public History, and work in the Community Informatics Research Lab, directed by my adviser Kate Williams. I aspire to powerfully communicate the findings of my research both to the scholarly and practitioner communities.

Amalia Skarlatou Levi

I am a Ph.D. candidate at the University of Maryland's College of Information Studies. My research is interdisciplinary and my dissertation explores three main issues: a) the application of digital humanities methods in historical scholarship on diasporas, b) the intersection and linking of archival collections with content produced today online, and c) the affordances and challenges of 'big data' in humanities research. I am particularly interested in Linked Open Data, as well as in emerging content-linking technologies in computer science and their applicability in cultural heritage and history. I am also interested in how archives and museums inform our understanding of our identity and in how memory and identity are articulated and reified in archives, particularly online ones. I have previously worked in museums, developing exhibits, and conducting archival research. I hold a Master's in Library Sciences, and an M.A. in History, concentration in Jewish History, both from the University of Maryland, College Park, and an M.A. in Museum Studies from Yildiz Technical University in Istanbul, Turkey; I completed her B.A. in Archaeology and History of Art in Athens, Greece. For the future, I want to pursue an academic career, and would like to split my time between a history department and an iSchool.

Zach Lischer-Katz

Zack Lischer-Katz is a Library and Information Science PhD candidate at Rutgers University, School of Communication & Information. He studies how knowledge is constructed within archival communities. His research interests include moving image archives, preservation standards, and the documentary practices of preservationists. He has taught courses on Digital Libraries for the Masters in Library and Information Science program at Rutgers University, and Video Preservation for the Moving Image Archiving and Preservation (MIAP) Program at New York University. Before beginning doctoral work at Rutgers, he worked from 2005 to 2012 at New York University as Archive Assistant for the Cinema Studies Department Study Center and Film Archive, curated the weekly Cinema Studies 16mm film series, and assisted with the administration of the MIAP Program.

James Lowry

James Lowry is a doctoral research student in the Department of Information Studies, University College London. His research uses economics theories and models to examine restrictions on access to government records and archives. He is also the Deputy Director of the International Records Management Trust. He has led records and archives management projects in Ethiopia, Nigeria, Russia, and Tunisia, and he was the lead researcher for the Trust's Aligning Records Management with ICT, e-Government and Freedom of Information in East Africa research project, which examined public sector records management capacity across Kenya, Uganda, Tanzania, Rwanda and Burundi in relation to government priorities for computerisation and access to information. He has published on the development of national capacities for government record-keeping (regulatory frameworks, role of national archives, convergence) and access to information (Commonwealth admin istrative traditions, cultures of secrecy, migrated archives, Freedom of Information and Open Data), most recently editing a special issue of Comma; The Journal of the International Council on Archives on government record-keeping in sub-Saharan Africa. He holds a Master of Information Management (Archives and Record-keeping) degree from Curtin University, Australia.

Sue McKemmish

Professor Sue McKemmish, PhD, is Chair of Archival Systems, Monash University, Associate Dean of Research Training in the Faculty of IT, and founding Director of the Monash University Centre for Organisational and Social Informatics. She is engaged in major research and standards initiatives relating to the use of metadata in records and archival systems, information resource discovery and smart information portals, Australian Indigenous archives, community archiving, and the development of more inclusive archival educational programs that meet the needs of diverse communities. Sue McKemmish directs the postgraduate teaching programs in records and archives at Monash, has published extensively on recordkeeping in society, records continuum theory, recordkeeping metadata archival systems, and archival research design and methods. She is a Laureate of the Australian Society of Archivists.

Jennifer Marshall

I am an assistant professor in the School of Library and Information Science at the University of South Carolina. I hold a PhD in Library and Information Science, with a concentration in archival studies, from the School of Information Sciences at the University of Pittsburgh. My primary research interests relate to archival appraisal and to the roles that archives and archivists play in facilitating historical accountability and social justice. My teaching responsibilities lie mainly in the areas of archival administration and preservation management. I view teaching as an ongoing learning process and I enjoy the opportunities and challenges involved in striving towards excellence in teaching in both the traditional classroom and online settings. Regardless of course delivery method, I bring a student-centered approach to teaching. I measure my effectiveness in large part by the success that I am able to facilitate for my students during their learning process and into their careers.

Eleanor Mattern

Eleanor "Nora" Mattern is a doctoral candidate in Library and Information Science at the University of Pittsburgh. Nora's research interests are in the areas of government records, information policy, and information ethics. Her current work explores issues surrounding the ownership of information and cultural materials. At the University of Pittsburgh, Nora has taught a course in Museum Archives and has co-taught courses in Library and Archival Preservation, Archival Appraisal, and Archival Advocacy, Access, and Ethics. Her research has been published in the International Journal of Cultural Property and Library and Archival Security.

Lindsay Kistler Mattock

Lindsay is a doctoral candidate at the University of Pittsburgh School of Information Sciences. Prior to her doctoral studies, she also earned a MLIS with a focus in Archives, Preservation and Records Management and a BA in Film Studies from the University. Her professional experience as a videotechnician and personal interest in filmmaking and photography have shaped her academic interest in the preservation of visual media, both analog and digital, and the recordkeeping practices of media creators. Her dissertation research seeks to investigate the development of archival practices in non-profit media organizations, including media arts centers and media collectives. Lindsay also teaches the Moving Image Archives course offered through the School of Information Sciences each summer, which provides the students enrolled in the MLIS program with an introduction to the history and development of audiovisual archives as well as the principles and practices related to the preservation of audiovisual media.

Katie Pierce Meyer

I am a doctoral student in the School of Information at the University of Texas at Austin. Building collaborative relationships between archives and the architectural community is central to my research agenda. Through my work, I intend to contribute to an active discussion between professionals in libraries, archives and museums and the architectural community to create networks that can result in the sustainability of records that document the built environment. I bring my practice as an archivist and training as an architectural historian to my research focus on the socio-technical environment in

which architectural records are created. My primary concern is a disconnection between contemporary practices in architecture, engineering, and construction and the ability of cultural institutions to preserve the industry's records. I believe that actively working with the community that generates records is crucial to the long-term preservation of records.

I received a BA in Philosophy from Southwestern University in 2002 and completed a MS in Information Studies at the School of Information at The University of Texas at Austin (UT) in 2007. After receiving my MA in Architectural History from the UT School of Architecture, I returned to the School of Information as an IMLS Preservation Fellow. Throughout my graduate education, I have held a project archivist position at the Alexander Architectural Archives, where I am currently processing the Charles W. Moore archives.

Jessica Meyerson

I am the Digital Archivist at the Dolph Briscoe Center for American History and a doctoral student at The University of Texas at Austin School of Information where I study 'the university as an information preservation organization.' My doctoral research examines the intersection between local repository digital preservation and access needs, extra-departmental document creation and storage practices, and university-level information technology policy. My bachelors degree is in Political Science and I earned an MSIS in 2012 with a specialization in Digital Archives and Digital Preservation.

Angela Murillo

I am fourth-year doctoral student at the School of Information and Library Science at the University of North Carolina at Chapel Hill. I received my MLIS from the University of Iowa in May 2010. During my master's program I was a Digital Libraries Research Fellow. I also worked for Digital Library Services and Special Collections and University Archives.

My bachelor's degrees are in Geosciences, English, and Spanish. During my English and Spanish degree I focused mainly on urban studies and transnational literatures. During my Geoscience degree my research was focused in geochemistry and paleoclimatology.

My current research focuses on: (1) scientific data management, reuse and sharing of data, and collaboration; specifically earth sciences, (2) scientific data repositories, data, and metadata; specifically earth sciences, (3) information seeking behavior of scientists, and (4) social and cultural aspects of information seeking behavior and use of information specifically for scientists.

Benedicta Obodoruku

I am a doctoral candidate from Long Island University- Post [U.S.A], concentration on refugees. My research is based on refugees from the Horn of Africa. My visit [recently] to Tanzania refugee camp [conducting interviews, focus group discussions and unobtrusive observations of refugee/camp] has given me a broad experience on the issues of refugees, which I hope to share at the conference.

Gillian Oliver

I currently teach and conduct research in records and archives at Victoria University of Wellington, New Zealand. My most recent professional experience prior to this was as part of the foundation team established to initiate digital archiving capability at New Zealand's national archives. I have extensive experience in online distance education and am particularly interested in the challenges of developing and building innovative and vibrant professional communities in a small country context.

My PhD is from Monash University, and this doctoral study was the catalyst for my ongoing research agenda in organizational culture and information culture. I am editor of the New Zealand archivists' professional journal, Archifacts, and an editor-in-chief of Archival Science.

Alex Poole

A fourth-year doctoral student at the School of Information and Library Science at the University of North Carolina at Chapel Hill and a DigCCurr II Fellow (2010-2013), Alex Poole hails from Connecticut and was graduated from the Loomis Chaffee School (cum laude), Williams College (Highest Honors, History), Brown University (MA, History), and the University of North Carolina at Chapel Hill (MSLS, Beta Phi Mu). He received the 2013 Theodore Calvin Pease Award for "The Strange Career of Jim Crow Archives: Race, Space, and History in the Mid-20th Century American South." Poole's research interests pivot around digital curation, digital humanities, pedagogy, and all things archival.

Waraporn Poolsatitiwat

My three-year experience as a history lecturer and three-month experience as an archive officer remind me that the preservation of historical documents and the awareness of their value in Thailand are underdeveloped. Most Thais including well-educated people have never known what archive is. In their perception, archive is just a place like a library or a museum for exhibiting ancient objects. Although Thai government has implemented law and regulation about archive management for 50 years, it needs improvement in particular human resources. With the passionate of history and the desire to see the progress of archive system in Thailand, I, therefore, decided to take a scholarship from Thai government to study about Archive Management in the United Kingdom (UK) in 2010. After one year studying MA in archives and records management at University of Liverpool from 2011 to 2012, I found that I need more knowledge in archival science and would like to conduct a research relating to archival education. I, therefore, decided to study PhD at University of Liverpool in 2013. As I know that I am assigned to take responsible for managing postgraduate course regarding archives and records management at Silpakorn University after completing this doctoral degree program in 2016, I selected to do my PhD thesis relating to my future job. My thesis aims to design archival training course in Thailand to (1) meet international standards and contemporary need, (2) fit with Thai environment and culture, (3) comply with Thai educational system and (4) achieve market need.

Ricardo Punzalan

Ricky Punzalan is an assistant professor of archives and digital curation at the University of Maryland's College of Information Studies. He holds a Ph.D. in Information from the University of Michigan's School of Information. In addition to an MLIS from the University of the Philippines, he completed two

certificates of graduate studies at Michigan, one in Science, Technology, and Society (STS) and another in Museum Studies. His dissertation project examined virtual reunification as a strategy to provide integrated access to dispersed ethnographic archival images online. Punzalan has been active internationally in developing community archives. In May and June 2009, he worked in Techiman, Ghana, to establish the archives of the traditional council and studied the impact of placing this archival unit within a proposed community heritage center. From 2005 to 2006, he organized the archives of Culion, a former leprosarium in the Philip pines, and curated a museum exhibit for the centennial of the community's founding as a segregation facility. Prior to his doctoral work at Michigan, he taught on the faculty of the University of the Philippines School of Library and Information Studies, where he served as assistant professor of archives and library science and as museum archivist for the Vargas Museum. His articles have been published in Archives and Manuscripts, Archivaria, and Archival Science.

Sarah Ramdeen

Sarah Ramdeen is a doctoral candidate at the School of Information and Library Science at the University of North Carolina at Chapel Hill. She is the project coordinator for the IMLS sponsored program - Educating Librarian in the Middle East: Building Bridges for the 21st Century (ELIME-21) and a student fellow in the Earth Science Information Partners Federation (ESIP).

Her research interests include the information seeking behavior of geologists when seeking physical sample materials. Physical samples cannot be completely digitized but often have digital materials associated with them. These hybrid collections have unique curation needs which can be better understood by investigating how users access and use these collections.

Ms. Ramdeen holds a BS in Geology and a BA in Humanities from Florida State University (FSU). She also holds an MS in Library and Information Studies with a Certificate in Museum Studies from FSU. In the fall of 2006 she was an intern in London at the Natural History Museum and before entering the PhD program at UNC, she worked for the Florida Geological Survey.

Additional information can be found on her website, http://ramdeen.web.unc.edu/.

Mario H. Ramirez

Mario H. Ramírez is doctoral student in the Department of Information Studies at the University of California, Los Angeles where his research interests include the role of states of repression in the creation of documentary evidence, the archiving of human rights violations in Latin America and the construction of memory and national identities in post-conflict societies and their Diasporas. He is author of "Witness to Brutality: Documenting Torture and Truth in Post-Civil War El Salvador" in Archiefkunde, "The Task of the Latino/a Archivist: On Archiving Identity and Community" in Interactions: UCLA Journal of Education and Information Studies, and co-author, with Laurence Lepetit and Patrizia Lapiscopia, of "The Role of Social Media and Web 2.0 Technologies in the Protection of Cultural Heritage." He is a founding member of the U.S. Chapter of Archivists without Borders, co-chair of the Displaced Ar chives Project and is a steering committee member of the Manuscript Repositories Section of the Society of American Archivists. In addition to an M.S. in Library Science and Certificate in Archives and Records Management from Long Island University, C.W. Post, he holds a B.A. in American

Studies from the University of California, Santa Cruz and an M.A. in Rhetoric from the University of California, Berkeley.

Gina Rappaport

I am an incoming doctoral student in the University of Maryland's College of Information Studies; my advisor is Dr. Ricardo Punzalan. I received my MA in History, Archives, and Records Management from Western Washington University in 2007. My research interests orient on the intersection of historiography and archival research, and the implications of archival practice on the historical record. I am concerned with the integration of archival theory into practice, especially with respect to the management of photographic collections; I explored some of these concerns in my master's thesis, Limitations and Improvements in the Archival Management of Photographs. Another area of strong interest is the responsive and respectful care of archival materials relating to indigenous communities, and I wish to explore ways to bridge epistemological conflict in the management of intangible cultural heritage materials. I am active in the professional community, currently serving as vice-chair/chair elect for the Native American Archives Roundtable of SAA.

Professionally, I am the Archivist for Photograph Collections and Head Archivist at the Smithsonian Institution's National Anthropological Archives, a position I have held since 2009. Before joining the Smithsonian, I was a project archivist at the National Oceanic and Atmospheric Administration's Pribilof Project Office where I co-authored The Pribilof Islands, a Guide to Photographs and Illustrations, a publication on historical visual resources relating to Pribilof Islands History. Prior to this I worked as a project archivist for a variety of individuals and institutions, including the University of Washington, The National Park Service, and the Winthrop Group.

Vanessa Reyes

Vanessa Reyes is a Doctoral Student at the Graduate School of Library and Information Science at Simmons College. She holds an M.S. in Library and Information Studies from Florida State University and a B.A. in English from Florida International University.

Having worked in legislative, university, and public libraries, she became interested in exploring the PIM field when she noticed that researchers' interest were sparked when they used appropriately organized and preserved personal collections for scholarly work.

Her current research contributes to the emerging field of personal information management (PIM), quantifying how individual users are organizing, managing, and preserving digital information.

Future goals consists of finding ways to make a sustainable difference in how our digital heritage is preserved for future generations by examining trends of how individual users are managing and preserving their information.

Robert Riter

My name is Robert Riter. I am an assistant professor in the School of Library and Information Studies at The University of Alabama, where I coordinate its newly developed archival studies concentration. My doctoral work was supervised in the School of Information Sciences at the University of Pittsburgh.

My research focus is in the area of archival history. I currently work on topics related to the foundations of archival thought and practice and the history of American documentary editing. The overall objective of this work is to identify and evaluate the threads of archival thinking that continue to influence archival theory and practice, offering an archeology of archival thought, and a useful discussion of its influence on contemporary archival practices.

At The University of Alabama, I teach in archival studies, history of the book, and the organization and description of information. In my role as an archival educator, I believe that my most critical function is to assist students of archival studies in becoming critical readers of information objects. An archival object is made up of cultural, intellectual, and material substances, all of which influence how an object will be contained, maintained, and managed by the archivist. Through proper critical readings of archival objects, archivists can develop more effective methods for treating these works in their daily practice, and also obtain a better understanding of the consequences of their own archival interventions.

Greg Rolan

After a 30-year career in IT spanning enterprise systems management, software architecture and development, industry training, and a high-tech start-up, I returned to university to study community informatics and qualified as a librarian. However, having caught the study/research bug, I completed my masters (Honours) degree while also teaching at the university. My master's thesis took a design-science approach to investigating archival systems interoperability and identified a number of technological and social barriers to equitable and consistent community access to institutional archives. I am now a doctoral candidate, concerned with investigating these barriers. My research will comprise theoretical as well as design-science/action-research investigations of systems interoperability, conceptual modelling in archival informatics, metadata standards-setting, and organisational/social factors in archival systems design and implementation.

Heather Ryan

I will begin my appointment as Assistant Professor at the University of Denver Library and Information Science Program in March 2014, where my teaching will center on archives and digital information management.

I was a Carolina Digital Curation Doctoral Fellow at the School of Information and Library Science at the University of North Carolina (SILS-UNC) at Chapel Hill from 2008-2011. I will defend my dissertation, Who's Afraid of File Format Obsolescence? Evaluating File Format Endangerment Levels and Factors for the Creation of a File Format Endangerment Index, in March 2014, and I will complete a Ph.D. in Information and Library Science from SILS-UNC in May 2014.

I received a Master's degree in Library and Information Science from the University of Denver, and a Bachelor of Fine Arts in Painting from New Mexico State University. I spent substantial portions of my adult life working in libraries. I worked on special collections and archives projects where I digitized, created EAD finding aids, and metadata for archival collections at the University of Denver. My primary research interests revolve around the challenges associated with the long-term management of digital information, and I hope to help make this process easier and more sustainable for archivists in the future.

Takahiro Sakaguchi

Takahiro Sakaguchi is an Assistant Professor at Kyoto University Archives, Japan. In addition to doing his own research, for the past three years he has been responsible for many professional tasks at one of the largest university archives in Japan. He was a researcher in the Department of Archival Studies in the National Institute of Japanese Literature, and has engaged in archival work at several universities. In 2014, he is expected to receive a Ph.D. in archival science from the Graduate School of Humanities, Gakushuin University. Supervised by Professor Masahito Ando, his dissertation explores the formulation of recordkeeping systems and methodologies in the United States and their introduction and transformation in modern Japan. In 2008, he entered the university's Graduate Course in Archival Science as one of the first doctoral students. He holds a B.A. in law (2002) and M.A. in Cultural Information Resources (2004). His research interests include the installation and diffusion of Western recordkeeping systems in modern Japan, the interaction between academic archival disciplines and business-like records management procedures, a comparative history of records management in the United States and Japan, the relationship between filing systems and archival finding aids, and, finally, organizational culture and recordkeeping methodologies. As a part-time lecturer, he has taught records management and archives to undergraduate students for six years at Shizuoka University and Surugadai University.

Kay Sanderson

Kay Sanderson has been involved in New Zealand's tertiary education sector since 2005, initially as a Lecturer at the Open Polytechnic of New Zealand and more recently as a casually employed teaching assistant and a PhD student at Victoria University of Wellington. In the earlier stages of her career, she worked as a practitioner in both archives and libraries. Kay's philosophy in research and teaching is critical with transformatory aspirations. Her thinking has been deeply influenced by the philosophy of knowledge known as critical realism, Bruno Latour's writings on actor-network theory, Frank Upward's continuum theory, and by ideas about digital materiality and technogenisis that are emerging in digital humanities scholarship. All of these bodies of work open the way for seeing knowledge, evidence, systems, records, and purportedly "other" types of heritage objects in terms of space-time and stance contingent connectedness, rather than in terms of narrow definitions, fixed closed categories, and rigidly opposed epistemological stances. The title of Kay's thesis is Digital materiality, heritage objects, the emergence of evidence, and the design of knowledge enabling systems. It is a philosophy-led and case study informed conceptual analysis and evaluation of the competing discourses that exist within the archives domain and a reflection on the relevance of key archives domain concepts and practices for the design of knowledge enabling systems in the heritage collecting community.

Kirk Savage

Kirk Savage is a professor in the Department of History of Art and Architecture at the University of Pittsburgh. He has published widely on public monuments in the U.S. for the past thirty years. He is the author of two prize-winning books, Standing Soldiers, Kneeling Slaves: Race, War, and Monument in Nineteenth Century America (Princeton, 1997) and Monument Wars: Washington D.C., the National Mall, and the Transformation of the Memorial Landscape (University of California, 2009).

Anna Sexton

I have previously worked as an academic researcher at UCL (LEADERS Project) as well as an archive manager in a local authority context and I am now in my final year of a PhD at UCL. My research interests are focused on exploring how archival processes can become more participative; as well as looking at ways in which academics can work collaboratively 'with' and 'not' on communities. My PhD research is based in the Special Collections Department at the Wellcome Library in London and has involved Participatory Action Research with a marginalized stakeholder group to build a new digital archive collection based around lived experiences of recovery in mental health. In exploring the institutional context in which this research is embedded I am currently analyzing the historical development of the Wellcome's existing archival holdings in relation to mental health to examine the extent to which (and the reasons why) voices from individuals with lived experience are excluded from the historical record. I am also seeking to understand how current practice, policy and attitudes within the Special Collections team may create barriers both to the adoption of participatory approaches and to addressing exclusions within the collections. The broad aim of my current research (both within my PhD and beyond) is to examine how mainstream institutions work with their stakeholders and communities and to explore the degree to which it is possible for the mainstream to foster genuinely participative external relationships where authority and control is equitably shared.

Kelly Shaffer

Kelly Shaffer is now the Assistant Director of Marketing & Communications for the University of Pittsburgh School of Nursing. While the Director of External Relations at Pitt's iSchool, she helped numerous faculty and students describe complex research problems, processes and outcomes for journal articles, conference posters and presentations, job talks, and meetings with corporate partners. Before joining the University of Pittsburgh, Ms. Shaffer worked in marketing and sales for a broad range of non-profits covering the arts, history and heritage, performing arts, as well as an engineering firm.

Seth Shaw

Seth Shaw's teaching and research focus is on the impact of electronic records archival principles and practice. Class discussions emphasizes analyzing articulating theory and providing examples of practical implications. His research investigates practical solutions to electronic records workflow and management issues.

Seth received his Bachelors of Science in Information Systems from Brigham Young University – Idaho in 2005 and then his Masters of Science in Information, Archives & Records Management from the University of Michigan's School of Information in 2007. From 2007-2013 he was the Electronic Records Archivist for Duke University Archives where he was responsible for everything born-digital in the University Archives & Special Collections. In addition to his instruction at Clayton State he teaches the Society of American Archivists' "Managing Electronic Records in Archives & Special Collections" workshop as part of the Digital Archives Specialist curriculum. He has also taught workshops for the Society of North Carolina Archivists and South Carolina Archivists Association. Seth is a past chair of the Electronic Records Section of the Society of American Archivists and currently serves on its Steering Committee.

Rebecka Sheffield

Rebecka Sheffield is a doctoral candidate in the Faculty of Information at the University of Toronto and the Mark S. Bonham Centre for Studies in Sexual Diversity Studies. Her research draws from social movement theory and archival studies to explore the trajectories of queer archives as social movement organizations. Rebecka's dissertation project examines queer archives at a particular moment in time when the socio- political environment has opened up opportunities for these organizations to engage with the mainstream in ways previously unavailable. She has served as guest editor of Archivaria's Special Section on Queer Archives and has been published in Museum Management & Curatorship and American Archivist. She is a volunteer archivist at the Canadian Lesbian and Gay Archives in Toronto.

Donghee Sinn

Donghee Sinn is an Assistant Professor of the Department of Information Studies, University at Albany (State University of New York). She specializes in Archives and Records Management, and her research interests focus particularly on the archival research in relation with personal archiving and public memory in the digital environment and archival use/user studies of primary sources in digital formats. Her current projects include quantitative approaches to personal digital archiving practices. She has a Ph.D. in Library and Information Science from the University of Pittsburgh. Previously, she worked at the National Archives of Korea in acquisition and appraisal.

Heather Soyka

Heather Soyka is a current doctoral student in archival studies at the University of Pittsburgh's School of Library and Information Sciences. Her research interests include recordkeeping behavior, documentation of war and conflict, knowledge transfer, community recordkeeping, and the relationships between organizational and personal records. Her dissertation centers on using the participation and record creating behaviors of active military officers within a particular community of practice as a lens for exploring what this can reveal about the records continuum as a model. She holds a master's degree from the Graduate School of Library and Information Science at Simmons College with a concentration in archives and records management.

As a teaching fellow, teaching assistant, and research assistant at the University of Pittsburgh iSchool, Heather has taken advantage of the opportunity to explore issues of access, advocacy, and

sustainability in the classroom. Teaching a variety of archives and preservation courses, as well as providing support for LIS courses related to technology, copyright, research methods and management has allowed her to build a personal foundation and philosophy of balanced teaching and research practices.

Tamara Stefanac

I am currently the Director of the Croatian Railway Museum. My professional development began, however, while I was working as a museum archivist at this museum and I started questioning the relationships between information and archival theory and their application in daily practice. I earned a Masters' Degree in Art History and Comparative Literature and a Masters' Degree in Archivistics at the University of Zagreb (Croatia). I am currently a postgraduate student at the University of Zadar (Croatia) in the field of Archival Science. In my doctoral research paper entitled "The Conceptualization of Archival Materials Held in Museums" I examine different perspectives in the description of archival materials in museums and the relationships between what is considered to be an archival item and what a museum object.

Jenny Stevenson

Jenny Stevenson recently finished her second year of doctoral work at University of Wisconsin-Milwaukee. Jenny graduated with a MLIS and concentration in Archival Studies in December 2010. She then went on to receive her Certificate of Advanced Study in Digital Libraries. Her research interests are invested in the field of archival studies. Specifically, digital archives, new and social media, and user studies and archival software development. She is interested in information retrieval and the social impacts of information and communication technology amongst different user groups.

Professionally, Jenny has been working in the world of digital archives. Over the past several years she has worked at several institutions as a digital archivist consultant.

Naya Sucha-xaya

I started my academic career path in the field of archives by assisting in historical research on the dissemination of Buddhist sacred texts from Thailand inside and outside of the country in the nineteenth century during the era of imperialism in Southeast Asia. From these beginnings as a user of archives with personal interest in culture and society, I earned a master's degree in archives and records management and am now conducting PhD research in archival science on sociocultural impacts on archival practice.

My academic interests include studying the different values of archives and their relation to society. My research objectives are to increase the profile of archives in Thai society and to help people see their connection with archives so that they can more readily recognise the value of archives in their lives.

My scholarship philosophy in pursuing these objectives includes participating in the advancement of the field of archives, understanding the social side of archives and maintaining relationships with other disciplines.

Tonia Sutherland

Tonia Sutherland holds a BA in theater, history and cultural studies from Hampshire College and an MLIS from the University of Pittsburgh. Tonia has worked as a Research Library Resident in Special Collections & University Archives and Reference Services at the University of Massachusetts Amherst in addition to serving as University Archivist at the same institution. More recently, as Records Management Coordinator for Bucknell University, Tonia created and implemented a campus-wide Records Management initiative. Now a doctoral candidate at the University of Pittsburgh, Tonia's research interests include information policy, critical heritage studies, intersections between technology and the arts, and examining connections between contemporary archivy and forms of intangible cultural heritage. Tonia's dissertation examines the ways performance is persistently represented in archives, exploring issues of archival custody and problematizing prevailing notions of information as evidence in archives. In addition to her research, Tonia is a dedicated educator. She teaches courses such as Archives and Performance, Archival Access and Representation and International Perspectives on Archives at Pitt's iSchool.

Biyong Tan

Biyong Tan is an associate professor in the School of History and Culture, Shandong University. He holds a doctorate in Archival Studies from the School of Information Management, Wuhan University. His research interests include Archival education and professional responsibility, Community archives and Cultural Identity, digital preservation of intangible cultural heritage. He has finished two research projects sponsored by Shandong Postdoctoral Science Foundation and Humanities and Social Science Foundation of Ministry of Education of China. Currently he is the principle investigator (2013-2016) sponsored by National Social Science Foundation of China: The Comparative Study of Public Archives Growth Path between China and Western Countries: Theory, Practice and Solution. With the annual fund from China Scholarship Council, he now takes up a visiting scholar position in the Department of Information Studies at the University of California Los Angeles from August 2013 to August 2014.

Narissa Timbery

I am an Aboriginal woman from the New South Wales South Coast, Australia. With a Bachelor of Education my early career was in education. Whilst working at the University of Wollongong's Aboriginal Education Centre (AEC) as an Aboriginal Studies resource officer and part time teacher I found that I was being drawn to the field of Information Management (specifically archives) rather than teaching. In 2005 I started my new career choice by undertaking a Masters of Information Management and Systems, which I completed in 2009.

I commenced part time work as a Document Officer for the Australian Institute of Aboriginal and Torres Strait Islander Studies (AIATSIS) Audiovisual Archive. In this role I digitized paper records, auditioned sound recordings and compiled finding aids. I then worked in the Access unit where I facilitated access to the collections. My last role at AIATSIS was in the Library as Archivists/Manuscripts Officer, where I worked with the manuscript collection.

I found my passion and have not looked back. My work with AIATSIS reflected this passion. It provided me with opportunities to research and understand the collections whilst providing documentation to assist others who want to also access the collections.

I commenced my PhD 'Visualising Country: Archiving Virtual 3D Models' in August 2013 at Monash University. My research will provide me with further opportunities to work with Indigenous communities. My ambition is to produce a body of work that will be of use for Indigenous communities who are trying to preserve material on Country.

Andy Uhrich

I am PhD student in the Film and Media Studies program at Indiana University. I am currently scoping out my dissertation project on a history and ethnography of amateur forms of media archiving focusing on the contentious relationship between archives and private film collectors. This examination of vernacular archiving is an outgrowth of my interest in participatory forms of media making including my work on the board of the Center for Home Movies. My goal is to make audiovisual archiving more of a community-based practice, where the decisions on what is selected for the archive and how, and in fact what constitutes an archive, is an open process between a range of stakeholders.

This focus on the community arises from my work at the Chicago Film Archives, where archival films are directed back to the specific neighborhoods where they were originally filmed, both geographically and demographically speaking.

In 2010, I graduated from the Moving Image Archiving and Preservation graduate program from New York University. My thesis considered issues of preserving early computer art and the challenges facing an independent archive without the institutional funding for large-scale digital infrastructure.

I have been lucky enough to teach a moving image preservation class to graduate students at Indiana University's library school. I found it an exciting challenge to translate my work and educational experiences into a useful curriculum imparting real-world skills to other students interested in archives and media preservation.

David A. Wallace

Hi. I have been a full-time graduate archival educator since 1997. Core courses I teach include: Understanding Archives: Principles and Practices; Archival Appraisal; Research Seminar on Archives, Evidence and Social Memory; Management of Electronic Records, and; Records Management. For over two decades I have published and presented in a wide range of professional fora, examining: recordkeeping and accountability; archiving and the shaping of the present and past; social justice impact of archives; freedom of information; government secrecy; Wikileaks; professional ethics; electronic records management; online music archives, and; graduate archival education. My research focuses primarily on the intersections between archives, ethics, and social justice. This work is oriented toward the politics of record-making and record keeping and how they shape and often mis-shape the construction of the past and present. I connect these themes to broader social contexts as well as to professional responsibilities and praxis through the development of conferences, publications, and projects.

I am editor of a special double issue of *Archival Science* on "Archives and the Ethics of Memory Construction" (2011); co-editor of *Archives and the Public Good: Accountability and Records in Modern Society* (2002), and served as the Series Technical Editor for twelve volumes of the National Security Archive's *The Making of U.S. Policy series* (1989-1992), including a volume on South Africa (I also served as the National Security Archive's Records/Systems/Database Manager). Over the past five years my major publications include: "Social Justice Impact of Archives: A Preliminary Investigation," *Archival Science* 13 (no. 4. 2013): 317-348; "Understanding the 9/11 Commission Archive: Control, Access, and the Politics of Manipulation," *Archival Science* 11, (nos. 1-2, March 2011): 125-169; "Locating Agency: Interdisciplinary Perspectives on Professional Ethics and Archival Morality," *Journal of Information Ethics* 19 (No. 1, Spring 2010): 172-189, and; "Co-creation of the Grateful Dead Sound Archive: Control, Access and Curation Communities." In *Communities and Their Archives: Creating and Sustaining Memory* (2009): 169-193.

From 2002 – 2005, I was the key partner in envisioning and establishing the Freedom of Information Programme (FOIP) at the South African History Archive (SAHA), University of Witwatersrand (www.saha.org.za/about saha/freedom of information programme.htm). This project tests South Africa's Promotion of Access to Information Act (PAIA) to build collections of declassified documents, establish PAIA precedents, and build PAIA capacity across civil society. I designed and instituted the programme's information support systems and collaborated on ongoing programme development. Since 2009 I have served as primary collaborator and project archivist to Stories for Hope – Rwanda (SFH), an inter-generational dialogue project that combines psychology with archives. It examines how archival work can impact contemporary dynamics over memory. SFH's main motivations are to assist youth in overcoming a violent legacy and capturing-recapturing family, community, and Rwandan history. The archival component of this project combines theories and practices of collective narrative work developed for communities who have experienced severe hardships and trauma with emergent archival scholarship and praxis on social memory development/transformation and participatory/community archiving. I developed the project archives, resulting in the capture, preservation, and dissemination of over 100 recorded dialogues through the project website (www.storiesforhope.org/) and via formal deposit with the National Archives of Rwanda. I also coproduced an interactive multimedia exhibit on this project, launched at the National Archives of Rwanda in October 2012. From 2010-2102 I was Co-PI on a National Endowment for the Humanities Preservation Education and Training grant entitled Preservation and Access Virtual Education Laboratory for Digital Humanities. This project developed and implemented a virtual laboratory integrating digital access and preservation tools into five masters' level courses in two specializations at the School of Information: Preservation of Information (PI) and Archives and Records Management (ARM). All project materials are freely available on the project website for incorporation by other archival education programs (http://www.virtualarchiveslab.org/)

Currently, I am involved in a research collaboration on *Social Justice Impact of Archives* with archives faculty colleagues from University of Toronto (Wendy Duff) and University College London (Andrew Flinn). To date we have demonstrated that, while there is a growing and accelerating interest within archives discourses regarding the roles that archives can and do play in social justice struggles, the use of the term is imprecise and fragmented. We articulated an archival – social justice framework and identified potential models for assessing impact. Follow-up work to date has involved developing a dozen preliminary narrative case studies and convening a workshop on elaborating the "impact" component of this work. We believe that elaborating the actual and potentiality "instrumentality of

archives" vis a vis social justice impact will clarify how and the circumstances under which archives and archival work makes a social justice-related difference. Finally, I am currently a co-Principal Investigator to the *Community, Memory, and Ethical Access to Music from The Ark and the African Field* project along with UM faculty colleagues Kelly Askew (Anthropology) and School of Information Associate Professor Paul Conway. This project is building a prototype web-based content management platform for delivering digitized and preserved sound recordings of live performances at Ann Arbor's "Ark" folk and Americana venue, live field recordings of the Voice of America's "Music Time in Africa" developed by Leo Sarkisian, and a collection of Tanzanian cassettes from small local recording studios. We seek to engage communities of musicians, music scholars, students, and fans of Americana and World music in describing songs and the assembling memories of performances using a common metadata model. We also seek to experiment with alternative intellectual property management configurations to ensure that these performances are made more widely known and more readily accessible to a wide cross section of users.

In regards to my teaching philosophy, it is centered on an advocacy of lifelong learning, personal responsibility, and personal inspiration and the opportunity to improve on all of these fronts. The objective is not peer comparison but rather individual challenge and growth through self-driven passionate engagement with course materials and concepts. My classroom is a safe place to respectfully discuss and debate ideas ("play the ball not the person") by encouraging critical analysis over passive learning. I strive to get students to recognize key issues in contemporary society and understand how the failures and successes of recordkeeping and archiving have concrete and frequently quite dramatic impacts on individuals, organizations, and societies. This exercise also highlights to them their agency and responsibilities as information professionals by encouraging them to see beyond the information "box" and understand structural relationships between information management and the health of society.

Kelvin White

Using social justice as a framework, Dr. Kelvin White's research examines the interconnections between the social, cultural, and historical contexts in which recordkeeping activities exist and the implications they have for marginalized or underrepresented communities; critically interrogates contemporary archival theory and other constructs such as archival education and practice; and develops ways in which education and pedagogy might contribute to cultural relevancy and sensitivity in archival practice and research. His current research includes understanding how tribal culture influences recordkeeping activities in Osage and Comanche nations of Oklahoma.

Dr. White is a co-principal investigator of the Archival Education and Research Institute (AERI), which is a collaboration of archival education programs that aims to educate a new generation of academics in archival education who are versed in contemporary. He is also the Vice President of the International Council on Archive's Section of Archival Education and Training (SAE) and is the Co-Chair of the Society of American Archivists' Cultural Heritage Working Group (CPWG).

Eliot Wilczek

Eliot Wilczek is a doctoral student in the Graduate School of Library and Information Science at Simmons College, and currently serves as the Acting Director for Digital Collections and Archives at Tufts University. He holds an MS in library and information science with an archives concentration and an MA in history— both from Simmons College. He served as an adjunct instructor at Simmons GSLIS from 2005 through 2010, teaching archives and records management courses.

His research interests center on recordkeeping behavior, records management, and archival appraisal. His dissertation explores the relationship between how organizations understand and document wicked problems through an examination of US advisor province reports written during the Vietnam War.

Heather Willever-Farr

I hold a master's in history and am pursuing my doctorate in information studies at Drexel University. In addition to my doctoral work, I teach courses on archives and nursing informatics. Previously, I managed the American College of Physicians' archives and records management program, and served as the State of Indiana Electronic Records Archivist and the head of the State of Indiana's records management program. I also served as a project archivist at the Historical Society of Pennsylvania, the University of Wisconsin Archives, and the History Division of the National Library of Medicine.

My doctoral research focuses on the collaborative production of family histories on the websites such as ancestry.com and findagrave.com. To build an understanding of the social and technical features of websites for collaborative content building, I study online artifacts produced by website contributors, the systems that support these production activities, and website contributors' experiences with collaborative work. Family history researchers' (FHRs) collaborative content production results in rich information and primary materials worthy of long-term preservation, yet much of this activity is occurring outside of the walls of memory institutions on commercial- and community-based websites. Building an understanding of the social norms, the research and content production practices, and the tensions and conflicts that arise within these online communities is necessary if memory institutions hope to have a role in the long- term preservation of this content. Les sons learned from these communities may also help to inform archival participatory practices and the design of participatory spaces on archival websites.

Stacy Wood

Stacy Wood is currently a second year doctoral student in Information Studies at the University of California Los Angeles. She has a Bachelor of Arts in World Literature and Gender Studies from Pitzer College and a Masters in Library and Information Studies from University of California Los Angeles. She is currently working with the Center for the Study of Women on an NEH funded project to process, digitize and publicize the June L. Mazer Lesbian Archives. Her research interests are archival history, government documents, military intelligence, infrastructure studies, critical bureaucracy studies and the role of archival documents in popular culture.

Laura Wynholds

I am a doctoral candidate in Information Studies at the University of California, Los Angeles. My studies have focused on data practices in the sciences, with an emphasis on questions of data stewardship, curation, and sharing. My dissertation research explores cases where health data and medical information structures produce and reinforce information disparities for marginalized communities.

Prior to coming to UCLA I earned an MLIS from the University of Wisconsin, Madison and worked at the UC Davis Libraries for 8 years.

Elizabeth Yakel

Eizabeth Yakel is a Professor at the University of Michigan School of Information where she teaches in the Archives, Records management, and Digital preservation areas. Her teaching goal is to create engaging and challenging learning experiences the help students to become change agents in the archival profession. Beth's research focuses on the use and users of archives, particular digital archives and collections. Her current research project is Dissemination Information Packages for Information Reuse (http://dipir.org) funded by the Institute for Museum and Library Services. This research focuses on data reuse in three disciplinary communities: quantitative social science, archaeology, and zoology. Previously research projects include the Archival Metrics Project and the Economic Impact of Archives Project (http://archivalmetrics.org) (funded by the Andrew W. Mellon Foundation and the National Historical Publications and Records Commission). Beth is a Fellow of the Society of American Archivists.

Ayoung Yoon

I am a doctoral candidate in the School of Information and Library Science at the University of North Carolina at Chapel Hill. I have an MSI from the School of Information at the University of Michigan Ann Arbor, specializing in both archives and records management & preservation of information, along with a BA in history from Ewha Womans University, South Korea.

My broad research interests include digital preservation, data curation, and personal digital archiving. I am currently working on my dissertation, which explores data reusers' trust judgment during the process of data reuse and implications for data curation.

Eunha Youn

Eunha (Anna) Youn is a research faculty in Graduate School of Archives and Records Management in Chonbuk National University, Korea. Her research focuses on culture, society and archival technology. She is especially interested in the effects of cultural elements on archival technology. Her current research is to explore how the concept of community archives is applying to non-western local environment in Korea.

Jane Zhang

Jane Zhang is an assistant professor at the Department of Library and Information Science, the Catholic University of America (CUA-LIS). She holds a PhD in Library and Information Studies with archival concentration from Simmons College, Boston (2011), and a joint Master of Archival Studies (MAS) and Library and Information Studies (MLIS) from the University of British Columbia, Canada (2001). Before joining the CUA-LIS in 2011, Jane worked at the Harvard University Archives as a records analyst (2003-2010) and at the University of Calgary Archives as an assistant archivist (2001-2003).

Jane Zhang is a key faculty member in the CUA-LIS Cultural Heritage Information Management (CHIM) course of study. She currently teaches three CHIM courses: Archives Management, Electronic Records and Digital Archives, and Digital Curation, and one LIS foundation course: Organization of Information. Her research areas cover records and recordkeeping, archival theory and practice, electronic records and digital archives, and theory and application of information organization and representation. Research papers she has recently published or submitted include: "Archival Representation in the Digital Age" (Journal of Archival Organization 10, 2012), "Original Order in Digital Archives" (Archivaria 74, 2012), "When Archival Description Meets Digital Object Metadata: A Typological Study of Digital Archival Representation" (American Archivist 76, 2013), "Recordkeeping in Book Form: The Legacy of American Colonial Recordkeeping", "Electronic Records in the Archival Curriculum", and "Correspondence as a Documentary Form and Its Persistent Representation in Digital Archives".

Accommodations

AERI attendees will be staying in Ruskin Hall on the University of Pittsburgh campus. Ruskin hall is located at **120 Ruskin Avenue.**

Pillows, bed linens, 1 bath towel, and 1 washcloth are provided. Toiletries are not provided. There will be a towel exchange offered on Wednesday, July 16. Those who would like fresh towels can take their dirty towels to the main desk on

the first floor and replace them with a clean set.

Check-In / Check-out

AERI participants may check-in on **Sunday**, **July 13**th **from 2:00 – 6:00 in the lobby of the School of Information Sciences**, **135 N. Bellefield Ave.** Those arriving before or after the official check-in may pick up their room key from the security guard at Ruskin Hall. When participants depart, room keys should be left at the security desk.

Parking

Parking permits for those who purchased them will be available at check-in at the School of Information Sciences at 135 N. Bellefield Avenue. There is street parking at no charge on Sundays to allow you to check in, pick up your permit, and proceed to the RA Lot on the corner of Bellefield Avenue and Fifth Avenue.

Emergency Numbers

A security guard is stationed in Ruskin Hall 24 hours a day, 7 days a week. Any issues that require immediate attention should be reported to **Panther Central at 412-648-1100**, where someone is always available to assist.

- University Police/Fire: 811 or 412-624-2121
- Phone/Data Technology Help Desk: 4-HELP (4357) or http://www.technology.pitt.edu.

Internet

Guest Instructions for internet access can be found at: http://technology.pitt.edu/Documents/network/wireless/Connecting_to_Guest_Wireless.pdf

Meals

A continental breakfast will be provided before the plenary session each morning at Bellefield Hall. Lunch will be provided at Litchfield Towers for participants Monday-Thursday. Additional purchases can be made with the Panther Cards provided at check-in.

Panther Cards and Panther Funds

Each attendee will receive a Panther Card loaded with \$50 in Panther Funds for additional expenses during your stay in Pittsburgh. Panther Funds may be used to purchase food, beverages, merchandise, and other services on and off campus. Look for the Panther Funds logo at participating locations. A full list of on-campus and off-campus merchants can be found at https://www.pc.pitt.edu/card/merchantlist.php.

Getting Around Pittsburgh

!! Caution: Beware of the bus lane: A bus lane runs along Fifth Avenue in the opposite direction to the one-way traffic. When crossing Fifth Avenue, look both ways to be safe.

As a transportation hub for the region, navigating from Pitt's Campus in Oakland is barely an effort. While the bus system goes nearly everywhere, one thing Pittsburgh doesn't have much of is cabs. With few companies holding a monopoly, you generally have to call a cab. You just don't see them often enough to hail them in the street (unless you're on East Carson Street, late at night—then you've got a good chance to hitch a ride home!).

One of the other advantages of Pittsburgh's size is its safety. It's a mid-size city, and its crime rate is low. Plus, each university, including Pitt, has its own police force. Community-based policing is the rule, and each community takes the safety of its residents very seriously.

Pittsburgh also has a unique way of labeling the interstates around town. Rather than referring to the interstates by their numbers, traffic controllers call them "parkways." There are three parkways—the Parkway East (I-376), the Parkway West (I-279 south, Rte. 22-30), and the Parkway North (I-279 north). Luckily, traffic isn't so bad that you spend a lot of time feeling "parked" on the parkways!

For general tips on navigating Pittsburgh see http://www.coolpgh.pitt.edu/transportation/

Bus schedules can be accessed through the Port Authority -

http://www.portauthority.org/paac/default.aspx. The 61 and 71 busses will get you downtown from any of the bus stops on Fifth Avenue. The closest bus shelter to SIS and Ruskin Hall is located at Fifth and Tennyson.

Taxis are not readily available in Pittsburgh. If you would like to take a cab, you will need to call for a ride 412-321-8100 http://www.pghtrans.com/yellow_cab.cfm

To/From the Airport – General information about airport transportation can be found at http://www.pitairport.com.

- You can arrange for a taxi by calling 412-321-8100
 http://www.pghtrans.com/yellow_cab.cfm. The fare and tip should cost around \$50.00.
- For those arriving or departing as a group, consider using the **Super Shuttle** http://www.supershuttle.com or 800 Blue Van (800/258-3826). A one-way trip is estimated at \$27.00 for the first person and \$9.00 for each additional person.

Or, **public transportation** is an option, though the schedule is limited on Sundays. The **28X Airport Flyer** will get you to and from Pitt Campus for \$3.75 each way (exact change is required). Airport \rightarrow Pitt: the bus stops at Bellefield Ave and Fifth (look for the Cathedral of Learning), one block from the School of Information Sciences. Pitt \rightarrow Airport: pick up the bus at 5th and Tennyson (approx. two blocks from the School of Information Sciences).

Navigating from SIS – For personalized directions from the School of Information Sciences try the **Personalized Accessibility Map (PAM)** located in the SIS lobby. The Personalized Accessibility Map (PAM) is an interactive map service that supports wayfinding by people with disabilities. The service can provide information about locations of accessible entrances to campus buildings and points of interest and can find accessible routes, shortest routes, and best shuttles between any given pair of buildings. While designed primarily to support the wayfinding of people with disabilities, PAM can be used by everyone and is accessible through mobile devices, desktops, and kiosks. PAM is a project of the Geoinformatics Laboratory in the School of Information Sciences at the University of Pittsburgh.

Points of Interest

Carnegie Museum of Natural History and Museum of Art www.carnegiemuseums.org
4400 Forbes Avenue, across the street from University of Pittsburgh Heinz Chapel
Monday, Tuesday, Wednesday, Friday, Saturday 10:00-5:00; Thursday 10:00-8:00; Sunday noon-5:00

Carnegie Museum of Natural History is a place of adventure, discovery and education that welcomes everyone to enjoy the wonders of its collections and exhibitions. Founded in 1895 by Andrew Carnegie, the museum has maintained an international reputation for its ongoing research and discovery that create a better understanding of the history of the earth and its inhabitants. Today, the museum is ranked among the top five natural history museums in the country and features 20 exhibition halls including the blockbuster *Dinosaurs in Their Time*.

Carnegie Museum of Art Special Exhibit
Faked, Forgotten, Found: Four Renaissance Paintings Investigated

JUNE 28, 2014 - SEPTEMBER 15, 2014

HEINZ GALLERY C - CARNEGIE MUSEUM OF ART

Modern technology—from X-rays to Photoshop—is not restricted to "CSI"-style crime labs. Faked, Forgotten, Found showcases conservators' forensic analysis of five Renaissance paintings in the museum's collection that have undergone significant scientific analysis and conservation. The discoveries about each work are presented through extensive multimedia documentation, highlighting a fascinating but little-seen aspect of museum practice. Learn how curators and conservators discovered a portrait of Isabella de Medici attributed to Alessandro Allori beneath the surface of a work repainted in the 19th century, or how to tell the museum's genuine painting by Francesco Francia of the Virgin and Child apart from later imitations and copies. The exhibition offers a behind-the-scenes perspective on the fascinating intersection of art and science taking place in the museum every day.

This exhibition is organized by Lulu Lippincott, curator of fine arts, and Ellen Baxter, chief conservator.

Phipps Conservatory www.phipps.conservatory.org

Schenley Park, Oakland

Open daily 9:30-5:00 and 9:30-10:00 on Friday

Awaken your senses. Immerse yourself in 17 distinct botanical experiences. Encounter something of the secret life of plants. And glimpse one of the world's greenest public gardens. Phipps Conservatory and Botanical Gardens, a great steel and glass Victorian greenhouse, has been inviting visitors to explore the beauty and mysteries of plants since 1893. Set amidst one of Pittsburgh's largest greenspaces, Schenley Park, Phipps Conservatory stands as a cultural and architectural centerpiece of the city's Oakland neighborhood.

In recent decades, Phipps has evolved into one of the region's most vibrant, thriving cultural attractions, bringing fresh perspectives and artists into our historic glasshouse environment. Phipps has also become a strong advocate for advanced green-building practices, sustainable gardening and a new environmental awareness.

Senator John Heinz History Center www.heinzhistorycenter.org

1212 Smallman Street, Strip District Open daily 10:00-5:00

From the pre-revolutionary drama of the French & Indian War to the legendary match-ups of the Super Steelers, discover 250 years of Pittsburgh history at the Senator John Heinz History Center. An affiliate of the Smithsonian Institution, the History Center is the largest history museum in Pennsylvania. The 275,000 sq. ft. museum - recently named "Best Museum" by the readers of Pittsburgh Magazine - features six floors of long-term and changing exhibition space, including the Western Pennsylvania Sports Museum, a dynamic museum-within-a-museum, and the Library & Archives, an extensive scholarly resource documenting 250 years of life in Western Pennsylvania. Vinaigrette

The Andy Warhol Museum www.warhol.org

117 Sandusky Street, North Shore
Open Daily 10:00-5:00 and 10:00-10:00 on Friday

The Andy Warhol Museum is a vital forum in which diverse audiences of artists, scholars, and the general public are galvanized through creative interaction with the art and life of Andy Warhol. The Warhol is ever-changing, constantly redefining itself in relationship to contemporary life using its unique collections and dynamic interactive programming as tools.

The archives include Warhol's working materials and source materials (such as photographs, newspapers and magazines); his personal collection of thousands of collectibles and ephemera; 608 *Time Capsules* (dated collections of material from the artist's daily life); the full run of *Interview* magazine; approximately 4,000 audiotapes; and scripts, diaries, and correspondence. These materials are available to the public and scholars in the Archives Study Center by appointment. Film screenings, live music, performance, lectures, symposia and workshops are offered on a regular basis.

The Mattress Factory Art Museum www.mattress.org

500 Sampsonia Way, North Side

Tuesday - Saturday 10:00 - 5:00; Sunday 1:00-5:00

The Mattress Factory is a museum of contemporary art that exhibits room-sized works called installations. Created on site by artists from across the country and around the world, our unique exhibitions feature a variety of media that engage all of the senses.

The museum's unusual galleries are located in three creatively reused buildings on Pittsburgh's historic North Side. The buildings house a growing-and distinctive- permanent collection, featuring artists James Turrell, Yayoi Kusama, Greer Lankton, Winifred Lutz and Rolf Julius, as well as innovative exhibitions that change throughout the year.

The Frick Art & Historical Center www.thefrickpittsburgh.org/index.php

7227 Reynolds Street, Point Breeze

Tuesday - Sunday 10:00-5:00

Experience the culture and refinement of the Gilded Age at the Frick Art & Historical Center, located on beautifully landscaped gardens in Pittsburgh's East End. The museum and its multiple collections are the legacy of Helen Clay Frick, daughter of Henry Clay Frick, one of America's greatest industrialists and art collectors. Here, one can view fine and decorative arts and artifacts, magnificent exhibition and vintage cards and carriages, take part in educational programs and concerts, enjoy fine dining and more.

Carnegie Science Center www.carnegiesciencecenter.org/visit/

One Allegheny Ave., North Shore

Sunday – Friday 10:00-5:00; Saturday 10:00 – 7:00

Experience four floors of **interactive exhibits**. See an **Omnimax** movie on the BIGGEST screen in Pittsburgh! Explore the galaxy without ever leaving the North Shore at the **Buhl Planetarium**. Watch hair-raising **live shows** and discover an array of **programs** for the whole family!

The Duquesne Incline www.duquesneincline.org

1197 West Carson Street, South Side/Mt. Washington

Monday – Saturday 5:30am – 12:45am; Sundays and Holidays 7:00am-12:45am

Take a step back in time on a century-old cable car and see the best views of downtown Pittsburgh while riding one of the few remaining inclines in the country. Opened on May 20, 1877, the Duquesne Incline was rescued and restored by a group of local residents in 1963 and still delights residents and visitors with its original, elegant, wooden cable cars. Now you can visit the interior of the incline and watch the machinery while it operates. The Duquesne Incline's upper station houses a museum of Pittsburgh history, including photos and a storehouse of information on inclines from around the world. Unusual Pittsburgh souvenirs, maps and photos can be found at the gift shop.

National Aviary www.aviary.org 700 Arch Street, North Side Open daily 10:00-5:00

The National Aviary is America's only independent indoor nonprofit zoo dedicated exclusively to birds. Located in West Park on Pittsburgh's historic North Side, the National Aviary's diverse collection comprises more than 500 birds representing more than 150 species from around the world, many of them threatened or endangered in the wild.

The National Aviary's large walk-through exhibits create an experience unlike any other – an intimate, up-close interaction between visitors and free-flying birds, including opportunities to hand-feed and meet many species rarely found in zoos anywhere else in the world.

As an environmental organization composed of educators, conservationists and researchers, the National Aviary's goals are many. The Aviary aims to provide outstanding education programming for varied audiences; present the highest quality family recreational experience that a zoological institution can offer; save endangered species by preserving natural habitats; continue endangered bird breeding programs and conduct meaningful avian research; engender a sincere appreciation of nature and a respect for natural law; and instill a conservation ethic that teaches our immense responsibility as stewards of the planet.

The Pittsburgh Zoo & PPG Aquarium www.pittsburghzoo.org

7340 Butler Street, Highland Park Open daily 9:30-6:00

One of the few major zoo and aquarium combinations in America, our 77-acre facility is fun and excitement from beginning to end. Enjoy meeting Amur tigers, Komodo dragons, African lions and elephants, stop by the Tropical Forest and PPG Aquarium. Water's Edge features two underwater tunnels. Experience the thrill of a polar bear swimming above you in the underwater polar bear tunnel, watch our sea otters play, and go nose-to-nose with a sand tiger shark. Be sure to stop by Kids Kingdom for even more fun
